Hi,

Can anyone tell me what's in this Mega ST ??
I suppose it's an accelerator, but QuickIndex doesn't show a better

speed than a normal 8MHz ST.
Is there a software to activate this clock?

http://pagesperso-orange.fr/gtello/megast.png

Guillaume.

That's the "blitter fix" - a patch that was fitted by Atari to avoid crashes with certain series of blitter chips.

If you have no blitter, or if the blitter does not have the problem, the PCB can be completely removed, but you have to re-attach one PCB trace (on bottom side of PCB, somewhere under the CPU) that was cut when adding the fix.

cu

How can you tell if your MegaST has the bad Blitter?

Is there a certain program that you can run?

Also, were there any problems with Grounding on some of the
MegaSTs?

If so, any trouble spots/fixes would be helpful.

Barry

I've a few Atari Falcon 030 items for sale.
And some ST/e games and applications.

Atari Falcon 030 Memory Boards
----

1 Factory 4 meg Memory Board like new $39.99.

1 Ram Gizzmo 14meg Memory Board like new $84.99.
(simple to install, just remove your old
1 or 4meg board and plug in the Ram Gizzmo and
get 14megs of Memory!!

1 Factory 1 meg Memory board for Atari Falcon 030 $29.99
Nice to use for Faster bootup if you have a Falcon upgraded
to run on other Memory.

Atari Factory Monitor adapters.
----

1 New in Box RGB monitor adapter for Atari Falcon 030. $19.99.
1 Used RGB monitor adapter for Atari Falcon 030. $14.99.

1 New in Box VGA monitor adapter for Atari Falcon 030 $24.99.
1 Used VGA monitor adapter for Atari Falcon 030. $17.99.

Atari Falcon 030 Factory Box, Like New in super nice condition. $19.99. Great for collectors, will add value if selling your Falcon on E-Bay/etc.

Atari CDs and Software

Bird of Prey CD Like New $9.99
All Things Falcon CD Like New $9.99
Crawly Crypt I CD Like New $9.99
Crawly Crypt II CD Like New $9.99
Atari Compendium CD Like New $9.99

Atari Falcon Misc Hardware

Factory Original Internal Speaker $19.99.
Factory Like new Power Supply $69.99.
Factory used working Power Supply $39.99.

Atari ST Games/Applications/Etc Software on Disk

I've alot of used ST/e games and applications.
All are original disks, with manual and box.
If you are looking for a specific game or software title, e-mail me as I may have it and will try to give you a reasonable price.

I have one like new BlowUp Hard External Screen/Video enhancer for the Atari Falcon 030. Comes with Disk Software and paper docs/manual. I got this new and haven't used it as I have a ScreenBlaster II which is almost the same thing. Plugs into your Monitor port and allows higher Screen Resolutions On S\VGA and RGB. Mainly for VGA SVGA, MultiSync monitors. Has pre-set resolutions to use or you can setup and save your own! Will easily do 800x600 in 256 colors and much higher.

Its a very Clean way to get Better Screen Resolutions on your Falcon without doing a internal upgrade.

This is a hard item to get, (at least for me) will sell for $129.99 or may trade to some Atari Item(s) I could use.

Wanted List

Looking for a VME ethernet board for MSTE.

Adapter board for connecting a Nova/SuperNova Graphics Card to a Falcon. Or if someone knows a DIY fix, e-mail or post please.

Has someone got a list of available ways to connect ST/E-Falcon to the Net thur a LAN system and or Cable Modem?

I'd like to gather some info on the ways it can be done, any links or etc
would
be of help.

Accepting Cash or US Postal Money Orders only at this time.

If you are overseas and want to buy something, try working something
out with a trustworthy friend in the US to get payment to me
and I'll ship directly to you or your friend.
Must have payment first.
Also, I do not rip people off, it would not benefit me to do so, I'm
not made that way.

If there is something here you want, e-mail me and we'll see what we can
do. I try to be flexable as I can when selling anything.

phantomm_1 <phantomm@suddenlink.net> schrieb:
> How can you tell if your MegaST has the bad Blitter?

First check if it has any blitter at all ;-)
I think there were lists in the german chips&chips hypertext. Other than
that, you could probably just try if it is stable without the fix.

If you do not need access to the CPU pins to install some upgrade, just
leave it as it is.

If you do want to upgrade the machine, simply throw out both the fix and the
blitter. Optimized VDI code (like NVDI) is actually faster than the blitter,
so this is no real loss, especially if you install a CPU upgrade.

> Also, were there any problems with Grounding on some of the
> MegaSTs?

None that I remember. Do you have problems with the machine?

Yes, the blitter is present!

So this could be a blitter "fix" ?

Guillaume.

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's almost 700, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by webmasters adding the HTML code

```

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package	#	Architecture
aranym-0.9.9.linux.x86_64.rpm	214	AMD64
aranym-0.9.9.linux.ix86.rpm	411	ix86
aranym_0.9.9.linux.amd64.deb	74	AMD64
aranym_0.9.9.linux.i386.deb	158	i386
aranym-0.9.9-cygwin.zip	1102	i386
aranym-0.9.9-macosx.dmg	619	Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz	195	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (857), Windows (1102), Macintosh (619) =3D total 2773.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is a minimal distribution of <http://aranym.org/> designed for GNU / Linux, Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

I have a MegaST here that I've been tinkering with.
I have a few upgrades that I can install, one being a JRI Genlock.
I also have a large board that I bought from e-bay some time ago,
It was advertised as being a Memory upgrade board, I'm not sure
what it is. It's a very long board that plugs into the mega board expansion
socket and has a port that goes out to the back of the mega where the little
slide door is. It's a 9 pin connection.

The board has ATR-4CP Rev A3 on it, also Image Systems Corp. 1989
Made in USA.

There is also a 64 pin connection on top of the board.
There are alot of chips on this board.
The only square socket chip is labled Bt Bt454KPJ.
I notice a 65mhz clock? on it, also has 2 empty sockets. One large
Square one with a small one next to it. The large socket has round
type holes, looks like for a chip with round pins fits into it.

It also has a 6 pin wire connection and came with a cable that fits
it.
I didn't get any instructions with it, but was advertised to me as a
large Memory upgrade board.

I was told it came out of a MegaST and did work.

I'd like some info on it, what it actually is and does do.
I can provide pics if that will help.

Also, a question regarding the MegaSTs Video Shifter Chip.
When putting one in the MegaST, does the writting on the chip
look upside down when compaired to the other chips around it?

I'm not sure if the socket for the shifter is put in backward or not
going by the Pin 1 Notch on the socket and chip.

I don't want to put the chip in the wrong way, in other words.

Barry

The Atari Music Network is inviting you to join the Vintage Digital
Music Revolution! If you're an 8-bit chip musician or vintage MIDI
synthesist, you can promote your music here for FREE with a
professionally designed profile page!  This is your chance to get your
music noticed as AMN embarks on a mass marketing campaign to various e-
zines, record labels, concert promoters, blogs and websites.  So bust
out those 0s and 1s and get your Atari inspired music into the
spotlight - this could be your big break!

It's a graphics card, but I don't know anything about it.

We only have one copy of Issue #31 so far. We need all other disks,
plus another "independent" copy of #31 would be good so that I can
verify the existing image.

As per the Wonder disks, I saw some, not all, at http://stos.atari.st/wonder.html

Greetings,

I have a Unitor II cart and a Log 3 cart.
also, have original Notator and Cubase Audio packages.

Regarding the Unitor II cart, it has a Multi-port on it,
what can this be used for?

I'd like to read some examples of anyone who used or uses the
Unitor II for SMPTE  and anything regarding the Multi-Port.

I have a Original MusiCom2 Software package.
Which I've used in the past for sampling.

There was suppose to be a hardware box availabe
for it, I've never seen a pic of it. Does anyone have
this box and could e-mail me a pic of it?

Also if you have one for sale/trade or a similar
DSP box for use with Cubase Audio or other
Music related software, do contact me. I am
interested in buying/trading for one or more.

And, I will trade hardware/software for
atari hardware or software that I'm looking for.

NVRAM

Which pins on the NVRAM chip does one need to
connect a external Battery to, in order to fix the
weak or dead battery problem.

I've a Falcon here that I use for testing various modifications
on.
My NVRAM chips all seem to be the same type, which I
think is known as Type A.

I need to know what the original voltage was of the battery
in the NVRAM chip. And which pins that I can get a
voltage reading from, and for trying a external battery
modification.

Hi comp.sys.atari.st folks! For anyone near Sacramento, California
(or SF Bay Area, and willing to drive one or two hours), we'll have
at least one Atari ST at the following event[*]...

Atari video game aficionados from near and far will host the second
annual Atari Party in Davis, California on Sunday, March 14th.

Atari Party invites the whole family to a day of games, prizes, and
even a little bit of learning. Test your skill with 300 video games on
30 game systems dating as far back as 1975, plus get a chance to win
prizes in a free raffle, learn about the golden age of Atari with a
screening of the documentary film "Once Upon Atari", and experience
the first major motion picture to extensively use computer graphics
with a screening of the 1982 Disney film, "Tron."

Admission is free and children are welcome. Raffle prizes include
retro-style USB joysticks from Legacy Engineering, books from O'Reilly
Media, gift certificates for ThinkGeek.com, and classic Atari computer
systems.

Atari Party is March 14th from 12pm to 8pm at the
Redwood Park Community Building, 1001 Anderson Road in Davis, California.

For more information, visit
http://www.newbreedsoftware.com/atariparty/

[*] It's a 1040STe.

Bill, get the guy to bring some of the really cool STe demo's and games.
There are some really neat ones out there.

I don't know about your Falcon, but on my Falcon and that of several other Cheshunt Computer Club members, the battery had to be connected to wires in the chip itself, after carefully removing the top layer. and not to any of the pins. My chip was marked 48T87 C and Z143906. The battery is a single small lithium cell.

In the end I found it easier to replace the NVRAM chip - they cost only a few dollars. Fitted a socket at the same time so I can change it easier when this chip's battery expires in a few years time. This needed a hole cut out of the shielding above the chip (or omitting that part of the shielding). Keyboard fits over it OK.

Regards, /Peter/

Good news,

I found 4 original ST Log Disks, Issues 32, 33, 35, and 36.

Not sure if I have any more or not.
I just found them took a few snaps of em, I've not
looked at em yet, My 1040STe is setup enough to check
the disks, and will do that this evening or tomorrow.

I have boxes of ST Disks, some are backups of stuff and alot of
those are not labeled. So I have to literally look at each disk to see
whats on it.

I'd planned on going thur each one and make a .MSA disk image or
something similar of each disk.

Would the MSA format be the best for doing this to preserve the
data on each disk or is there a better system for doing this?

Hi,

I have 2 Falcons apart down to the motherboards, One for experiments
and the other one has a problem that I'm trying to fix.

Both have similar looking NVRAM chips, 2nd set of numbers are the same
but top number is different and numbers on top left corner are different.
I've took a snap pic of each, I'm going to try e-mailing them to you.

Pass them around to anyone, who knows something about these.
Just don't post them anywhere without asking me please.

I consider my snap pics, as part of my work.

Anyone who uses a Falcon or does work on chips like this and
wants to see the pics, just e-mail me and I'll e-mail them to you.

thanks,
Barry

Greetings,

Is there a general site, where one can post small pics
of Atari related stuff and also post a question or comment?

If not, I think it would be a good idea for someone to start
one. So that we can share and show pics of general interest
and or problems.

I don't mean a FTP site, just like a Web Page, something
like Cjoint does.

I have some pics I'd like to share, and some questions about
hardware that would be better understood if I could show you
a picture.

It's just a idea that I have.

I have like new the following ST games for sale.
These are hard to find and the only ones I have left.

ORGE- like new in original box with everything. Pics available

AUTODUEL- like new in original box with everything. Pics available.

Both of these games are in really nice condition.
Price is $24.99 each.
I've seen these games priced well over $40.00 each on E-Bay before.

Also, Two Really nice Electronic Novels from Synapse and
Brouderbund. These are rather rare. The disks are labeled for

the 520ST.

MINDWHEEL- Original HardCover Book with book cover and original Disk
software.
and
ESSEX- Original HardCoverBook with book cover and original Disk software.

No Box with the novels but are in very nice shape even the book covers are
in
good condition for their age. Pictures are available.
I'd like both Novels to go to one home.

Both Novels with original software $37.99.
Which is a excellent price considering how rare these are.

I also have some InfoCom Adventures original with all the items.
If you are looking for one or more e-mail me the title(s) you want
and I'll check and see if I have em. I'll give ya a good price on
these.

Looking for a game or application/utilitie for the ST/e or Falcon.
e-mail me your want list. I'll provide pics if seriously interested.

E-mail me at phantomm@suddenlink.net
or the one below if you have trouble with the 1st one.
phantomm@bellsouth.net

All the NVRAM chips I have seen are basically a RAM chip with a large plastic cover and cell underneath. If you don't prise the plastic cover off the flat Cell (a battery should really have more than one cell) will drag the output of you good cell low. So I suggest that you prise the top off and remove the flat cell. You will then see what voltage the cell and what pins it needs to be connected to....

Hi everyone,

my question is in the title. I cannot find what's the difference
between a 1040STF with orange disk drive LED and one with a red one...

Any ideas? And where did you find this information? What's a good repository for such info

Thanks!

As I was playing around with my Atari the SC1224 monitor just stopped working. No smoke, no indicative smell of burn just a black screen and NO sound when loading a game which typically plays sound. I tried the Atari on a friend's machine and it works fine.

I searched online but couldn't find anything useful other than a couple of mentions that the GoldStar made SC1224s suffered from a dead thermistor (TH901). (BTW TH902, a big black plastic box next to the fuse, looks scratched up and not firm when I push it. What exactly is that thing?) I don't know if there's a way to test a thermistor to see if it's dead (can I test it like a regular resistor?) but if someone knows the value, then I can buy a replacement and test. Other than that, any hints as to the common failures of the SC1224s and if there's anything else I could check? And why isn't sound working at least?

And a note: when powering on the screen I can hear the typical CRT "tsk" noise which I believe it from static electricity around the

screen or degaussing? Not 100% sure, but what I'm trying to say is
that it sounds like the high voltage stuff works.

Thanks in advance for any help

But the STF floppy LED is on the keyboard, not the drive...

Are you sure that the one with an orange LED is a STF and not a STFM? I
have not seen many STF's, but all I've seen has red LEDs. I have never
seen an STFM with red LEDs.

  Now, this is really 'something extremely' important  :-)
Why not Googling a little. For sure there is a lot of sites
specialized about this .

 My answer is:  one is manufactured when orange color was 'in', and
other ...  you know  :-)

  PP

P.S. before making any final conclusion about this, for humanity very
crucial issue try to open cases, and check are both LEDs original.

Yes. It is basically a resistor whose value changes as the temp. goes
up or down. It can be used to limit the switch-on surge. As it heats up
it will allow more current to flow. As a WAG, if you can detect signs
of life (you might also be able to see the CRT filament glowing) then
it is most likely not down to this or your mystery black box.

Hmm, maybe there's a dodgy plug on the end of the video lead, or the
lead itself is faulty?

EASY !

- The RED led is the first motherboard generation with ROM under the PSU :
1986--1987
- The Orange led (and green for power) is the second generation mb with ROM
under the left of the keyboard (and a BLITTER place : socket to be soldered
!).
1987--1989

Sure if somebody exchanged the keyboard, the rule is wrong ;-)

Regards

I've been away from my Atari ST gear too long, but...

Is there *not* a way (via a converter circuit) to connect a VGA
monitor to an ST??? ISTM that it would be a sight easier to lay
hold of a VGA monitor that to find a *replacement* for the SC1224...

... that is, if the original poster is unable to fix his monitor.

Probably ;-) Wasn't the problem actually finding a monitor that would
sync to the Atari?

Only certain monitors had the right sync rates in either. I forget which (Sony I think) but one multisync could do both with a simple switchbox built into the cable. The ST had to be turned off, the switch set, and then the ST re-booted.

I have 4 ST's (all upgraded to 4 megs and 1 with a 16mhz accelerator), 4 monitors, 4 hard drives, and a genuine Atari CDAR sitting on the shelf that haven't been started up for years. I really need to break some of this stuff out one of these days.

Multisyncs could handle all Atari resolutions (well some could). Another
solution is a LCD TV with VGA input. Run composite to the AV input and a
VGA/ST converter into the VGA input. Then all you need is a switch on
the VGA converter to disable the hi res monitor detect line. Voila,
instant modern multisync. ;-)

I know how you feel, I have 2 Falcons (1 with a CT2), a TT030, MegaSTE,
Ste, 6 STFM's, a 130XE, 2 800XL's, a 600XL (64k), a XEGS, a Jaguar, a
Lynx and a Portfolio. And to think my Wife calls me nuts. ;-)

I do have the MegaSTE and the stock Falcon on my desk tho, just not time
to use them.

>Probably ;-) Wasn't the problem actually finding a monitor that would
>sync to the Atari?

That used to be the problem - only Multisyncs would work as the Atari video was to PAL or NTSC TV standards using a 15.x kHz line rate. Most computer monitors started at 30 kHz, so the converter would need to be a line-doubler. However, some modern flat screen monitors double as TV receivers, and most include frame stores since their display is sequential rather than TV's interlace. These may well accept the Atari's input signal, specially if they have a SCART socket.

Regards, /Peter/

LS

There is a new version available on my homepage (see sig)

Only 1 bugfix.

A zero pointer dereference.

This did not much harm and was not detected on a 68040,
but causes a miserable crash on 68030.

Happily I did not trash my precious TT.
Dont trust software from Milan only users :-P

Awesome! That's what I wanted to know (I had a hunch but nothing found
on Google - nice try wise-ass-PP: but you know if I'm posting on
newsgroups I've already gone through Google).

As for my 1040STFs, I'm not sure if the LEDs where changed, but in one
both power/floppy (yes I know the stupid LED isn't on the floppy

```
itself - stop being pedantic folks) are red, and on the other they are
green (power) and yellow/orange (orange to me anyways)

So, does it mean that one can add a blitter to a 2nd gen mobo? (of
course on can, but will it work is what I really mean)

BTW, you rock Rodolphe! (CT060, etc.)

Right, so as I was saying, I want to try to figure out the problem with my SC1224. I don't want a VGA/multisync monitor, nor a flat panel display (for those, this would be helpful:
http://www.retrocomputing.net/parts/atari/1040STF/docs/connettore_monitor_st.htm)

For far I found these links a tiny bit helpful:
http://groups.google.com/group/comp.sys.atari.st/browse_thread/thread/e49151f085ad96c8/69ee56414b59ac29?lnk=gst&q=dead+sc1224#69ee56414b59ac29
http://groups.google.com/group/comp.sys.atari.st/browse_thread/thread/5080d4f737d22c20/a5aeda733c7d302b?lnk=gst&q=rex+hebert#a5aeda733c7d302b

Unfortunately it's hard to understand people on the net these days, because they stopped using grammar rules and writing properly (just contrast the usenet postings above with the brain numbing "rivers of words" below:
http://www.atari-forum.com/viewtopic.php?f=15&t=2117&hilit=black+screen
http://www.atari-forum.com/viewtopic.php?f=15&t=10579&p=84525&hilit=goldstar#p84525

Anyways, from the little bit that I "got", and from reading the venerable electronics repair FAQs:
http://www.repairfaq.org/sam/tvfaq.htm
http://www.repairfaq.org/sam/monfaq.htm

I realized that there's no high voltage. There's a squeal when the screen turns on, but it seems to be coming from the PSU. The filaments don't light up and the voltages on the back of the tube are in the 50v range instead of the 100+v range (I tested with a working SC1224). Furthermore, I replaced the PSUs and the dead one wasn't Lazarus... So it seems the problem is not in the PSU (and thus the infamous thermistor - which I tested with a hair-dryer and cold-spray and it seems to work, although the range was a bit "off" from the working SC1224's TH901 thermistor). From partial decoding of the cryptic texts in the atari-forum I'm thinking that maybe it is the LOPT/flyback, but I'm not entirely convinced. I guess I have to measure more things to come to a better conclusion. If anyone can give some pointers here, they'll be appreciated.

Thanks

Been there, done that. The problem is that the frequency-setting capacitor is on the top of the board, next to a heat sink, where it bakes. And when it does it kills the flyback.

When you replace both those things, put the cap on long leads, to the bottom of the board, and toss it up front under the monitor face.

The flyback and cap should be able to get from BEST Electronics. That is from fixing a 124, not a 1224. Anyway, if you get a new flyback transformer, get the flyback capacitor, too. Check e-bay. Last I looked a 1224 was selling for 40 dollars.

Adding a blitter might be possible on any ST, but there's no space reserved for one on the STf/STfm mainoards AFAIK - if you want one, my advice would be to get a Mega ST or (Mega) STE. The changed LEDs were due to dropping LED prices - red LEDs were significantly cheaper in 1985 to 1986 or 1987, afterwards other colours were available at similar prices and green and yellow simply looked more modern than the (then) all-too-common red ones.

And BTW, the blitter isn't used by too many programs anyway, and if you want to speed up GEM: replacing the VDI with the RAM-based NVDI is much easier and has a much greater effect (NVDI 3 is sold very cheaply on hood.de and occasionally on eBay and even comes with TrueType and Speedo font support).

Hi Jim,

thanks for the helpful reply.

On Dec 17, 5:06=A0pm, Jim DeClercq <j...@panix3.panix.com> wrote:
> Been there, done that. The problem is that the frequency-setting capacito=
r
> is on the top of the board, next to a heat sink, where it bakes. And when
> it does it kills the flyback.

Dl you mean the capacitor that's at the top-left of the motherboard
(looking top-down), that's inside the flyback's protective shielding
(doesn't look much like a heatsink, not at the top-left corner
anyways). Or do you mean the big ol' capacitor that's directly to the
south of the flyback and indeed close to the heatsink that's got the
HOT attached to it?

And just to make sure, we're talking about the electrolytics here, right? Because I also see some ceramic ones in the vicinity.

What I just don't understand is why I get no sound out of the monitor... I mean, the Atari is indeed producing sound (I tested this), and I also tested the voltages that come out of the main PSU and go into the sound circuit. It puts out almost 18v. Then the next leads over to the left are putting out 16v. (not sure what the nominal voltages ought to be - according to the post below he's expecting them to be 24v and 12v) Finally the left-most that feed the HV circuits start at 117v when the HV is disconnected, but get pulled down to ~55v when the HV circuits are connected. This is very similar to what these other posters found out:
http://groups.google.com/group/comp.sys.atari.st/browse_thread/thread/5080d=
4f737d22c20/a5aeda733c7d302b?lnk=3Dgst&q=3Drex+hebert#a5aeda733c7d302b
http://groups.google.com/group/comp.sys.atari.st/browse_thread/thread/c67bd=
bcb5d718227/32b29709ff03f7e6?lnk=3Dgst&q=3Dsc1224+voltage#32b29709ff03f7e6

But neither of them says what the real problem was... So it seems it's something common enough, if they're getting similar behavior.

Lastly, there's a buzz coming out of the PSU when the HV circuits aren't connected. It almost goes away when the HV is connected to the PSU.

Thanks

I think used the following:
void jmpa6(void) {0x4ED6;}
I have added your code to the 4.01 source I have..

(With the b6) There still seems to be an issue with AHCC finding
files, it is a case thing

I am using AHCC from FAT drive C: (supports: upper case only)

The TeraDesk folder is on a MINIX partition E: (supports: upper case
and lower case and mixed case)

When the file names are all upper case as from the zip, AHCC cannot
find the Project files listed at the bottom of the DESKTOP.PRJ file,
when these are rem'd out, it cannot find the .C files.

When it says the files it cannot find, it always prints them in lower
case.

When all file names are lower case (in the file system), the files are
found (ARAnyM hostfs: lower case)

Compiling "btst.s" causes a crash, XaAES outputs:

```
pid 66 (AHCC): BUS ERROR:
User PC=163C856, Address: 0
(basepage=160E000, text=160E100, data=16519E8, bss=1663BB2)
```

The test system is EasyMiNT 1.70 for ARAnyM (ZIP from EasyMiNT page,
uses MiNT 1.16.3)

I will try the same AHCC and source tree using standard AFROS setup

(confirmed, same problems)

Paul

If you want to get it fixed, I would try either B&C Computers or
Best Electronics. I think it would be cheaper just to buy a new.
I have seen plenty on the Web for sale, so as cheap as $30...

There you are.

All filenames, both in project file and #include in the source
are lower case. Works on TOSFS.
Works also on case sensitive or case preserving file systems
but only of course if all relevant filenames in the fs are lower case.
Mixed case makes things unpredictable.

I use a ZIP drive for transfering AHCC et al to my Linux box
to a case sensitive fs.
I can configure mount to treat all filenames on the ZIP as
lower case. So that is what I do.

I will try using the TOS drive again. I do know that case is an issue
when using MONST, but that it does work with a MINIX partition. (maybe
that is just a long filename issue)

I will try a test with the lower case file names on the MINIX, and the
EXT2, but from what you say, they will work..

so your telecoms program says you have type a character.
```

In this instance what you could do is run a BBS type software on the Falcon so you can see if you are connecting.

Alternately (same as null modem on DOS/WIN) run a telecoms program on the Falcon (and picocom on linux), if it displays the key you typed on the opposite machine, then you are in business

> I try this on Kubuntu linux distribution, but I have heard that OpenSuse
> is better.

this is irrelavent, because it must work at console/terminal level first.

> The question is:
> Does Somebody experience to use internet via null modem cable, or maybe

quote: "A simple way to convert a serial line to SLIP mode is by using the slattach tool."
http://www.faqs.org/docs/linux_network/x-087-2-slip.operation.html
http://linux.about.com/library/cmd/blcmdl8_slattach.htm

This is a replacement for Patrices PPPD method, and not useful if you cant get the serial port on the usb working

> Do you know what can I do ?
>
> Thank you for all
>
> best regards
>
> Piotr Mietniowski

what both these options presume is that you have a working RS-232 interface on the linux side. The easiest way to do that is to connect to a modem. When you can do basic modem requests (ATI0: capital a-tee-eye-zero)

At the end of the day, you need to make sure that BOTH sides your null modem are setup the same (the RS-232 parts) otherwise no reliable communication will happen, this is easily done with telecoms program on each end.

The setting should be something like 8, none, 1
7 or 8 - number of bits used to transmit data
none - parity bits, only useful on modems
1 - number of stop bits

The other important setting is speed, Patrice go it working at 115200 once that is working, then follow the instructions on Patrice Mandin's webpage

You might want to check out the types of null modem cable also:
http://www.lammertbies.nl/comm/info/RS-232_null_modem.html

for getting the setting right, try some of the following
windows: http://www.lookrs232.com/help/commport_settings.htm
linux: http://www.ibiblio.org/pub/Linux/docs/HOWTO/other-formats/html_singl=
e/Serial-HOWTO.html#set_serial

your linux side should be done with:

```
# pppd -detach crtscts lock noauth local 192.168.0.1:192.168.0.2 /dev/
ttyUSB0 115200 &
```

From what I can tell, this should be enough to get things working (pppd must have its own 8,none,1 settings), but you should read ythe following concerning your convertor:
http://www.mjmwired.net/kernel/Documentation/usb/usb-serial.txt

"Virtual COM port (VCP) drivers cause the USB device to appear as an additional COM port available to the PC." (has linux drivers)
http://www.serialgear.com/USB-PRODUCT-DETAILS.cfm?sku=3DUSBG-232&catid=3D46=
1&cats=3D461

Hope that helps a bit, setting up RS-232 is not a common thing anymore, experience getting a USB one working is even less common, but the above should help as long as you can get the devices set up properly. The virtual com port will probably be named different from the USB port, it one is used on linux. Read "usb-serial.txt" to find specific drivers..

Paul

Version 4.02 of TeraDesk open-source desktop for the 16-bit and 32-bit lines
of Atari computers is available at:

      http://solair.eunet.rs/~vdjole/teradesk.htm

This release fixes undesired behaviour that was observed when a mouse
button was held pressed for a long time. Also, a couple of small
optimizations were done and some adjusments were made to make TeraDesk
compile correctly in AHCC.

Have fun.

Djordje

Talking to myself again. Top posting too. Google Weather Underground, or
wunderground, and they have a XML feed based on zip code. Should I ever
find time to work on this, it seems a better source. And, you can see what
is there. CAB works for this.
Jim

Hi,

ARAnyM 0.9.9 <http://aranym.org/> runs the ATARI machine
supported on any computers' host systems. The *miniPack* a
minimal distribution <http://eureka.atari.org/miniPack.zip>
was updated according to TeraDesk v4.02 release. It supports

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =3D)

If anyone is using Bob Areddy's program to set system time on an Atari,
the Washington DC number is dead, and what is left is Colorado and Hawaii.

```
I changed both possible files to 1-303-494-4774, all run together into one
number, and it works. That is Colorado. Hawaii is 1-808-335-4721.

Has anyone seen Bob lately? Long ago, he worked at Tower Computer on 14
mile in Warren, MI.

Nice work Djordje :-)

A question about changing resolution on some poor ST(E) : it seems
that only way is via editing XaAES.inf file and reset. Teradesk
Video settings fixes 16 colors for med. res. and can not set to 4.
Is it because must so, or is not implemented, perhaps bug ?

PP

Hi,

Has somebody here tested it on CT60 ?

Thanks

And to you too, Rudolph. My Atari's still get a little work, but not
enough to satisfy me unfortunately. This year is looking better indeed, tho.

Happy new year.

Mark

Hi,

phantomm_1 wrote:
> Anyone still using an Atari based stuff for Music stuff these days?

Sorry, no website but me, too. :) Though I'm not frequently writing to the list I'm constantly reading it and do post sometimes at atari-home.de

Actually I'm using Cubase on Falcon for several years now and got it synced to several audio workstations in the meantime. Back in the days I used to use a Windows DAW called n-track. Later came Ardour on Linux and now I have it hooked up with a AW4416 which is a digital mixer with built-in audio recorder. MTC/MMC works wonders and it's great to have Cubase play the synthesizers in sync to the audio recordings.

> Also, any real Atari users from the old days still going?

IIRC I started with ATARI sometime around 1992 and am still using it. So I would consider myself to be from the old days. :)

> I know most of us have modified our own equipment,
> just curious if there is still a demand for Atari based software,
> hardware, music and the like?

Of course there is.

With kind regards,
Dennis Schulmeister

I have been around since the beginning and am still using
an Atari (much to the displeasure of my wife). Right now
I am just using a small Falcon030, but am waiting for the
CTPCI upgrade before I start putting together an upgraded
Falcon system. I am also getting the Coldfire computer. As
far as Midi is concerned, I do not do too much. I probably
when my new systems are up and running. I do have an old
Roldand MT-32 MIDI module which still works great. I have
Cub, Cub lite and Sweet-16 (which is still supported I think).

This is a no brainer. Get the programs from Anodyne Software.
They are the best and work great.

Cool...

I've heard of the ColdFire Project, I wouldn't mind getting one,
but need to find out more about it first.
I'm glad that projects like this are still going on.
I just dont want to spend my hard earned money on another board,
only to find out, that 6 months later, I'll have to buy another one to
have the bug free one.

Where Can I place a order for one?

I have those, just maybe not the latest version.

I do have a different Atari CD Burner Sofware/hardware system
that works great!

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package	#	Architecture
aranym-0.9.9.linux.x86_64.rpm	186	AMD64
aranym-0.9.9.linux.ix86.rpm	364	ix86
aranym_0.9.9.linux.amd64.deb	64	AMD64
aranym_0.9.9.linux.i386.deb	139	i386
aranym-0.9.9-cygwin.zip	530	i386
aranym-0.9.9-macosx.dmg	887	Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz	166	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (753), Windows (530), Macintosh (887) =3D total 2336.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

Ben,

If you insist on sticking with ICD Pro then you are stuck with its limitations. As an IT Pro I see so many tender documents which specify a particular version of software and then ask for work arounds for its limitations. WHY CHOOSE IT IF IT DOES NOT DO WHAT YOU WANT!
I have a pile of Seagate SCSI drives that will only format on my TT-030 with HDDRIVER. The time its saved me has more than covered the cost of purchase. So whilst it doesn't get round all problems it does allow me to use a load of drives that I can't get working with any other program. Its actively supported so if you do have a problem you can e-mail the author (unlike hi-wire!) and get a response.

Dave

I'm Happy with it's limitations, I just need to know which drives I can use
with the ICD Pro? What determines that? Is it capacity?

> As an IT Pro I see so many tender documents which specify a
> particular version of software and then ask for work arounds for its

It does do what I want! I need to know which Drives I can use with it! What
parameters? Is their a maximum capacity?

> I have a pile of Seagate SCSI drives that will only format on my TT-030 with

I have HDDRIVER and I will not use it! I like ICD Pro!

Any SCSI-drive where parity can be disabled by a jumper. Size doesn't
matter, but there might be some limitation the SCSI-adapter. It's quite
likely that you can't access sectors beyond 1Gb with these adapters.

It is not clear what adapters can access over 1GB on ICD site:
http://www.icd.com/atari/index.html#adscsiplus
You need to google little around to get proper answer.
TOS 1.02 has limits: 256MB max partition size and max 14 partitions.
So, it is 7GB, What is more than enough for all SW you can imagine...
Too much capacity ? It will not prevent any adapter to access first
1GB on drive.

So, answer is: there is no maximum capacity in fact (limits are far
beyond than current manufactured consum drives, not to mention older
ones, what are only interesting).
You may have only maximum accessible size on disks, what is usually
1GB with Atari ST ACSI/SCSI adapters.
In any case, you may try, and will see .... (if can not find what ICD
model can accessing over 1GB) .

Another option is (only if can over 1GB) to use DOS partitioning -
then may have partitions of max. 2GB. However, it is not recommended -
you need program BigDOS then, what is not compatible with all Atari
SW, and I remember that there were some problems with it on TOS 1.02 ,
while under 1.04 and 2.06 worked good.
Really don't see the point with so large partitions when SW needs not
so much space.
Only maybe recommended if want to attach same disk sometimes on PC,
for data transfer. But even then, there are some better drivers, which
have TOS/DOS compatible partitions.

Hi all!

Last March I organized an event in Davis, Calif. that I called "Atari Party."
We had over a dozen Atari systems, spanning Atari 2600 through Jaguar, and
over 200 games for the public to come and play:

  http://www.newbreedsoftware.com/atariparty/2009/

I haven't picked a date (or venue -- the public library in town, where
we met last year, is undergoing renovation thru mid-2010), but I've
started planning.

This year I'm thinking of bringing my Sony PlayStation 2, along with
a variety of PSX and PS2 discs I've got that contain Atari games
(e.g., "Activisiton Anthology", "Midway's ... Atari Collection 1")

Would anyone out here be interested in bringing systems & games
this year?

I've personally got 10 systems (including 2 non-Atari devices for
which I've got emulated Atari games: the PS2 and Gameboy Advance),
and 2-3 too few monitors/TVs to display them on. ;)

I've also got about 390 games (about 50 of which are dups; e.g, I have
a Combat cartridge, and my Flashback 2 has Combat).

Sorry if I'm incoherent, it's late and I'm distracted by a movie. ;)

Dear All,

I have question with configuration of Hard Disk and Compact Flash card
using HDDriver on Atari falcon.
My friend have very old Hard disk Quantum GLS127A (2.5 inch).
Information about this disk I found on web page

http://stason.org/TULARC/pc/hard-drives-hdd/quantum/GODRIVE-GLS-127-AT-127MB-2-5-SSL-IDE-AT.html

But still I have a problem is it posibility to change between master and
slave.

When a connect this drive and Compact Flash Card (Kingstom 4 GB)
(connect to IDE port via special converter using 2,5 inch cable, the
HDDriver show only the disk, but I connected only the Card HDDriver
showed when boot the system.

ELITE PRO CF CARD 4 GB ver 2 Direct Access

The problem is because I have not posibility to save it, HDDriver
Install in Hddrutil.app is not active.

Does somebofy know hwat can I do with this ?
Maybe with other disk drive ?

Best regards
Piotrek

Not exactly clear what you try to say...

Usually on CF card adapters is jumper for selecting will it be master or slave.
But you need to try that Kingston first alone, as master. It will likely work not good with Falcon - according to my experiences.
Especially writing (save) is troublesome. Maybe it is the reason why you can not do proper install.
Much better choice is some Sandisk CF card.

In any case, you need first to partition card, update config and only then you may install driver.
What Hddriver vers. you have ?

PP

I noticed that compressed kernel image takes ~400 kb, and wondered
whether it is possible to unpack and run it with mentioned amounts of
ram.
Also, I am not sure, whether Atari STe has described hardware:
from http://www.debian.org/releases/2.1/m68k/install.txt
---
The m68k port of Linux runs on any 680x0 with a PMMU (Paged Memory
     Management Unit) and a FPU (floating-point unit). This includes
the
     68020 with an external 68851 PMMU, the 68030, and better, and
excludes
     the ``EC'' line of 680x0 processors. See the Linux/m68k FAQ
     (http://www.linux-m68k.org/faq/faq.html) for complete details.

     There are four major flavors of supported _m68k_ flavors: Amiga,
     Atari, Macintosh and VME machines. Amiga and Atari were the first
two
     systems to which Linux was ported; in keeping, they are also the
two
     most well-supported Debian ports.
---
also
---
2.3. Memory and Disk Space Requirements
---------------------------------------
```

You must have at least 5MB of memory and 35MB of hard disk. If
you
want to install a reasonable amount of software, including the X
Window System, and some development programs and libraries,
you'll
need at least 300MB
---

So, 5mb of ram is necessary.

Does Atari support old PC style simm memory? In case I can find some.
Is it possible to buy memory for ste online?
Is motorola 68000 in atari ste equipped with ppmu/fpu?

Thank you

Piotrek <mietniow@agh.edu.pl> writes:

: Dear All,

: I have question with configuration of Hard Disk and Compact Flash card
: using HDDriver on Atari falcon.
: My friend have very old Hard disk Quantum GLS127A (2.5 inch).
: Information about this disk I found on web page

: http://stason.org/TULARC/pc/hard-drives-hdd/quantum/GODRIVE-GLS-127-AT-127MB-2-5-SSL-IDE-AT.html

: But still I have a problem is it posibility to change between master and
: slave.

: When a connect this drive and Compact Flash Card (Kingstom 4 GB)
: (connect to IDE port via special converter using 2,5 inch cable, the
: HDDriver show only the disk, but I connected only the Card HDDriver
: showed when boot the system.

: ELITE PRO CF CARD 4 GB ver 2 Direct Access

: The problem is because I have not posibility to save it, HDDriver
: Install in Hddrutil.app is not active.

: Does somebofy know hwat can I do with this ?
: Maybe with other disk drive ?

: Best regards
: Piotrek

This from a TT030 running a generic CF card as a hard drive. This part works. I would suggest trying the 2.5 inch drive separately, first. If there is some other problem with the 2.5 inch drive, try ICD Pro Tools, which does not, I am told, use the complete command set, and may work. It is compatible with the much better HDDriver.

When you have that working (there should be jumpers on the drive, to be done at the other end of its cable) then, by my experience, using a SCSI bridge card and a CF card adapter, any brand should work. But you need to partition it, before any driver will install.

Jim

Why to Hell using SCSI bridge on Falcon, which has own IDE port ?
Not to mention that IDE is 2x faster than SCSI on Falcon - I can get over 3MB/sec with Sandisk CF card, while SCSI may max some 1.5 MB/sec.

And btw. I have bad expereiences with SCSI/IDE adapters. Yamaha for instance works only with normal hard disks, but none of CF cards worked reliable with.

Finally, as I know, ICD supports not IDE drives, only SCSI and ACSI connected ones.

Hi,

It seems there's a problem with the <http://www.atari.org/> subdomains

<http://atari.org/services/subdomains/>

They're all leading to the YesCREW home page. This is quite strange.
May we have news from the ATARI.ORG project maintainer, please ?

Many thanks,

Regards,

FYI - Plans for Atari Party 2010 move ahead!

(1) We'll be screening a movie (if not two!).
So far, the documentary "Once Upon Atari".

http://www.newbreedsoftware.com/atariparty/2010/movies/

(2) We'll be having a raffle, with some prizes donated to the event
by corporate sponsors:

* O'Reilly Media (gaming & retrogaming books)
* ThinkGeek ($100 gift certificates)
* Legacy Engineering (some USB Atari CX-40-style joysticks)

http://www.newbreedsoftware.com/atariparty/2010/sponsors/

(3) I whipped together a cute (I think!) piece of flyer artwork
for this year's party, using a collage of photos from last year
(in the late-1970s Atari 2600 game box art style):

http://www.newbreedsoftware.com/atariparty/oldstyle-web.png

(4) There are a pair of mailing lists you can subscribe to;

one (moderated) for news & announcements:
http://lists.sonic.net/mailman/listinfo/atariparty-news

the other (discussion list) for volunteer coordination & fretting:
http://lists.sonic.net/mailman/listinfo/atariparty

(5) And for the mailinglist-phobic, I've created a Facebook group:

http://www.facebook.com/group.php?gid=280573563703

Hello.

Everyone may not know, there is currently a conquest to find a name for the
future ACP computer. All the details are here:
http://acp.atari.org/

Feel free to send your propositions to:
acpinfo (at) atari (dot) org

Answer quickly, the conquest will end next sunday !

Hi,

The ATARI.ORG servers were transfered to Apache 2, with temporary
miss-redirections that are rapidly fixed up. All's now working good.

Many thanks for the really good service.

Best regards,

Dear All,

I have one simple question about cooperation between eiffel and joystick. I have just observed that plug joystick to eiffel and the button fire not work with some games. For example this game is GODS. When plug joystick directly to falcon, then everything is OK.

Is this OK ?

Best regards
Piotr Mietniowski

Gerhard, you are reading this NG.

I tried to answer your mail about AHCC, but it bounced.

"DNS for host b.maus.de is mis-configured."

I had this problem as well. I think its a bug in some versions of the
Eiffel code. If any one else has a solution I would love to know it...

Dave.

Thanks to MiKRO, zWeather 1.2 is available.

No new features but a couple of bugs have been fixed and, the most
important, now zWeather should get again the datas from weather.com.

Ups.

> "DNS for host b.maus.de is mis-configured."

I ask my Sysop, thanks for the hint.

We can move the group "comp.sys.atari.programmer" if you want.

Something more about AHCC

Can you describe me why I get this error, when I use the header EXT.H?

```
-------------------------------cut-------------------------------
Error in I:\AHCC\INCLUDE\EXT.H L47 bad type modifier to T_ULONG for  : ';'
Error in I:\AHCC\INCLUDE\EXT.H L0 no declarator for : 'unsigned long'
-------------------------------cut-------------------------------
```

Line 47 is:

```
-------------------------------cut-------------------------------
typedef unsigned long size_t;
-------------------------------cut-------------------------------
```

When I replace that line with:

```
-------------------------------cut-------------------------------
#if !defined( __STDDEF )
#include "stddef.h"
#endif
-------------------------------cut-------------------------------
```

it works. But in the I:\AHCC\INCLUDE\STDDEF.H stand also:

```
-------------------------------cut-------------------------------
typedef unsigned long   size_t;
-------------------------------cut-------------------------------
```

Two things I miss in AHCC, at the moment:
In PureC you can define a path for the object file which are make. So they are no between the sourcecode.

It is also possible to load the konfi (cfg) with a menu entry or in the commandline. I have for erery project a cfg file.

Gerhard

Thanks for the AHCC! I hope that someday someone can make a Coldfire version from Phoenix. :-)

Hello,
  This is great news!!!  But when I tried it it does not seem to
load.  I have put the Gemsys folder on C drive and let it replace the
files.  Just to let you know the old zwether was only about 248,000
bytes and this new one was 545000 bytes is that correct?  If that is
not correct then I may have to dig out my old CD's and get LZH
unpacker rather than using the PC to unpack the archive and moving it
over by floppy.  Any thoughts on this one?

Yes, this is it, no need to do anything more. What do you mean "does
not seem to load" ? It hangs? Return to desktop? What environment /
desktop? Loading time with this version is quite long, esp. on 030
machines, it has to load and depack ~50 PNG icons. If you can, test it
in aranym with network, it should works out of the box. And remember,
all Zorro's code is compiled for 030+ and (!) FPU.

> files. =A0Just to let you know the old zwether was only about 248,000
> bytes and this new one was 545000 bytes is that correct? =A0If that is
Yes, it is. All code (incl. libraries) was recompiled with gcc4 (it
produces a little bit bigger binaries in aggressive optimization
modes) plus libxml was updated to the latest version (possible code
increase). zWeather binary itself is stripped and upx-ed, so the
smallest possible size is achieved.

It does not seem to be loading. I am running the latest Magic (6.2 I believe) with Jinnee 2.5 desktop. I am using this on a CT60'ed Falcon running at 95 mhz. It would seem load time would not be that long. A couple of other things noticed, Whenever I open one of my partitions (Hard Drive or CD drive) when I try to move the window it just moves a like an 1/8 of an inch then you have to re-grab the window to move it just another 1/8 of an inch. So you can see that would become very annoying. When I hit CONTROL-ALT-ESCAPE to bring up the processes running I notice that zweather is running but is taking up tremendous amounts of ram. I have 512 mb of RAM and it seems to be taking up most of that. Not sure why. I will look into the CT60 memory usage CPX and see what it reports as used and free ram.

Again this should not be a problem for a 060 running at 95 mhz and built in FPU and PMMU.

OK it seems that maybe I have everything right. But will have to play around with it some more and see what I can get it to do. In the mean time let me know if you have any questions or comments on what could be causing this. I am using an EtherNEC with the 68060 driver from Didier, or at least the CT60 package.

Thanks for your help,
Falcon060

For your TOS 1.2, you have a limit of 256MB per partition, and a limit
of 14 active partitions at one time.  At some point (1.4?  1.62?,
2.06?), TOS was revised to be able to handle 512 MB partitions, and
the Falcon 4.0x TOS can handle 1 GB partitions.  In theory, the drive
itself can be any size; you just won't be able to access more than 3.5
GB (256MB x 14).  It is possible to switch partitions so as to access
more of the drive, but it isn't practical.  You might want to consider
a SatanDisk (why on earth did the guy shoot himself in the foot by
naming it that?), as SCSI drives are nowadays are not the most cost
effective approach.

The SatanDisk has been replaced by the UltraSatan, which is a much
better name :-). They are currently sold in small batches on eBay UK by
the seller "francisvonkesice" (who has a small problem now with PayPal
since he apparently reached the maximum limit for incoming payments ...
- read atari-forum.com for details).

I *learned* so much by using my Atari ST 1040... that even when
working on other machines today, by using that knowledge I am
*still* using the Atari ST.  :-)   Happy New Year!!!

I do have 4 original Atari's (TT030, ST1040, 2xMega4) somewhere on my house but I don't have the place on my computer room to install then.

I still have my dead Hades too. I'm almost sure it can be repaired only I don't know a person who can repair it for me for a reasonable price.

TTFN,
Martin

Hi,
TeraDesk 4.02 works great on my Falcon/CT60 at 100 MHz with MinT 1.16/
XaAES and Magic, too.

Happy new year,
Latz

Oh ok - nice to know you've still got some Atari's - you need to get rid of some less important things to make room, you know, like the wife, kids, dog, cat, whatever... :D

Just kidding!

> I still have my dead Hades too. I'm almost sure it can be repaired only I

Hmm, there should be someone who can do this.

(WEBSITE) http://www.atarimusic.net
(FORUM) http://www.atarimusic.net/atari-music-network

From sequencing Tangerine Dream concerts in the 80's to tearing up the dance floor at the New York Blip Fest in 2010, Atari's reputation as a music monster machine has persisted for a quarter of a century. The secret behind its success is clear: Atari was perfect from the beginning =96 it didn't need to change. For MIDI enthusiasts, the Atari was and still is the ultimate bridge between man, music, and machine. For chiptunists, the Atari offers a canvas of unexplored sonic colors for electronica and 8-bit pop. AMN believes that Atari isn't just about nostalgia; its about utilizing an alternative computer platform for specialized digital music creation.

On Jan 1, 2010, The Atari Music Network (AMN) was launched, marking the beginning of an exciting new era for Atari based musicians and developers by offering news, resources, and an extensive social network area.

The Atari Music Network (AMN) Mission Statement and Features

The Atari Music Network (AMN) aims to:

=95 Stimulate social interaction of Atari based musicians and developers as one global community.
=95 Inspire and support Atari hardware and software developers to update and resell their products or place abandonware into the public domain.
=95 Deliver relevant news, product information, downloads, and hardware support
=95 Provide free marketing for Atari based musicians, albums, and events
=95 Bolster Atari's presence in the 8-bit pop scene
=95 Archive, catalog, and preserve Atari music software for future Atari generations
=95 Encourage the pirating and cracking of ex-commercial software (ethical rules apply)

AMN Currently Features

=95 Discussion Forums: The Heart of the Atari Music Community
=95 Worldwide Ebay Power-Searches: Dozens of Predefined Atari Hardware and Software Searches
=95 Facebook Group: Connecting AMN to a Wider Audience
=95 Featured News & Articles: Showcasing Atari Musicians, Developers, and Events
=95 Frankenstein Mods: How-to Guides of user's Hardware Hacks and Mods
=95 Hardware Catalog: An Archive of Music Related Atari Peripherals
=95 Software Catalog: Music Software Downloads Including Freeware and Cracked Abandonware

AMN Future Features (To be Announced)

=95 Atari E-Store : A Centralized, Secure, and SEO Enhanced E-commerce site to help developers reach a wider target audience
=95 Artist's Self Promotion: Dedicated Profile Pages for Artist's to Create Sample Albums and Promotional Materials

You can also join the Atari Music Network Facebook Group here:

So I'm sitting here googling myself and find a post re: my CallTime
program I wrote, probably in the early 90's, maybe even late 80's,
IIRC.

I can't believe someone is still using it!

BTW, I never worked at Tower Computer. Worked at a Radio Shack at 12
& Woodward in the late 80's.

Also, if you want to send an e-mail, add 2 to the year of this e-mail address.

Thanx, and Happy New Year to everyone .
Even if own not some Atari & clone , just one of that 2. Just kidding :-)

I hope that will be good. And even working in that direction - new driver for UltraSatan is almost finished.
Need to finish some supporting utils too. Will post here when is ready for public.

Would be nice if someone could develop an application for Mac X that
would read old STe floppies

I woudl like to install teradesk 4.02 in single TOS. In clean TOS
system on the Install aplication in menu the file desktop.prg in
Teradesk directory I choose Install application and AUTO in boot
status. Nextly I save desktop and changed newdesk.inf into
teradesk.inf (because this file I have in Xboot before start the
computer. But I dont know why after restar this option is not save.
and again launch computer, teradesk is not loaded again check and only
NORMAL in boot status. Does anybody know why ?
Maybe it is another way to install teradesk in SIngleTOS. I have try
it with CT60 and F030 mode ?

Best regards

Piotr Mietniowski

That is correct

> Nextly I save desktop

That is also correct.

> and changed newdesk.inf into
> teradesk.inf

That is wrong. Newdesk.inf is different from Teradesk.inf

Via newdesk.inf the ROM TOS starts Teradesk.
Teradesk saves its config in its own Teradesk.inf
So you must keep both.

Because TOS still needs newdesk.inf to know it must load
Teradesk.

> Maybe it is another way to install teradesk in SIngleTOS. I have try
> it with CT60 and F030 mode ?

No special mode needed.
I use Teradesk this way on my 520ST with TOS 1.4

I changed this name from newdesk.inf to teradesk.inf only for Xboot, because there are a few setup before start the system. This is not a teradesk.inf from Teradesk directory.

>

The problem is because I dont know why in newdesk.inf after the run cumputer i SingleTos teradesk is not start. In newdesk.inf is path to teradest (exactly desktop.prg) but not saved AUTO status in TOS Install aplication still is only Normal in boot status

Check that XBoot is actually using teradesk.inf in the selected set. And
try without XBoot:

- Boot into TOS.
- Disable XBoot.
- Set desktos.prg to autostart and save settings.
- Reboot.

What happens?

LS

There is a new version available on my home page (see sig)

New:

General:
Changed the naming scheme of all the incarnations of AHCC.
The name of the project file is always the same as the
name of the executable. See 'distribution' in the hypertext.

Shell:
Close the project file. (problems saving after ALT+P)
Fixed a memory leak when compiling from a open window.

Compiler:
Create AHCCST.
A 68000 version without floating point support.

The header cache is always freed between make's.
It must also be freed between files when caching
is switched off.

Cached headers take about 30% less space due to
redesign of tokenized input format.

Another dereference of a zero pointer.

Library:
Fixes in stricmp, strnicmp & strtol.
Consistency check in AHCM (memory allocator).

OK, I have done Disable Xboot and only loaded clean TOS when
desktop.prg was install in boot status as AUTO and now work fine, but
when back to start with active xboot is bad again. And I dont know why
i dont work with XBOOT maybe I have bad version of Xboot ?

Do you know why withot xboot is OK?

best regards

Hi All,

I woudl like come beack to teradesk, but not only in Single TOS but
under MiNT too. Is it posibility to use with this desktop background for
example picture in IMG format or similary ?. In single TOS I tried with
DESKPIC or PICDESK, but it did not work.

Best regards
Piotrek

It's OK without XBoot because the built-in desktop is doing what it's supposed to do. XBoot is not copying teradesk.inf to newdesk.inf. Why I don't know.

I think this should work, but it requires a special setting in Teradesk (a certain background colour or pattern I think). Check the manual.

Thanks a lot, It works with DESKPIC in SingleTOS mode too, background
must set on white colour.

best regards
Piotrek

Anyone know a source for ST/STE/Falcon Badges or labels?

Could use a few of these, doesn't matter if the name on them is damaged.

By badges, I mean the plastic label on the top part of case which has the computer model and name on it.

If you just have one to spare or 10. E-mail me or post. would like to work out something for them. Need for a project.

Hey Phantomm! You could try the usual places like Best Electronics or B&C Computervisions.

Hope you and yours had some great holidays!

Later bro! :)

No, don't think they would have 'em without the name on them.
I need blank ones,  Guess I'll just have to make those myself.
Shouldn't be hard to do.

Well we did have some Magic time when the power went out and after
things calmed down.

Got some nice pics of fallen trees, luckly none fell on us.
Had a nice night display of transformers lighting up the sky, so I
wasn't out anything on fire works.

It was a christmas that I'll never forget.
Barry

Oh, my bad - didn't realize you needed totally blank ones.

> things calmed down.

Heh, yeah we had 3 days without power.

> Had a nice night display of transformers lighting up the sky, so I
> wasn't out anything on fire works.

Well, it wasn't that bad here, but some people didn't have power all through Christmas.

Hmm, do they still fill those things with oil (transformers)? I know they used to - its why they would light up so good and even explode.

> It was a christmas that I'll never forget.

Well if you like electricity, then it was bad here.  We didn't have any
electricity for around a week.
I had backup oil heaters, candles, and 2 fire places in the old place just
in case things didn't get better
with the electricity.  I generally prepare for the worst.  We spent our time
listening to the radio, writing,
reading books, and drawing by candle light.
I'm getting a good home generator asap. Been meaning to get one, I have one
for the wagon.
but our winters have been rather mild over the last dozen years or so. I've
not seen so much excitement over snow
since I was a young boy.  Back then we prayed for such days, no school, and
riding sleds, life was much simpler
in those days.

We were warm, together, and safe. And the candles were nice too!
Barry

It wasn't at all fun.  When you have someone who doesn't understand that
electricity isn't a given
part of life. Then it's pure hexx trying to explain it to them. So it was
95% hexx, but when the 5%
of fun came, it was magic! And here we all learned something during this
experience.
Not sure if it was worth all the hexx we with thru however.

Anyone still using an Atari based stuff for Music stuff these days?

Web sites, links please if you know of any...
of just let me know what if anything is going on...

Also, any real Atari users from the old days still going?

I know most of us have modified our own equipment,
just curious if there is still a demand for Atari based software,
hardware, music and the like?

I never left but it seems that everyone else did.

I'm pretty sure that most of us that frequent the newsgroups and website
forums would respond with a resounding yes. :)

> I never left but it seems that everyone else did.

Nah, we're just hibernating through this cold winter... :)

I'm still using some Ataris:
- two TT for programming
- two STE's for games.

You can see them on my page:

http://pagesperso-orange.fr/gtello/machin_e.htm

Guillaume.

Ben,

Go to http://highwire.atari-users.net and post on the forums.

If not.. post here.. What is the problem?

Hi!

In order to extend the support for HDDRIVER there is now a special forum
for HDDRIVER-related issues: http://www.seimet.de/atari/forum/.
This forum will provide news and first-hand information on anything
concerning HDDRIVER and the tools included in the HDDRIVER distribution.

Best regards

Uwe

What CD programs are/were available for making
Audio/Data CDs on ST-Falcon?

I know of a couple that I use, but seems I recall a few others
that were made. If there are any that work, would like info on
them and which CD burners are supported?

If anyone has any paper and or software related info
on the SonoVista, E-mail or post please.

Looking for article reviews, music/pics setups saved to
disk(s), Original Disk Software, anything different.

I did find a Web page with some history and newer stuff.

In the market for used working and non-working parts and systems
for the following....

Atari Falcons- old upgrades, chips and various parts, non-working Falcons.

MegaSTE- working VME cards, working original keyboard.

MegaST- working and non working systems with/without keyboards.

Working Mono monitors.

Contact me by e-mail if you have something to get rid of/sale.

Not sure, but think I posted this before, but in case you missed it,
ExtenDOS Pro and the CDWriter Suite from Roger Burrows at Anodyne Software
is pretty awesome. It works fine on my Yamaha burner on my Mega ST for
backing up my BBS stuff to CD. Its also great on my Liteon DVD burner on
my Falcon - yes, you can burn DVDs on your Falcon. Does audio CD's on
both as well. There is a list of supported software on the website.

http://www.anodynesoftware.com/

It is commercial though. Or were you talking about free software?

Shouldn't be too much, I've had monitors shipped to me before.
I need one or two that works, if you are in USA, I'll pay shipping charges
as long
as they work. Box one up and next time you go to the post office, get
someone to
check out the postage to MouthCard KY. 41548

Contact me at my e-mail address.. phantomm@suddenlink.net OR
phantomm@bellsouth.net

thanks,

```

I have that software, bought it new, haven't upgraded to the latest version
though.

Was wondering if there was anything else available besides ExtenDos/CD
Writer?

Hi,

It seems Geocities network <http://www.geocities.com/> is closed.

Some ATARI WEB sites are missing.

<http://www.geocities.com/nmontaser/> Homa Systems House
<http://www.geocities.com/tosbox/> Tosbox
<http://www.geocities.com/SiliconValley/6880/phsw.html> Probe House
<http://www.geocities.com/SiliconValley/Vista/6443/> Swiftel Photo
<http://www.geocities.com/tokilinetest/> TOKI LineTest
<http://www.geocities.com/thebitsclub/> the BITS club
<http://www.geocities.com/clu-da-bard/spectre.html> Spectre GCR

May we have news from their maintainers ?

Regards,

Fran=E7ois,

If I remember correctly, YAHOO! shut down GeoCities somewhere around
the end of October.

I sincerely hope that all of the stuff that people had there was not
simply... lost. There are other options out there. The BIG problem
will be people who were taken unaware and did not realize that
GeoCities was 'going away' and don't have backups of their stuff. Such
a waste... the WayBack machine will help some, but... :-(

Be well,

Joe Mirando, A-ONE Magazine

Yes it closed 10/26/09 and they gave a notice back in july, I already
had the site backed up, not sure where I will put the new yet, cost is
low but I need things to get back to normal with the economy first.

You could re-create your page on a *free* site at:

http://sites.google.com/

If you want to use things like PHP and MySQL, you can get web space *fairly* cheaply hosted on a Linux box at:

http://www.omnis.com/

They have fairly liberal policies on bandwidth per month, web site
disk usage, and such.

```

Was wondering if anyone has done any
new programs for the VideoMaster Cartridge,
VIDI ST, VIDI ST12, or any other atari computer
```

```
based video cartridge or board?

or any new software for converting some of these
video formats into more popular formats?

     I have rewriten the software to make it run in TT Medium on an Atari TT
or in Truc Color if you have a Nova board.

     You can see my peculiar interface at:
http://pagesperso-orange.fr/gtello/tt_e.htm

     Guillaume.

Has anyone else had a problem with zWeather: For me, it stopped working
when the US caught up with the rest of the world in location names.

I was 43560, which is a zip code, and that worked until it became
USOH0935, which is the same in country-state-location number format. Now,
neither works, and I did clear the cache.

What am I doing wrong. I have the latest program versions, and in doing that found that I already had the latest versions. zView, which shares files, is it's usual wonderful self.

Help, please.

Jim

Hi all,

I would like to connect to Atari Falcon to the internet using null modem cable via laptop with linux.
I have read this information how configure on Patrice Mandin webpage
http://pagesperso-orange.fr/patrice.mandin/en/howto-net-ppp.html

"TCP/IP connection between Atari and Linux"

Additional informations. Because on the laptop I have not a RS232 port I use special converter USB2RS232. I check this port and cable null modem using on the linux this command

```
picocom /dev/ttyUSB0
```

and when I press a key I had this letter on the screen.

I try this on Kubuntu linux distribution, but I have heard that OpenSuse is better.
The question is:
Does Somebody experience to use internet via null modem cable, or maybe another configuration I can used ?

From Mintlist I heard that another metod is
...
there is another way of connecting via null modem cable: slattach.

Do you know what can I do ?

Thank you for all

best regards

Piotr Mietniowski

LS

AHCC is a Pure C compatible C compiler.

There is a new version available on my homepage (see sig)

Summary of changes:

Assembler:
Fixed a memory leak;
C preprocessor activated in .S files
While doing this, it appeared that AHCC never checked
if a preprocessor command was the first of a line. :-(
This is now repaired.

.global
.org
.equ and .set second form
.ascii
.asciil
.asciiz
.page

option -*u   default .super

Repair broken exg An,Dn

Allow mixed register lists of form:
Dn-An (ascending register number) --> Dn-D7/A0-An
An-Dn (descending register number) --> An-A0/D7-Dn

Option -*w to set default size for Xn (no dot).
default (option not set) is word.
Also fixed a bug in determining the Xn size.

Compiler:
Activated and fixed option -x prepend underscore.
Fixed occasionally incorrect line number in messages.
#warning
__func__ identifier and its synonim __FUNCTION__
case: long constants allowed
Fixed stupid mistake in constant validation since v3.b3
Typos in constant folding for <= and >= (wrong way around)
Not detected until compiling emutos :-(

Negative absolute operands handled correctly.
Removed '#' from #warn, #error messages.
Less cryptic message for mismatching pointers to function.
Sometimes the Help opened the wrong file.
Fixed by restructuring the Help DataBase.

Allow 'formal' declaration of arrays by specifying
empty [] pair. e.g. static char forward[];

It appeared that if flag 'cdecl calling' was set,

functions returning a pointer returned in D0, wereas the
callee expected the pointer dtill in A0.
Probably a relic of a distant past.
Pointers are now always returned in A0.
Fixed another bug in 'cdecl' calling in combination
with __syscall__. (a2 wasnt reserved)

Incrementing a void * wasnt warned nor handled sensibly.
Arithmetic to unscalable pointers is warned and not scaled.

Fixed wrong handling of absolute Lvalues and references.
Fix and improvement of rare optimization incidence.
Fixed a bug in implicit dereferencing of callee expressions.
e.g. (a ? c : d)(arg);
Fixed a terrible regression in constant casting.
Casting int to float was lost somewhere.
Fixed a bug in long pointer scaling in 68000 mode (-2-)

Linker:
Fixed a memory bug for libraries with excessive
number of names. (more than 1359)
Result of a nested project was not correctly passed
and the linker was not called. Fixed.
'Linking' message gives name of project file.
Object files are linked in the order in which they
appear in the project file.

Build a ROM image:

```
Option -t=N   N is startaddress of text+data sections.
                   bss start will be set at 0.
       -i=N   N is size of image in kilobytes. (zero padding)
```

Make sure ALL areas are of even size.

Shell:
KIT: button 'inherit options'
for nested projects, inherit options from parent project.

Editor:
Improvement of UNDO behaviour. UNDU after HELP.

Hi Jim - - - I can't help you with the problem but I can at least tell you that I am experiencing the same thing. zWaether isn't working for me either. Hopefully someone will be able to come up with a solution.

Bob

I think zWeather works by downloading an XML-file from the weather-site
and then parse it. If the format of the XML changes, zWeather will stop
working. You could download zWeather's source code and add some
debugging statements to see where it fails.

Something is missing in the doc's

Compiling AHCC with either Pure C or AHCC:
     the sinclude folder must be used.
Compiling CALC and DIGGER:
     the ainclude folder must be used.

You can set this via menu:Project-->Config

AHCC_PRJ.TTP defaults to ainclude.

AHCC.TTP and AHCL.TTP are there for completeness
and never used by myself.

I am not interested in Unixoids and their scripting aphasiae.

Yes, I could, but not right now, or any time soon. I am in the process of complicating my life, any my instant problem is packing stuff to make room for more feet. But first, there is no longer a list of correspondence where I could look up what versions of compilers actually work. I have EasyMint 1.52 files. What should I have?

I had to change the designation of my (Magic) XFS ramdisk from 'R' to 'W', and also changed its icon to that of a ramdisk in Thing. After that I saved the desktop.

But now Shutdown fails, with error message -46, which means Invalid drive specification. Obviously I need to change 'R' to 'W' somewhere that I haven't yet, but where?

Or do I simply have to add W to the #_DIC entries of MAGX.INF? If so, what numbers are to follow?

The present _DIC entries are as follows:

```
#_DIC 1 A 8 0
#_DIC 1 B 56 0
#_DIC 1 C 104 0
#_DIC 1 D 152 0
#_DIC 1 E 200 0
#_DIC 1 F 248 0
#_DIC 1 G 296 0
#_DIC 1 H 344 0
#_DIC 1 I 392 0
#_DIC 1 J 440 0
#_DIC 1 K 488 0
#_DIC 1 L 536 0
#_DIC 1 M 8 42
#_DIC 1 N 56 42
#_DIC 1 O 104 42
#_DIC 1 P 152 42
#_DIC 1 Q 200 42
#_DIC 1 R 248 42
```

```
#_DIC 1 S 296 42
#_DIC 1 T 344 42
#_DIC 1 U 392 42
#_DIC 5 @ 8 112
#_DIC 4 @ 8 169
```

At a guess, the new entries would be

```
#_DIC 1 V 440 42
#_DIC 1 W 488 42
```

since the present ones advance in steps of 48, but do I need to
include V as well? And what does the second number (42) represent?

Unfortunately the _DIC entry is not described in MAGICINF.HYP :-(

The problem is from what program came the error message?

What Shutdwon prgram do you use?

> Unfortunately the _DIC entry is not described in MAGICINF.HYP :-(

This entrys are form MagiCDesk and they save the position from the desktop icons.

Hi,

Because Holly Christmas is nearly approaching, and all my best wishes
are also intended to ATARIans, I embedded on my WEB site a musical
animation elaborated with POV-Ray of the 3D PacMan in a video.

<http://eureka.atari.org/walking.mov>

This animation can be displayed with Aniplayer 2.22 of course,

<http://aniplay.atari.org/>
and M_Player 3 <http://gtello.pagesperso-orange.fr/mplayerf.htm>

It requires a fast machine. I tested the video with GNU/GPL ARAnyM

<http://aranym.org/>

Thanks a lot to Didier M=E9quignon and Guillaume Tello for video players.=

I'm maintaining *miniPack* <http://eureka.atari.org/miniPack.zip>
that runs the ATARI machine supported on any computers' host systems.

The 3D modelling of the scene was performed with CyberStudio from
Tom Hudson and also Eureka 2.12, and the rendering with Persistence
Of Vision Raytracer 3.1g that I ported on our ATARI platforms.

<http://www.povray.org/>

I wish you all an ATARI 2009 animated Merry Christmas, in advance.

Let's go for the Christmas Time now =3D)

Almost certainly from Magic's Shutdown program, although it could
be from my Thing desktop.

>What Shutdwon prgram do you use?
See above.

>> Unfortunately the _DIC entry is not described in MAGICINF.HYP :-(
>
>This entrys are form MagiCDesk and they save the position from the desktop
>icons.

Thanks for that - I thought that was the case. I did try adding
entries for V and W drives as per my original posting to this, but
Thing still refuses to shut down. Same when I changed the RAMdisk
designation to 'T' in C:\GEMSYS\MAGIC\XTENSION\RAMDISK.INF (since
there was a _DIC entry for T), although it had worked when I used
'R' previously.

The reason for all this is that I was recently given a 1GB hard
drive with many partitions on it which I want to investigate.
Unfortunately when I connected it to my setup it extended my
original C to K drives by L to S, which of course clashed with
the existing R RAMdisk and partly destroyed my D directory when I
tried to access some programs on it :-(

Thanks Gerhard for your help, which has concentrated my mind!

Further to my last posting, I have now made some checks. It turns out the refusal to shutdown message does not come from Thing, because it appears also when I disable Thing and run with MAGXDESK for a desktop. A closer look at the message reveals that it comes from the CHKFREE program, because I didn't change the drive letter in CHKFREE.INF from R to W ;-(Mea culpa!

I have now solved the problem in a different way: I've returned to using the R designation for the RAMdisk, which now shuts down correctly, and when I want to experiment with the external multi-partition drive, I'll simply disable the RAMdisk first to prevent any clashes.

I am, and I do test them from the command line, for various reasons,
but I use the AHCC for editing (Qed does not like the tab chars) and
overall project compiling.

AHCC_PRJ.TTP currently accepts a project file as the only parameter.
If you dont mind, I will look at adding extra command line options, at
least for includes and lib folders

Your testing of Teradesk lately has confirmed that I do not have libs
set up properly, with command line this is much quicker to test (for
me)

BTW can you post your fixes regarding the latest Teradesk test
compile. At the moment I am stuck only on linking (under MiNT), having
made minor adjustments to the sources, an wish to confirm those
changes..

Paul

or you could use 110mb.com like I do. If you need MySQL also, I can
provide space and a db user, along with a "secure management frontend"
that you can use for writing php (or html) and uploads.

If you dont want to sign up that is..

or you could try www.000space.com (3 zeros) for similar "goodies",
without having to pay ($7) for db access. The only issue (as with most
free sites) is that your space will be blocked (from web-browsing) if
not used at least 3 times a month (3 web browser requests). I use a
"pull" page to get round these issues (an hidden iframe on my main
landing page - pulls 12-15 other websites)

Also FYI, Probe House Software is on one of the new 110mb servers (in
canada or the states, mine is in holland)
http://phsw.110mb.com/phsw.html

I may have a backup of TOSBOX site too, I will check

cheers

Paul

I have a copy of "Spectre GCR" and "Swiftel Photo" site taken around
shutdown date (no "TOSBOX", shame, my favourite GEM desktop)

You can get 0.9.9 binaries for PCLinuxOS 2007/2009 (mandriva based
dristos) from here:
http://afros-update.sf.net

also some up to date apps and desktop "fluff", only from cvs atm

This is good Patrice, real good

Is the fVDI because it does not do rez changes, or are there other
reasons as well

> least for includes and lib folders

I do mind. The purpose of this program is to be able to drop a

projectfile on it via the desktop. Pressing ALT while dropping forces a make all. I am fixing a problem with the .C [-I...] option in the project file. The project file is the place to be for include directories.
The same is true for the lib directory. I might have neglected this, because I only use the GEM AHCC (lib via KIT).
I am investigating this issue.

AHCL accepts all input files, including libraries on the commandline. Files are loaded in the order of the commandline as long as there are unresolved references and kept in memory. AHCL's reference matching is recursive, so this order is not vital. However the input will appear in the executable binary in this order. To start the recursive reference cascade it is necessary that the first file must reference something.
Most startup codes do this by refering to main.

This is how it is designed, I never ran AHCL.
It should work because AHCC uses a internal calling mechanism that mimics the commandline.

The last time I have typed a commandline was in 1985 when
I got payed for it. And it wasn't even Unix, but ICL 2900 VME/B's SCL.

> Your testing of Teradesk lately has confirmed that I do not have libs
> set up properly, with command line this is much quicker to test (for
> me)

> BTW can you post your fixes regarding the latest Teradesk test
> compile. At the moment I am stuck only on linking (under MiNT)

What exactly is the problem?

>, having
> made minor adjustments to the sources, an wish to confirm those
> changes..

about jmpa6:

```
#if __AHCC__
     void __asm__ jmpa6(void)
     {
          addq.l  #4, sp     /* adjust stack; jmpa6 is called */
          jmp     (a6)
     }
#else
     void jmpa6(void) 0x4ED6;
#endif
```

A new AHCC is not ready yet.
I found two more issues, which I am investigating.
They are rare. Only occurred until now.

:-) Your involvement pays off.

It's because when you have FVDI loaded, there is a high probability you run with an external video card (Eclipse) or an emulator (Aranym), and you do not use the Videl output.

That's why I disable Xbios, and Gem video driver is made the default in this case. You still can force xbios video driver through environment variables though.

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's almost 700, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by webmasters adding the HTML code

```

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package	#	Architecture
aranym-0.9.9.linux.x86_64.rpm	120	AMD64
aranym-0.9.9.linux.ix86.rpm	286	ix86
aranym_0.9.9.linux.amd64.deb	43	AMD64
aranym_0.9.9.linux.i386.deb	87	i386
aranym-0.9.9-cygwin.zip	531	i386
aranym-0.9.9-macosx.dmg	374	Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz	106	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (536), Windows (531), Macintosh (374) =3D total 1547.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

LS

AHCC is a Pure C compatible C compiler for GEM.

There is a new version available on my homepage (see sig)

Changes:

Shell:
Very, very usefull:
New menu entry Project->Edit ALT+P
Loads the current projectfile in the editor.
Open->Open .P* removed.

menu entry 'Find selection in project' now also in the journal.

KIT: button for option -*u (default .super in assembly)

Compiler:
Improved include file lookup.
Now Teradesk compiles directly from its own directory.
Teradesk compiles without 'inherit options'.
The need for setting a include dir in the KIT is almost
never needed when -I's are in the project file.
This is also beneficial for AHCC_PRJ.TTP. There the default
to ainclude is removed.

Made a lot of error/warning messages a lot more readable.

Completely forgot about relative long branches in the
output phase. :-(Fixed.

Fixed a regression and a closed loop while generating switch
tables. (related to allowing long 'case' constants)
It happened when a case value forms a negative short.

typechecking of call's:

```
p(); or p(void);   /* declaration */
........
p(); /* call */
```

Is no longer warned. The mixing of old and new syle is silently
accepted when no arguments are involved.

Same for declarations:

```
p() or p(void);
```

```
     followed by
     p(void){...} or p(){...}

     Bugfixes for rare cases involving boolean comma expressions
     and pushers.

Assembler:
     Fixed ordinal in "out of range" message for shifts.

     Fixed a serious regression when combining C and Assembly in a file.
     (message: CE: invalid asm area number)

     Accept include filename between ampersands.
     For the moment the warning persists and can be ignored.

You might try a SCSI card reader. That should work. ou can
still find them on the web. A Jaz drive is another option.
That is what I use and it works fine.

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's almost 700, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by webmasters adding the HTML code

```
<CENTER>
<form action=3D"http://www.google.com/cse" id=3D"cse-search-box">
   <div>
     <input type=3D"hidden" name=3D"cx"
value=3D"014753128619202207476:tzogojpdahi" />
     <input type=3D"text" name=3D"q" size=3D"25" />
     <input type=3D"submit" name=3D"sa" value=3D"Rechercher" />
   </div>
</form>
<script type=3D"text/javascript"
src=3D"http://www.google.com/coop/cse/brand?form=3Dcse-search-box&lang=3D=
fr"></script>
</CENTER>
```

Have a good ATARI WEB Surfing =3D)

An IDE interface would, provided you use a BigDOS partition and an
IDE2CF adaptor cable. And of course there is the UltraSatan SD card drive.

Floppy Image by Pera Putnik reads and writes 10 sector disks on your PC.

Hyperformatted disks, too? (11 sectors, 82 tracks)

Regards
G�tz

Hi all,

2009 is the year of the 25th anniversary of breaking innovations in personal computing. Early 1984 two milestones were unfolded on both sides of the Atlantic Ocean. Europe was first with the launch of the 32bit multitasking/multiwindowing Sinclair QL. 12 days later America saw the launch of the 32bit GUI/multiwindowing Apple Macintosh. They both entered the field to compete with IBM's PC.

While the Mac did it in the long run and is a mainstream product in the present and future, the QL went into dust.

Before leaving the field, the QL inspired many experts and influenced today's products in one way or another. Most prominent example is Linux, where its creator Linus Torvalds was a QL crack back in the 80s. To learn more about all that please follow the full 25th anniversary story.
www.tinyurl.com/9ryma3

Earlier this week Apple presented their figures for the last quarter. Most Profitable Quarter Ever; Record Mac and iPhone Sales.
http://www.apple.com/pr/library/2009/10/19results.html

Today Microsoft launched Windows 7.

Only future will tell how the desktop platform market develops in the coming years.

This and recent coverage and homage of the Sinclair QL in both media and web in the UK motivated us to organize an

international event to celebrate the 25th anniversary of both the QL and Mac. The event will be in a conference style

with sessions, exhibition and traders & workshop area. It will be hosted in the brand new Conference Center at

Verkehrhaus, Lucerne, Switzerland (Swiss Transport Museum) on Oct 31st and Nov 1st 2009.

The event is not only retro, it covers past, present and future ICT themes. There will be 8 interesting sessions on QL,

Mac, iPhone, Mac OS X, Windows 7 and AmigaOS 4.1, an exhibition and a workgroup/traders area.

The Event web-pages were updated recently.
http://tinyurl.com/ql-mac-show

Regards, Peter
P.S. We will have the 2009 BBC drama "Micro Men" on screen.

Just wondering... Bravo and Sierra are phonetics for B and S.

Why would anyone buy from BS Computers? Sure, it's Ben's initials, but
in the minds of most English speakers, it's an acronym for something
significantly less pleasant.

I've bought from them - no problems at all. Many times, they had items or
software that I couldn't find anywhere else. Ben does over-post a bit, but
its not that big a deal for me - its what filters or the delete button are
for. :)

Hello,

Before I had to reinstall MiNT, there was a boot.log file at the
root of C:, that was updated each time the FalCT60 was rebooted.
Now, this file isn't updated anymore, and I don't know how to
have it again, despites the "boot log" option is set to "on" into
the CT60 menu.
I don't understand why is it no more active, but would like it to
be so I could fix some settings in my 1.17 config.

Thanks in advance,

J.-Luc

Hello All.

My SC 1425 color screen is out of order.

With the help of members of the FCSA group, I suspect
the high voltage module to be the culprit.

Unfortunately, the label is nearly unreadable. I can
see however it's a Philips component.

The indications I can read are :
On the label
T2078 (not sure)
Printed on the module
193-001
8E128

Can one of you confirm the references or tell me where
I could find the electronic schema of this screen ?

I'd like to try to repair it before looking for a replacment
screen.

Best regards.

Hello everyone,

a while ago, I got the C64 version of Level 9's "Jewels of
Darkness" (JoD) from Ebay.
I like it a lot, but I don't like the wait times each time a picture
is drawn.
That's why I tried to get the ST version of JoD.
I downloaded Automation Disk 500_E3 from www.atari.st. It runs fine in
emulators, but when I write the image to a real diskette, the games
don't run on any of my real (German/PAL) STs. It loads to the menu
where I am asked to select which part of the trilogy I want to play,
but no matter which one I select, all I ever get to see are the ST
system's bombs of death, and then the system will return to the
desktop (GEM), or reboots. Looks like an incompatibility, doesn't it?
Looking arount for a different release, I hit upon Gamebase ST v3.1d.
Unfortunately, the version included there, though different from the
Automation release, does not work on my real STs either. (Same
problem: menu->bombs->back to GEM)
Do you who own a PAL ST get this game to work on your machine(s)? Are
the two releases mentioned NTSC releases? Is there a PAL dump
available somewhere?
Everything2.com says that these games had been released as 'The Middle-Earth Trilogy', and 'The Colossal Trilogy' before, but everything2 is
not entirely clear as to whether these earlier releases were also ST
releases. In any case, I could not find them.
Jewels of Darkness is not the only game from www.atari.st that works
with ST emulators, but not on any of my PAL STs:
There are issues with Wings of Death (intro works, but actual game
does not start) and Super Cycle (voices of the title music are out of
sync, the game itself runs fine.)

Is that what I should have expected? Have NTSC/PAL incompatibilities
always been a big issue when the ST was popular?
Thank you for any hints or help.

Chris

P.S.: I am aware that in many of the intro screens from compilations,
there is a feature to switch the screen refresh rate between 50 Hz and
60 Hz, but in the cases mentioned, this was either not available or
did not help.

They replied? Wow! I tried for more than a year to buy MagiC for my
Milan from ASH. I never got a reply from any of the mail addresses found
on their website/shop.

Ok... question...

I personally don't have a problem with this kind of site IF the software is truly not available anymore. My question is, is it really illegal and should we really worry about complaints if the software can't be bought, the author doesn't support or update the software anymore, and obviously there's no more money being made in it?

Ok, yeah, technically it's still copyrighted, but the purpose of the copyright is to make sure money goes where money is due. If no money can possibly be exchanged anymore, what's the use of a copyright?

Finally, with software like MagiC, I think there comes a point where we no longer worry about who's making the money, and start worrying about whether or not the software is going to completely disappear. At that point, I say we spread it all over the place so that that does not happen. Or better yet, beg, plead, and grovel to the author to release it as open-source so that it can be built upon.

Just my 2c's.

Mike Freeman

Hi, that is great :) Can anyone confirm all that is necessary to get
MagiC 6/1/6/2 running is available in these files? Without me looking
into it? I'm not too advanced an user, not even ever un-zipped
anything on my AtariST, never needed to use it, though I have seen
software for in in my library. Thanks again for the link.

Server still up btw for the one peep who wants to do me the pleasure
(after all these years) ;) Can do something in return of course, just
ask please ;)

To make things easier for people not much experienced with hard disk drivers, settings I made collection of latest mine game hard disk adaptations together with most suitable driver/partitioning kombination for gaming on Atari machines - considering speed, easy file transfer with PCs and game kompatibility (RAM usage, Timer C etc.) .
It is autobootable on ST(E) with ACSI attached hard disks, Flash cards. Or on machines with IDE IF, Falcon too. Read supied TXT how to correct for IDE autoboot.
Is for cars marked with 1GB - size of image is 905 MB (950 millions), so must fit on every decent card. With 3 TOS/DOS compatible partitions. No need for BigDOS.

Read here more details, DL link is there, some YouTube videos too :

http://ppera.07x.net/atari/DiskImgPP1.html

Now some "rethoric" , please don't skip :

DOS partitioned drive in combination with BigDOS prg is not really good for gaming, Most of them will work, but many will fail. Mine latest adaptations with GOS4, GOS5 (where files D15R... are included) will fail for sure. That's one of the reasons for making this kompilation with more advanced driver/partitioning,
My hard disk drivers are better for gaming than others. I can say it for sure. The reasons: small RAM occupation. Easy install, no bothering with obscure settings. Special options for compatibility. Easy change of boot (active C) partition during booting self - what means easy change of TOS/Desktop settings, considering ACC, memory resident programs, drivers...
Then no stucking if game stops Timer C - AHDI and Hddriver will just stop in such case.
Flexible driver - may run in high RAM too.

Now some notes considering some recent shittings about my adaptations, drivers from usual assholes:
It looks that they just can not act like decent humans. What they write about Armor-Geddon is ridiculous and incorrect. Then, their knowledge is very limited, obviously...

Just few examples: the morons are proud that their included 500KB JPG

and 5MB PDF with game in archive. Whatfor ? Everyone can DL cover scan
at several places. PDF is from GameBaseST. Why people need to DL it
again? The reason is likely: they now can say that they suplied
complete artcover, 'unlike other version' with flockering fragment
of . LOL !
I'm sorry that I dd not solve displaying of 900x600 pixels in 16
million colors on STE. It is possible, but depacking of JPG is little
slow :-)
Their 'superb' hard disk fix missing last 10 seconds of (very good)
game intro.
Explanations about why it needs 2 MB are pretty ill. But I know some
things, because I spent some time solving running of complete intro on
machines with ACSI/SCSI drive, and only 1MB RAM needed (not 4 as
morons claim). There are videos on YouTube:
http://www.youtube.com/watch?v=rPMyR_-Jmd4&feature=player_embedded
http://www.youtube.com/watch?v=Mu21RSZB4y4&feature=player_embedded
- so people who listening on morons and is afraid from 'partition
wiping' may see whole intro :-) . (Btw. how that they forgot
mentioning 'wiping' in Armor-Geddon announce ? :-))))

The morons did not miss chance to shit about my hard disk drivers. But
this is only thing what they know. Do something better instead
spitting on people's work, assholes !
And they of course are not aware that BigDOS is not kooperative with
many games.

Sorry for boring and long explanations - truth is usually not so easy
as gossip :-)

The Nordic Atari Show (NAS) will be held Nov. 20-22 in Falk=F6ping,
Sweden!

NAS is an annual get-together organized by the Swedish Atari Club
(SAK). It's a simple, improvised event; the idea is to hang out, eat
pizza, and fool around with our beloved Atari machines. The essence of
NAS is its visitors and what they choose to do with it.

Traditionally NAS is an Atari event, but other (retro) platforms are
welcome as well.

For more information, visit
http://www.sak.nu/index.php?subaction=3Dshowfull&id=3D1256149806&archive=3D=
&start_from=3D&ucat=3D3&.

I have a few items for sale.

1 mega 4 Mint condition
1 mega 2 Mint shape just as a UK keyboard but it is a US unit.
1 Megafile 30 Great shape.

There are the main items I have, I have more mail me with your needs I will
let you know if I have em,

Shoot me offers on the stuff. I want it to goto a good home,

Hi, some screen views of the GENEVA multitasking system on a STE.

Click on the "GENEVA" link on this page:

http://pagesperso-orange.fr/gtello/aste_e.htm

Guillaume.

Hi Guillaume! Hmm, I'm not really sure. I know Dan did release some software for it, like the NeoDesk Commandline app, but I'm not sure about anyone else doing anything specific for it.

Almost all well written TOS/GEM software worked under it though, and it had a lot of built in options to help stubborn software run (for example, shifting it down to single tasking mode and freezing everything else).

After I get my STacy fully worked over, it's probably what I'll run on it.

They actually do have a website up, but I think its pretty old:

There are ports of GNU Chess for sure.
Look at ftps.

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package	#	Architecture
aranym-0.9.9.linux.x86_64.rpm	90	AMD64
aranym-0.9.9.linux.ix86.rpm	230	ix86
aranym_0.9.9.linux.amd64.deb	36	AMD64
aranym_0.9.9.linux.i386.deb	68	i386
aranym-0.9.9-cygwin.zip	413	i386
aranym-0.9.9-macosx.dmg	288	Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz	83	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (424), Windows (413), Macintosh (288) =3D total 1208.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

Thanks for both of your replies! Gemchess runs well and at lethal speed on CT60 and is quite challenging to put it mildly. I also came across Chess Champion 2175 which runs in ST Low with backward.

Hello,

Here is a new release for SDL, here are Atari specific changes:

- Video: Automatically disable Xbios driver if FVDI is detected.
- Video: Experimental support for Milan Xbios.
- Joypads: Teamtap autodetection.
- Audio: Enable Xbios driver for Magic.
- Experimental support for Coldfire CPUs.

Hi,

The following WEB sites are missing

<http://www.myatari.net/> MyAtari Magazine
<http://www.geocities.com/lkermel/new/main.htm> LAURENT KERMEL (games)
<http://www.encill.abelalways.co.uk/pages/apex_med.htm> APEX Media
<http://www.ataritt030.info/> ..:: Atari TT 030 ::..
<http://www.computerhistory.org/> Computer History Museum

May we have news from their maintainers ?

Best regards,

Hi,

September is a great date to start the payments of CTPCI.
I'm very happy to open the final orders.
It's the result of a big work.

A page with price & shipping cost is available here :
http://www.powerphenix.com/CTPCI/English/prices.htm

For the less enthousiast of you, there is a page of benchs (not definitive until the DMA is usable) :
http://www.powerphenix.com/CTPCI/English/benchs.htm

And the presentation of the board with new infos and photos :
http://www.powerphenix.com/CTPCI/English/overview.htm

2 last infos : Cubase audio 2.06 running and possibility to cut PCI SLOT board for only 1 connector (Falcon case integration).

There are several ways to pay and I recommend you ways with the lower fees/taxes...

The manufacturing will begin in october...
Some parts need more than 1 months to arrive here (direct from factory far).
Shipping is planned for November IF no manufacturing problem and no added delay on some parts.
The order of shipping is simple : first payed is first shipped.
And the shipping of all boards will continue during 1 month...

There is no limit to order : if you want 10 boards, no problems ;-)
Contact me to get a reduce price for a such quantity.

I do not accept partial payment under 130 EUR...and only in 2 payments with a max of 1 month delay between the 2.
Payments with more than 2 euros missing on total will have to be complemented.

The number of produced boards will be matched on the number of order received + 20% max.
Actually the chips are pre-ordered for all pre-ordered CTPCI + 40%...
This should cover the late people even in 2 months... even if I prefer to sell all boards quickly ;-)

This is surely the unique batch of CTPCI. No others after.

If you have question that have no answer here, please email to me...I will not answer on forums.

If you did not receive this message on your email, and like to receive the next news, please inform me.

Thank You for your support of Atari Hardware...

Regards

Rodolphe

ACEC 2009 VINTAGE COMPUTER AND VIDEO GAME SWAP MEET

GREAT NEWS ATARI FANS!!!

The Atari Computer Enthusiasts of Columbus will be holding the annual vintange computer and video game swap meet on Saturday September 12th 2009. It will be held at the same place as last year. As you might notice, we have a new name. This year we are going to include all vintage and classic computers and video games, systems, accessories, games, and software.

Oakland Park Community Building
980 Lenore Ave.
Columbus, Oh.

Right now the time for the swap meet is from 9:00 a.m. to 3:00 p.m.

Admission is FREE! FREE! FREE!

That is right, it is free for both vendors and shoppers! Vendors, please contact us to reserve tables. As it will be first come first serve. We may have to limit the number of tables for each vendor. We have a new feature this year that will allow dealers to pick out what particular tables they want. Please check out our web site for further information and updates.

Hello,

I am interested in hearing about other folks experiences with the latest Atari ST Emulators for Windows and Mac machines. I have not been following this scene for the past couple of years though. I think I must have tried them all in one form or another over the past 16 years in commercial, demo, or freeware forms.

What I am after is an Atari Emulator that I can use the TCP/IP stack of the host Operating System (Windows or OS X) from within the Atari Emulator. Like I was able to do with my Mac 8500 running MagiCMac under Mac OS8.51. There I am able to use IConnect in MagiCMac to surf the Web with CAB. I no longer use this machine so I=92d like to do this with my current Mac or Windows machine. I want to try Highwire and other applications under emulation without having to setup my TT.

If anybody has been able do this please post your setup here with explicit instructions on your setup or how to do it.

Thanks

From 8989254231623807671

I think Aranym with AFROS is your best (only?) choice. AFROS comes with
networking already set up.

MagiCMacX (the OS X version of MagiCMac) does not have any ability to
use the host computer's networking stack. There is a plug-in system
available, but no-one has ever written one to add it AFAIK.

Maybe the PC version will let you do it, I don't know.

Aw Ben that's too bad. If I'd seen your message before I put it to auction I would have contacted you, but I don't get online much anymore these days. I will also be selling a Mega ST4 upgraded with a FastTech 25mhz upgrade (software-switchable between 25mhz and 8mhz). The Mega is in good shape (a little cleaner than the one I'm auctioning now actually) and the upgrade works great. I believe it has a TOS upgrade but I can't remember which version (I'm not at home now). Let me know if you are interested, and I can send you some pictures and more complete details. I'd really like these to go to good people who really appreciate Ataris rather than just any old somebody.

You can contact me at micahbrunt (at) gmail.com, or mbrunt (at) yahoo.com

Hi,

Here is final stats about ARAnyM 0.9.8beta downloads, released 09/04/25

Package	#	Architecture
aranym_0.9.8beta-1.etch_amd64.deb	111	AMD64
aranym_0.9.8beta-1.etch_i386.deb	131	i386

```
aranym-0.9.8beta-1.fc10.i386.rpm        102                          i386
aranym-0.9.8beta-cygwin.zip             498                          i386
aranym-0.9.8beta.dmg                    429     Mac Universal (PPC/x86)
aranym-0.9.8beta-ps3.zip                 60                         PPC64
aranym-0.9.8beta.tar.gz                 223        Platform-Independent
```

Download at <http://sf.net/projects/aranym/files/aranym/0.9.8beta/>

i.e. Linux (344), Windows (498), Macintosh (429), PlayStation 3 (60).

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

Is anyone able to search the groups and have it work ? Last few weeks
I have been unable to do a search, returns NOthing found.

I bought a HD systems from Datel computers back around 90 and I
upgraded the software a year later from GE-Soft, they were working on
a TT clone, anyway has there been any upgrades to the HD driver since
Driver 3 Ver 1.0 ?

Lost my icd adaptor when I moved, still have a supra drive as backup,
I think all host adaptor's are getting hard to find.

mike

Just tested, and the search seems to return hits from the last few days
only. So something's wrong.

I don't think there has been any updates to any commercial driver for
years except from HD-Driver.

Have you tried the COPS control panel? I have had this happen to me
from time to time. Sometimes it is just as simple as the order of
loading of the CPX's. Try loading just one CPX file and see if that
works. Also, try booting from a disk with some CPX's on them. I have
also had many instances where the COPS control would not work, but the
Xconrol panel would and vice versa.

Hi,

There's a 0.9.9 release of ARAnyM <http://aranym.org/>, so the *miniPack* <http://eureka.atari.org/miniPack.zip> was updated. It supports

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =3D)

AtarICQ 0.174 is released

Finally! A new release is now available, and for the first time in 4-5 years there is now a new OVL too. The new OVL is more than anything else targetting some rather serious stability problems, some of which where causing problems exclusively under MiNTnet/gluestik, and then there was the one which prevented aICQ from running on a 68000 cpu. In other worse, this new version should be well worth a closer look, especially if you have had problems with stability or performance in the past!

A huge thank you goes to Denis Huget who has made this new release possible by his great work on the OVL.
THANKS!

Important changes in the latest release:

1. AtarICQ is now able to cope with environment variable FONTSELECT when a full path is submitted instead of a process name. If a full path is sent, aICQ then tries to start the font selector (if not already running).
2. Fixed a bug in the contact list code that under some circumstances would cause a crash when swapping contacts by using up/down ARROWs.
3. Removed a debug messages that was accidently left in the final 0.173-release. It was a text message written to screen/console.
4. Fixad a small bug in the code for manually resorting (by dragging) of the TABs in the message window.
5. New feature added. The shortcut ALT+X will now trigger aICQ to remove all temporary contacts that exist at the time. The main benefit is to be able to quickly sweep your contact list clean from ICQ spammers. (Normally, you have all your contacts on the permanent list)
6. Slightly changed code for evaluating the status of online contacts. Should avoid confusion when it comes to clients using exotic status values.
7. New keyboard shortcut, ALT+H, will toggle the hiding of offline contacts.
8. OVL sources are branched from the 0089 version (newer sources were lost) sad smiley
9. OVL tweaked to cure problem where a large SSI contact list would potentially cause the OVL to hit an infinite loop (thus freezing)
10. Speeded up the automatic requesting of basic user info to reval the nickname of UINs loaded from the SSI list.
11. Fixed a fatal bug which would strike under specific circumstances when requesting basic user info for a UIN, and the server didn't reply. (NOTE: The chase for this particular bug has been going on for 3-4 years, the challenge being that it was very hard to reproduce reliably)
12. OVL will now work better with 68000 CPU (no more odd address access)
13. Improved the routines keeping track of server requests, timeout of data, etc.
14. Fixed a problem with font size in the text input field for outgoing messages, striking under old Single TOS and standard AES/VDI.
15. Cured a small memory leak which happened when requesting extended user info.

16. Changed default behaviour:
-Hiding offline contacts = OFF
-Auto switch to new message = ON
17. AtarICQ now keeps track of incoming typing notifications, to be able to let them "time out" after a certain time of inactivity from the other end. This time is currently set to 20 seconds, after which the typing notification icon will be removed.
18. OVL can now successfully send messages to the AIM/ICQ-clone Trillian, which turned out to be rather picky.

NOTE: At this time (2009-09-19) you might notice that some of your friends from your contact list aren't listed as online despite being very much logged on and available. The reason for this is more than likely that AtarICQ still doesn't posses the ability to update the server side list, hence all contacts not present there might be listed as offline at all times. The only way to solve this is to either use another ICQ client to update the list, or hold your breath until AtarICQ is able to do this.. winking smiley

Oh, and you can find the new release here:

http://www.ataricq.org/

Have fun, and don't forget to share your thoughts on this relese with us,
after all, feedback is what keeps things like this rolling..

Regards,

/Joakim

If anyone has a ST-Falcon Software Connection or Collection I am....

Looking for a program titled "Thought!" by Titan Designs. Would like the original software package, Used or New if possible.

And, does anyone know if the original disk(s) have any BackUp Protection?

Willing to pay fair price or trade for software of equal value.

Hello,

ABE & SDR V7A updates are now online.

This version allows you to break the timing limits of CPLD and go up to the
060 (cooling) limit !!
This version is an obligation for CTPCI...

Please give me feedback ONLY IF you have bahaviour trouble with these 7A.

Regards

www.powerphenix.com/CT60

Rodolphe

Hello,

A few weeks ago, one of my 2 EtherNATs broke down.
Then, I switched with the one on my second machine, that I only
turned on when needed to backup the main one.
Since then, the second EtherNAT has been working very often, and
then started becoming unstable, making the system hang while file
transfers from/to the PC, just like did the previous one before
it stopped working.
I've sent the first board to Sweden to repair, and I hoped it
could be fixed before the second one would stop working too.
Unfortunately, the second board decided to fail yesterday, while
transfering some important files to my PC.
After a couple of retries, I gave up, unplugged the board, plugged
the old EtherNEC back in the ROM port, replaced the EtherNAT driver
with the EtherNEC's one, and then could access the net again.
I am very angry that those very expensive boards only worked a few
months - less than a year, in fact, because it took some months
from the time I got them and the one I decided to switch from
MagiC! to MiNT so I could use them -, while older less expensive
boards still work fine after many years (at least 5, IIRC).
Well, in fact, I had to switch down the MoBo from 25 to 20 MHz for
the computer to boot with the EtherNEC. Otherwise, it would reboot
again and again after copying the TOS in RAM.
But, now, file transfers last very long, at only 11~18 kb/s, where
they reached up to 140~180 with the EtherNAT.
So I am wondering if the driver I use (Enec6.xif) is the good one.
Do some of you there use EtherNEC with CT60/63'ed Falcons ?
Which driver do you use ?

Regards,

(Unlucky) J.-Luc

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package	#	Architecture
aranym-0.9.9.linux.x86_64.rpm	35	AMD64
aranym-0.9.9.linux.ix86.rpm	65	ix86
aranym_0.9.9.linux.amd64.deb	26	AMD64
aranym_0.9.9.linux.i386.deb	33	i386
aranym-0.9.9-cygwin.zip	171	i386
aranym-0.9.9-macosx.dmg	101	Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz	35	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (161), Windows (171), Macintosh (101) =3D total 466.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is a minimal distribution of <http://aranym.org/> designed for GNU / Linux, Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

This is a little bit unfair. You're probably one of TWO cases when
I've heard their ethernats have some problems... two cases from
hundreds! I don't understand why are you crying here, spreading words
like that and don't send those (from your point of view) faulty
devices to Nature guys asking them for fix / explanation / test if
it's REALLY ethernat issue and not your falcon/ct60/whatever.

Which movie? Couples Retreat? I've seen a poster for that but no sign of an Atari Font (schmoltzy rom-coms don't seem very compatible with the modernist style of the Atari font either).

Dear All,

I have some problem with my Eiffel interface, I do not know why, but sometimes (not ever) when the system crashed and I have to reboot the

computer, I have information Keyboard failure on the screen during
boot computer. And the the keyborad and mouse may not work, but
sometimes nevertheless keyboard and mouse work fine.
Similarly when reboot computer again return to good work and on the
screen I have information "Keyboard OK".
Does anybody know what is the reason ?

Best regards
Piotr Mietniowski

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the Most Common ST Disk Drive! And the case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned

Atari's from Oblivion!Goto http://BenSells.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Taskbar 4.12 has been released today. A few bugs fixed and some features
added. The most important change is that Taskbar is now multi-lingual.
Currently only English, Germand and Norwegian is supported, but I'm
looking for volunteers to translate it to other languages.

Taskbar can be found at http://atari.nvg.org/download.html

Thanks for the page Guillaume! I've had my STacy for awhile now and I love it. I was stressed out the first time I took my STacy apart too. If Atari had tried, they could have actually made it hard. <LOL>

Most apps will run in monochrome mode (ST-High) and there are actually quite a few games, even some great ones that play on the STacy. Here is a list - I'm not sure that its even complete though:

ATARI ST MONO GAMES LIST

20,000 Leagues Under the Sea
8 Ball
Alpha Waves
Balance of Power
Balance of Power - The 1990 Edition
Ballyhoo
Battlezone
Beyond Zork - The Coconut of Quendor
Black Cauldo, The
Bob Winner
BorderZone
Borrowed Time
Brataccas
Bunny Bricks
Bureaucracy
Checkmate
Chess Champion 2175
Chess Player 2150
Colonel's Bequest, The

Conquests of Camelot
Corruption
Crystal Castles
Crystal of Arborea
Cutthroats
Deadline
Deathstrike
Donald Ducks Playground
Electronic Pool
Enchanter
Esprit
Fish!
Flight Simulator II
Flight Simulator II - Europ
Flight Simulator II - Japan
Flight Simulator II - Lake Huron
Flight Simulator II - Washington
Flip Side
Gnome Ranger
Gnome Ranger 2 - Ingrid's Back
Gold Rush!
Guild of Thieves, The
Hanks' Quest - Victim of Society
Hellowoon - Das Geheimnis des Zauberstabs
Hero's Quest
Hippo Backgammon
Hitchhikers Guide To The Galaxy
Hollywood Hijinx
Hoyle's Book of Games - Volume 1
Holye's Book of Games - Volume 2
Indiana Jones and the Last Crusade
Infidel
Ishar - Legend of the Fortress
Ishar II - Messengers of Doom
Ishar III - The Seven Gates Of Infinity
Jewels of Darkness
Jinxter
King's Quest - Quest For the Throne
King's Quest II - Romancing the Throne
King's Quest III - To Heir is Human
King's Quest IV - The Perils of Rosella
Knight Orc
Lancelot
Leather Goddess of Phobos
Leisure Suit Larry - The Land of the Lounge Lizards
Leisure Suit Larry 2 - Goes Looking for Love
Leisure Suite Larry 3 - Passionate Patti in Pursuit of the Pulsating Pecto
Loom
Lurking Horror, The
Mac Pan
Magnetic Scrolls Collection, The
Manhunter - New York
Manhunter 2 - San Francisco

Maniac Mansion
Megaroids
Millipede
Mind Forever Voyaging, A
Missle Command (High res version)
Mission
Moonmist
Myth
Nord and Bert
Not a penny more, Not a penny less
Ogre
Oil Imperium
Ooze
Oxyd (high res version)
Oxyd 2 (high res version)
Pawn, The
Perfect Match
Perry Mason - The Case of the Mandarin Murder
Planetfall
Plundered Hearts
Police Quest - In Pursuit of the Death Angel
Police Quest II - The Vengeance
Psion Chess
Scapeghost
Seastalker
Secret of Monkey Island, The
Sherlock Holmes - The Riddle of the Crown Jewels.
Silicon Dreams
Sorcerer
Space Quest - The Sarien Encounter
Space Quest 2 - Vohauls' Revenge
Space Quest 3 - The Pirates of Pestulon
Spellbreaker
Spinger
Starcross
Starglider
Starglider 2
Stationfall
Stone Age
Suspect
Suspended
Tennis (high res version)
tex McPhilip - Road to Divinity
Time and Magik
Tonight the Shrieking Corpses Bleed
Trinity
Ultima II - Revenge of the Enchantress
Ultima III - Exodus
Voodoo Girl Queen of the Darned
Wind Surf Willy
WIshbringer
Witness, The
Wonderland

Zak Mckraken and the Alien Mindbenders
Zak Mckraken and the Alien Mindbenders (demo)
Zork - The Undiscovered Underground
Zork I - The Great Underground Empire
Zork II - The Wizard of Frobozz
Zork III - The Dungeon Master

and of course, you can always plug an SC1224 in to play color games. Hope
that helps! :)

Sure, thanks a lot for the list.
Are there some car race games in mono??

Guillaume.

Now that, I'm really not sure about.

Maybe someone else can answer?

Use this HotLink and make a list for your Atari Want List and I'll contact you! Sometimes something on your list may not be in my Atari Catalogs! Make a list of HardWare/Accessories, Games/SoftWare, Books and References for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added! Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or

Yes, that is great. The snapshot looks fantastic. Cannot wait
to get it so I can start putting together my new Falcon
system in my old Hades060 tower.

Use this HotLink and make a list for your Atari Want List and I'll contact you! Sometimes something on your list may not be in my Atari Catalogs! Make a list of HardWare/Accessories, Games/SoftWare, Books and References for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added! Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It helps me figure out your Atari needs and Interests. Feel free to fill out the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!

Hi,

Here is statistics about ARAnyM 0.9.8beta downloads, released 2009/04/25

Package	#	Architecture
aranym_0.9.8beta-1.etch_amd64.deb	87	AMD64
aranym_0.9.8beta-1.etch_i386.deb	91	i386
aranym-0.9.8beta-1.fc10.i386.rpm	84	i386
aranym-0.9.8beta-cygwin.zip	401	i386
aranym-0.9.8beta.dmg	354	Mac Universal (PPC/x86)
aranym-0.9.8beta-ps3.zip	39	PPC64
aranym-0.9.8beta.tar.gz	183	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.8beta/>

i.e. Linux (262), Windows (401), Macintosh (354), PlayStation 3 (39).

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

It's yours =3D)

Well it looks like the Coldfire computer will be built.
I have been asked to send in my first payment, 200 Euro's,
which is about $280. I am going to do so, but I am
disappointed that I cannot use my credit card/PayPal to
do this. I am going to have to do a bank transfer which
I have never done. Anyone done this before?

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the Most Common ST Disk Drive! And the case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Well I went to the bank and got things started. Turns out
I did not have enough information for them. So I went
home and was going to email Medusa to get the info I needed
and there was an email for me stating they had set up a
Paypal account. So I went and used that. Much easier...

Hi,

I was unfortunately victim of the YLOD syndrome with my PS3.

Here is the very sad video <http://eureka.atari.org/ylod.mp4>

It happened while I was watching "Dune" Blu-ray (a picture adapted from the well known scifi author Frank Herbert). Y.L.O.D. =3D Yellow Light Of Death. It means that the PlayStation 3 is broken. The ARAnyM's host is so expensive to get repaired from Sony, that I think I'll rapidly buy a new PS3 Slim to replace it. I think PS3 worth it :-)

The main drawback is that GNU / Linux is no longer available with the new hardware. It's bad news, and I will not be able to build ARAnyM myself, and submit official packages for future release.

Please apologize. The problem is probably caused by a too hot summer season, I suspect. I hope someone else will follow the job on PS3 ...

I'm sure that some of the PlayStation fans appreciated the ARAnyM port I've done on the platform, with the help of Gentoo developers.
<http://forums.gentoo.org/viewtopic-t-561746-highlight-aranym.html>

Here is the last screenshot <http://eureka.atari.org/screen_ps3.png>
Feel free to ask me if I can help building ARAnyM on PlayStation 3.

You're welcome,

Keep going !

> Please stop boring us with sony PS3...

I'm sorry, PlayStation 3 is a big-endian Cell (PPC64) hardware,
like the 68k CPU family in the ATARI computers. So it has an
interest to promote ARAnyM on this kind of machine, not so
present in the computers market. I hoped people understood,
if you don't. You may have forgotten your ATARI basic recipes.

I have Falcon30, Hades60, PS3, iPhone, Power Mac G4 all big-endian.

Did you noticed little-endian is so standard and untasty ?

You're boring !

 Yeah, being big-endian is absolutely the most important criteria by
computers. Only big-endian is good. All others are crap !  Now I go to
throw out all my PCs !
Thank you, not-boring man  :-)

No, but a few more details...

Is this on a Falcon ? CT60 ? bus accelerated ? any more details about
your system ?

What version of Eiffel are you using ?

Alan.

In the CT60 control panel you can select the "New boot" method for your
hard disk. That will then show the Eiffel version.

You can get the latest released one from Didier's pages at...

http://pagesperso-orange.fr/didierm/eiffel-e.htm

It's the 1.10 firmware. You can flash that to the device with the tools
that Didier provides.

Alan.

Sorry I did not understand you earlier I have made earlier and I used
the newest version of the firmware 1.10.

Best regards
Piotr

I use firmware 1.10 but the problem repeat again. For example
yesterday I shoutdown normally the system (MiNT) and everything it was
OK, but today when I run the computer I saw the Keyboard Failure. I
dont know why.

You could try going back to the "Old boot" method and therefore you
don't get the "Keyboard ..." messages at all.

Alan.

The WEB site turned into a classic blog.

Thanks. That's kind of you for Google searching.
Do you know about the *ATARI Search Engine* I'm maintaining ?

<http://www.google.com/coop/cse?cx=3D014753128619202207476%3Atzogojpdahi>=

More than 600 bookmarks to hit the ATARI scene. A kind of ATARI WEB 2.0.

Regards,

Hi everyone,

Just wanted to let people know I've started also making the ROM port
ethernet interface - EtherNEC.

They are available at http://www.freemint.org/ethernec/ethernec.html if
anyone wants one and it has a link to Lyndon's original pages.

Any questions, feel free to ask.

Thanks,

Alan.

Use this HotLink and make a list for your Atari Want List and I'll contact you! Sometimes something on your list may not be in my Atari Catalogs! Make a list of HardWare/Accessories, Games/SoftWare, Books and References for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!

Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Yes, Couples Retreat! You must see it on the TV Commercial! =-=Ben=-=

Sent from my Atari

---------- Forwarded message ----------
Date: Wed, 23 Sep 2009 07:25:51 -0700 (PDT)

Which movie? Couples Retreat? I've seen a poster for that but no sign
of an Atari Font (schmoltzy rom-coms don't seem very compatible with
the modernist style of the Atari font either).

---------- Forwarded message ----------
Date: Mon, 21 Sep 2009 21:49:55 -0700

Has anyone seen the Ads for the new Movie with Vince Vaghan? They use The
Atari Font. Has anyone seen this?

Hello,

I've been trying to post this but I am having problems with my usenet provider. I have found a source for Coldfire M5485EVB boards for $125USD each. It is an ebay auction here:

http://cgi.ebay.com/ws/eBayISAPI.dll?
ViewItem&item=180412905576&ssPageName=STRK:MEWAX:IT

The guy has around 14 of them now and I am willing to build a complete system to ship. The details are on my site here. http://www.atari-source.org/
node/72
You need to act quickly if you want me to build a system for you. If you do it on your own, you will need a lot of different resources in order to get the boards into a usable state with firetos. My price for the complete system is $500USD + shipping. If enough people buy them from me (around 10 definite preorders) I will be able to use the modest profits to buy Didier Mequignon one of these which will go a long way into ensuring support.

Please don't request one of these systems from me if you would buy the ACP machine ordinarily but won't now because you have this. Also please understand that the software/hardware solution is far from perfect and that this is a developer system first and foremost.

Thanks a lot for maintaining such a lot of nice ATARI softwares.
I must be grateful for the very good Smurf GPL, I do really enjoy.

But may I suggest you to test programs with the ARAnyM *miniPack*
<http://eureka.atari.org/miniPack.zip> that I'm maintaining ? 7up
that I was making usage in a previous version, seems quite difficult
with the new 2.33 release. You may see it by yourself, whatever host
machine you're using Macintosh or PC. I may test it on my own Hades 60.

I'm running nicely quite a lot of softwares with the miniPack, really.

I wish it can help you debugging.

Regards,

Hello,

Well, it seems it'll never end...
My disk crashed almost a week ago, and all my backups since I intalled
MiNT seem corrupted (or, maybe, only readable from a working
MiNT system with unix stuff ?).
I need to convert a partition to fat32 for easyMiNT to install, but
I can't find the utility for this. I did it once, and made a howto
that I saved... on the tapes that are no more readable. :/
I thought it could be something like mkfatfs, but the only thing I
could find only seems to run under MiNT (mkfatfs, within freemint
archive.
Anyone that could tell me where I can find how to do ?
And, this time, I'll keep it on different places and media...

Regards,

J.-Luc

Hello,

Is there any sort of interface that would allow me to use a CF or SD
card as storage on an ST?

I want to copy off all the files off my 3.5inch floppies but most of
them won't read on my PC (many are formatted for 82Tracks10Sectors).
Just thought this might be an idea to get round the problem.

Cheers
Ely

EasyMiNT does not need a FAT32 partition. Did you mean ext2?

EasyMiNT installs from a normal FAT16 partitions. If you want/need to
initialize a FAT32 partitions without MiNT you can use HD-Driver 8.2x.

Yes. I'm currently using 8.22 - but the install fails when trying to
copy the unix stuff to the so�created partition.

OK, it seems that EasyMiNT isn't the best way to do what I want.
Here it is :
1- all partitions from C to P are for TOS and must be readable by TOS
```

applications. So, no "exotic" format.
2- I may have to switch back to MagiC! in some cases - like now, as I need to access LFNs and run some applications that would not run correctly under plain TOS -, so some MagiC! related stuff may occupy some space on those TOS partitions.
3- MiNT unix stuff *must* install on a partition above P. As Q is reserved for archiving data before they are backuped, the next free one is R.

Now, what happens when I try to install :
0- R is partitionned as LNX type with HD�Driver 8.22 utility. Q is a 4095 MB partitionned as F32 type and contains ~3000 MB data at this time. Q is fully readable under MagiC!. No probllem with it. EasyMiNT folder with BASIC, NET and STANDARD packages is temporarily stored on O, from which it will be run.
1- if I run EasyMiNT from plain TOS, it will complain that MiNT must be started from AUTO folder, and bring me back to desktop. So,
2- I install a very light MiNT stuff on C, with cnf only launching XaAES. XaAES cnf itself only handles display resolution, sets HOME & CLIPBRD, and launches THING desktop. It might hardly be lighter...
3- Then, if I start EasyMiNT, it finds R as LNX and starts installing, achieving step 1/6. But, when at step 2/6, as it would create MINT folder on to C, it quits with error, because MINT already exists where it wants to create it. And I can't either erase this folder, as it is hold by the system at the time MiNT is running.
4- So, I decide to specify another temporary destination for MINT folder. It will be N until installation is complete, and then I reboot to MagiC! from which I erase MINT folder on C and transfer MINT folder from N to C. I do this, and everything seems to go fine (except I have to press ESC once when it creates the AUTO folder, and three other times after this step, else nothing seems to happen, no matter the time I wait), and the system reboots.
5- At this step, the installation ought to restart at the point it was before reboot, but as MINT is on N, it doesn't. So, I restart it manually and it begins unpacking and copying unix stuff to R, which it obviusly can't achieve, according to the error messages it displays until it ends. I reboot to MagiC!, erase the MINT folder I created on C and tranfer the one EasyMiNT created on N, then I edit both MiNT and XaAES cnf files to match the real place (C instead of N).
6- When I reboot under MiNT, it states that R has to be checked, then can't launch fschek, then tries to launch SH.TOS, which it can't find, and then reverts to it's internal shel, from which I can't do anything - neither execute TOS, PRG, APP programs, nor the SH and FSCHECK.SH stuff that are into C:\MINT\BIN -. I tried all this, the only thing I could do then was to type exit and reboot to MagiC!.
So, from what I could understand, R ought to be ext2 type, but as it obviously isn't, nothing can work.

I know there must not be much people that need to install to partitions above P... but, hey! it had to happen, hadn't it ?
Well, if anyone has any idea on how I could do this...

Regards,

J.-Luc

Well, it's funny, but I found a way to achieve what I wanted to do.
After I reformatted my disk 3 times and repeated as much times the
process I described in my previous post, I rebooted to MagiC! after
step 6 (see previous post) and accidentally deleted the EASYMINT
folder created on C:.
Then, I don't know why I did it, but I started again the install
process from O:, and all went fine straight to end - I had to press
the ESC key a couple of times, as I wrote it earlier, that's all -,
and now my system is running fine again.

I'm wondering why it did behave this way, but since the beginning it has never gone the way it ought to.
Anyway, now all seems fine, except for the CD-ROM drive that is not recognized though it works fine under MagiC! and Litchi that doesn't save the files after transfer is OK.

Regards,

J.-Luc

Hello,

there is a new version from SuJi.

- Some changes in the docu, Thanks to Peter A. West!
- SuJi use default values if it found an old "suji.inf"

SuJi is a replacement for MGSEARCH which is bundled with MagiC, but it can also be used under other operating systems.

<http://home.ewr-online.de/~gstoll/>

Gerhard

In addition, Gerhard built in a powerful customizable directory
listing function in the last edition - this works with
deeply-nested files such as often found on CDs which defeat most
other listing programs.

Regards, /Peter/

ok, so it was connected to a stereo or speaker input for better sound during game play?

Did it have a input and could you make your own samples with it?

>
> I've always wanted to use my HandScanner with TouchUp on the Falcon.

  Cart port on Falcon is basically same, "compatible". But it can not
be 100% compatible - Falcon has different CPU.
 Then, it is tacted faster.  If setting Falcon to 8MHz, STE mode helps
not, then it is SW incompat. problem very likely, and you can not do
much (except making working SW self :-)   ).

ok, the version of TouchUp that I have was especially made for use
on the Falcon. So I think it is sometype of hardware bug or problem.
I remember a hardware fix was suppose to be done, but never found
out if it ever came to be.
The Software works fine, except when it comes to Scanning, then you
get messed up scan. Have tried 2 different hand scanners and get same
result.

  Btw., to add to cartridge device list:  I made EPROM programmer for
ST cartridge port in 1987. I still have it, but not use, as made later
better one, for parallel port.

  PP
The better one works on ST or PC?

phantomm wrote:
> ok, so it was connected to a stereo or speaker input for better sound during
> game play?

Yes. I'm not sure, but I think the MV16 output was only mono. This output must be seen as a second "sound card" unrelated to the standard YM2149 output. I remember the MV16 output was only activated with digitized sounds and music during the game. It was absolutely impossible to get anything else from the card's LineOut (no soundchip, keyboard clicks, etc.).

> Did it have a input and could you make your own samples with it?

No, it was output only. And about the 16 voices... I'm pretty sure it was pure marketing. By looking to the replay routines on the forum I previously posted, it seems that it is able to output one 12-bit sample from a CPU interrupt routine. If all is here, it is far, far from the 16 DMA-driven voices we could imagine :-(

Both is possible. You can have a cartridge that installs a driver which
makes the cartridge show up as a regular drive - like a ramdisk or harddisk,
only read-only. In that case, it will use any available drive letter from
"C" up, just like any other disk drive - BTDT.

> You can put on cartridge any game what can stay in 128KB (but can SFX
> pack it of course), and is only 1, executable file.

Using bankswitching, you can have more then 128k, and with a driver that
maps the disk as a normal drive, this will be transparent to the application
- if it runs from harddisk, it will run from such a cartridge.

Those addresses may be free, but you can't use them on the cartridge port
because you have neither chip select signals nor address lines available to
decode/use them.

That's all correct. But we should clarify things about basic cartridge usage first - as Atari designed it.

In fact, you may install some RAMdisk with content depacked from cartridge ROM. Then is may be read/write in RAM, for temporal usage. And of course, it may be more than 128KB by using bank switch. Only that we can not write changes back to cartridge..... Wait.... It can be possible if we use Flash EPROMs. Even if write is not supported it can be achieved via tricks.
However, at this point we are almost reached attaching some CF card to cartridge port. - For sure it is much better considering price/ capacity ratio, and can have straight regular filesystem access.
Paskud done it years ago.

PP

Hello!

Here is the entry of BITS to Sommarhack 2009.
It shows a horizontal hardware scroll of a very
big 1280x200 logotype graphic, and 4 big balls
of 1bpp bouncing. YM-2149 chip music.

This demo works only in 1040STe,
(extended ST Atari Coomputer).

Download:
http://thebitsclub.tripod.com/BITS46-ST-20090628.ZIP

Goddbye!
SoLo of BITS (bits.atari.org)

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the

Most Common ST Disk Drive! And the case needs to be unaltered, not cut up
to replace a drive with an incompatible eject button. Please direct All
replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974.
I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer:
I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that
again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it.
I want the Mega to come that way from the factory. I don't trust most
other peoples tech work. I'd rather have the RAM put in at the Factory.

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Hello,

Just wanted to say that I hope everyone here has a SAFE and happy 4th
of July. In my area, South Bend Indiana, it is suppose to rain so I
expect an indoor celebration. Take care all.

Hi everyone,

Just wanted to let people know I've started making the PS/2 mouse & keyboard converter - Eiffel.

They are available at http://www.freemint.org/eiffel/eiffel.html if anyone wants one and it has a link to Didier's original pages. I've already shipped quite a few to folks over at the Atari Forum pages if people want to look at those to get a feel for things. Any questions, feel free to ask.

Thanks,

Alan.

I looked into USB about 8-9 years ago.

As far as I can remember there are three different levels of driver
OHCI and EHCI etc. The more sophisticated ones require less work to
be done by the CPU which is probably better for a 680x0 based
stack.

I tried to find some info on the BSD websites that might point in the
right direction but drew a blank.

Everyone told me it is not an easy task to add USB into the kernel
but since it has been done for Linux and various BSDs there must
be some expertise out there and maybe someone who would enjoy
implementing it again ?

Peter

As 266 MIPS is much faster than the old Sparcstations where Java run
initially: yes.

It depends on what you mean by �some degree�.

Hi,

I have a problem with H2O (falcon game). When I launch this game I see
Intro and It is OK, but next press space key, play and enter my name,
the game is crashed, black screen and music is crashed. Does anybody
know what is the problem. I try to run on the clean system with control
key during the boot computer, but the problem is the same.

Best regards
Piotr Mietniowski

Dunno. Firefox is in my opinion bloat software. Just look at it using an
older X11 Terminal -- you'll see frame by frame and border by border
drawn ... unusable.

Perhaps Epiphany is faster. Or a browser integrating the WebKit engine.

When I've used a lightweight browser on slightly older machines, it's
usually been Skipstone. Seemed to work out pretty well, but it does
involve having GTK on the system.

Yesterday I solved a problem with this game. It is very strange, because I can run this game but another disk driver with HDDriver it is not working, I can try it with ICD and everything it is OK.

Hi all,

After a rather long period of no real news on my webpages, I decided something needed to be done about it. I have noted over time that updates have been slipping, often due to the fact that it involves more work to maintain a website consisting of handcrafted HTML-pages - especially when a site spans over wide areas such as icons archives, software support pages and so forth.

That is why I came to the conclusion that a Content Management System of some kind was needed to allow for easier maintainance. I did chose Joomla, since it seemed to be flexible and powerful enough and also is free to use. The downside with going the CMS route might be a loss of the original website feeling. However, when considering the option being a less frequently updated website with decreasing value to visistors I think the chosen path will turn out for the better.

What about The Orphaned Projects Page? Well, when working with moving all the website content for my www.ataricq.org page, it occured to me that moving the source codes to the very same website would make things even more convenient to handle - not to mention the advantage of suddenly having all of the TOPP sources available in catagories, and fully searchable through the website search engine!

Anyway, please have a look at the revamped website, and do let me know how you like it, or if there is something you find is missing.

Check things out here: http://www.ataricq.org/

Thanks,

/Joakim

From my experience after hard disk adapting a lot of games: Hddriver
is not best for gaming. If Timer C (200Hz timer) is stopped or works
different as is in regular TOS - Hddriver will stuck. It happens only
after game start, when it changes timers, vectors. So, if game needs
hard disk access (loading some files) after start it may happen that
game will stuck with hddriver. Examples: Defender 2, Dark Castle,
Car Vup etc.
I made some small TSR program which fixes it by reactivating Timer C
before hard disk access and restoring it's state after (for game). I
will post it on my site with source.

However, I use my hard disk driver for gaming and everything... It is
made to be not sensitive on Timer conditions + some other gaming
support things.
I will check H2O on my Falc...

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out

the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References! FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST or Both! Hi,

I have some interesting but unused stuff for the Atari Falcon. Unfortunately my Falcon died years ago. Maybe someone is interested in:

Steinberg C.A.C (Cubase Audio Clock)
Steinberg FDI (Falcon Digital Interface)
Line Audio Design Jam OUT 8 (Falcon 8 channel D/A convertor, 18 bit res., 8 outputs)

just let me know.

Martin Tarenskeen

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's almost 700, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by webmasters adding the HTML code

```
<CENTER>
<form action=3D"http://www.google.com/cse" id=3D"cse-search-box">
   <div>
     <input type=3D"hidden" name=3D"cx"

I regret that I don't know the current draw of the screen or original
HD.  I am skeptical of your idea though, since the STacy's screen
seemed rather low-contrast, and I remember that those screens were
relatively low-power back in the day.  The solid state idea might be
more of a help.

Galen

If I recall, there are two screws under the STacy logo on the face
that are needed to get enough cable slack to disassemble.  It has been
too many years to clearly recall, although I do remember it being a
difficult job.  May I suggest searching the deja.com archives?  This
link may help:  http://atari.st-katharina-apotheke.de/home.php?lang=3Den&he=

Not just by plugging them in -- but it's not impossible.  Some people
made adapter boards.

Galen

I regret that I don't know the current draw of the screen or original HD. I am skeptical of your idea though, since the STacy's screen seemed rather low-contrast, and I remember that those screens were relatively low-power back in the day. The solid state idea might be more of a help.

Okay, thanks for the reply Galen. I've still got a lot of ideas/plans for
my STacy... I'm actually pretty excited about it! :)

The LCD itself is not a problem. The problem is the EL backlight.
Replace the EL film (which is quite dim on most Stacys anyway by now)
with a sheet of reflective film and some LEDs. This will improve the
backlight and reduce the power consumption significantly.

I thought the Coldfire will be running at 400 MIPS. At least, that is
what is in the docs.

That would be nice if the Coldfire could run FireFox. If so, I would use that as my browser instead of Highwire (good program, but needs Java support and the ability to do online buying/banking). Are we talking about a Mint version of Firefox or a Linux version? I have the latest version of Linux for the 68000 series on DVD. Had it working fine on the Hades060 before it went bye-bye.

The ColdFire MCF5474 processor (the one that will be on the ACP computer)
runs at 266 MHz for ~400 MIPS.

> Sure, but the USB cards on Milan or Hades are surely not USB 2... and AFAIR,
> I never heart about USB connectivity on Milan and Hades

There are no USB drivers on Milan or Hades. However, these machines have PCI, so the hardware is there. I don't think it's possible to buy USB-cards today that are not USB2... The hardware is not a problem, the problem is that nobody has written a USB-stack and hardware drivers (yet). The problem is the USB stack - this is where 90% of the effort has to be spent. Once the stack is up and running and is capable of loading hardware drivers, it will be "easy" to support a variety of USB interfaces.

> Who can connect a keyboars, mouse, memory stick, camera, web cam, HDD ???
> Nobody I think = no drivers available.

I'm not sure how realistic camera-drivers etc is. These usually requires custom drivers. It's easier and more useful to create drivers for HID-devices and mass storage devices, then you will need only one driver to support all USB drives, one to support all mice etc.

In my opinion, you don't have to do this. People who claim "if you
don't give me the HW I wont make SW, period." are not worth of it.
From pragmatic point of view -- for me is more acceptable losing one
SW developer who don't want to pay for HW in advance than losing one
HW developer (you ;-) who wont have money for his development because
he was forced to give his HW prototypes for free.

Anyway, I wish you good luck with CTPCI!

Honestly, whole this thread, or at least 'part' about USB drivers
offers nothing new, nothing not said in past.
People come with ideas how to do it, but nobody wants to do it.
Talking about reasons why we 'lost' SW developers is maybe something
what could be worth. But I doubt that 99% of Atari people is capable
to accept facts, to realise where we are and why we are there...
Much bigger projects, with 1000 times more people involved are dead
now, because of lack of SW. Remember BEOS ?

Whole idea of competing some Atari clone, expanded Atari with modern
PCs is bad, that's my opinion. Things are now too complicated. It was
relative easy before 18 years to make some IDE or SCSI IF, PS2 mouse
adapter etc. And SW for it.
Now everything is much more complicated. But prices are low thanks to
custom chips and mass production. And demand for new SW will never
end. There is always something new, requiring driver. Today camera,
printer etc. Tomorrow: cellar phone connection and who knows what
all... Like you it or not, it is big business, and only mass
production can assure low prices and required SW, drivers.

Just one thing more, considering USB on Ataris: I bought some USB chip with 8-bit data bus, DMA compatible about year ago. With idea that it will be good for ST's ACSI port. It is only USB 1.1, but USB 2 has no sense with slow ACSI. So far did nothing of SW for. HW part is pretty simple, but I really don't have some need for USB while I have possibility to attach CF card, PS2 mouse on ST, STE, Mega STE, Falcon.

Looking for someone to retrieve some old files off of some MFD-2DD 1MB
3.5'' floppy diskettes formatted for Atari ST. You can keep a copy of
any files retrieved. Not expecting 100% recovery and don't want
anything more serious than just trying to read them using regular
equipment.

Regards,

Yimin

Greetings,

Does anyone know if a TOS cartridge was made for the ST?

If so, any info on it would be interesting to read about.

Also, I'm interested in any known past uses if any, for the
"cartridge" part of TOS.

Example, on ST with no hard drive connected, if you try to ad a Drive C: it relates to "cartridge".

Is this "cartridge" connected in TOS to the actual hardware cartridge port?

Or,

Is this "cartridge" something different?

Explain if possible.

While on the subject....

Where there any ST games released on a cartridge, if so what are the names of them.

If any ST game cartridges, anyone know the type of chip(s) that were used in the cartridge?

you can e-mail me if you do not want to post .\phantomm@bellsouth.net\.

> Does anyone know if a TOS cartridge was made for the ST?

I don't know, but I would assume that there is no such thing. You can
only address 128kb on the cartridge port, which is far less than TOS
requires.

> Example, on ST with no hard drive connected, if you try to ad
> a Drive C: it relates to "cartridge".

> Is this "cartridge" connected in TOS to the actual hardware cartridge port?

Yes. You can connect a ROM to the cartridge port, and depending on what

you put in the header on the ROM, it can be available as a "disk" on the
desktop.

And btw I think that "c" relates to the cartridge and "C" to partition C
on a hard drive.

> Where there any ST games released on a cartridge, if so what are the names
> of them.

I don't know. The only program released on cartridge that I know of was
FaST Basic. The cartridge port was mainly used for stuff like samplers
and video digitizers.

I clocked it at 12Mhz. The only thing I had to do was to feed the ACIAs with 500kHz and the floppy controller with 2Mhz. It doesn't work with an external monitor connected though.

If I still had a Stacy I would upgrade it to 4Mb, add an IDE interface and replace the HD with a CF-card. Then I would leave it alone :-)

I really would be interested in such projects!

Upgrading the STACY to 4Mb (I have seen a web page) looks a bit hard for me: the guy says that you have to unsolder the previous ram chips.

But something to change the LCD screen would be great!

Guillaume.

As is said, cartridge has no enough space for TOS. In theory, it could hold some TOS extension, update, but I never heard about such.

However, there is little confusion with that 'C' for cartridge. It is shown as low case 'c', not capital. With reason - it is not like C drive (hard disk). Cartridge handle in TOS supports only access to executables from Desktop. You can not open some other file. So, it is not equal as partition C. And it is logical, as c and C is actually same for filesystem. In other words, cartridge holds not regular files.

There are few games realised on cartridges, but not from big publishers. Actually, cart port for gaming, SW is not really interesting on Atari ST. It was popular on machines without floppies. And with hard disk it has especially not sense.

Usually, you have only EPROM chips with proper content on cartridges. ROM cartridge can operate in 2 modes: diagnostic and TOS mode. And I think that diagnostic is where it is most used - for helping finding what is broken in Ataris. In TOS mode it is possible to set at which point of startup program activates, so can hold some drivers which will install before AUTO run - such is Paskud (IDE IF for cartridge).

Cartridge is intended for EPROMs and holding some smaller SW by Atari, but as we see there are some special things made for. Beside paskud was IDE CD ROM IF, digitazers etc. Now we have some Ethernet/USB IF ...

Considering games on cartridge: if you want something like that, and I saw that people thinks that it is cool idea, here are some hints:
You can put on cartridge any game what can stay in 128KB (but can SFX pack it of course), and is only 1, executable file. There is a lot of such games, and it is possible to 'singlepart' many of them. Then you can run them from cartridge, whether with AUTO start, whether by double-click.
For instance: Battlezone (Atari) is short, and one part.

P.S.
Actually, you may have some data file (not executable) on cartridge.
But can access it only directly - with reading from proper cartridge
ROM address. So, same game may access some data directly, as binary
data from cartridge. But I think that better way is to make one-
parted executable, where datas are integrated.

ok,

That helps alot.

When I mentioned TOS on a cart. I was thinking of a older version of TOS.
Something like TOS 1.4, doesn't it only require around 192K?

Also, was TOS 1.4 released in a 4 chip version?

The one I have already has the 4 megs. (from Factory)
I have a switchable 8/16mhz 68000 board (Fast Technologies),
that I plan on installing if it will work. Have to desolder the
original 68000 chip.  Before I do that, anyone know if there
would be a problem running it at 16mhz?

Changing out the LCD to something better would be nice.
And if one could get sometype of graphics card to work in
there....

Not sure about having to unsolder the previous Rams. If it is a original 2
meg machine,
I thought it was possible to upgrade by just plugging in the right memory.
Not sure if

thats correct. The last 2meg one I saw did seem to have a socket in the Ram
area.
Finding the right memory board may be a problem.

If you could find a broken 4meg unit, all you have to do is just unplug the
whole board
which holds TOS and the RAM and plug it back into the good machine.

As you probably know, It is just a large single board that holds the TOS and
RAM.
With 2 connections that plug into the main board. Similar to a Falcon Ram
Card in a way,
but on a larger scale and with the TOS of course.

My 4meg Ram does have some wire or jumper connections.

What type of IDE interface? Where can I get one? 8-)

Did yours have a Bus Connector?
My board has a place for one, is it as easy as soldering in the Bus
connector or are
there more componets that would need installing?

IIRC, the Bus connector, suppose to be similar to the Mega ST Bus?

That's true, but you can't put more than 128K on a cartridge.

Nowadays I think you have to build one yourself... Another option would be a SatanDisk connected to the internal ACSI-connector. Then you can get rid of the ancient SCSI-disk and the SCSI interface.

You can also replace the EL backlight with a reflective sheet and some LEDs. If you do this you get rid of the two major power consumers in the Stacy - the disk and the backlight. Fitting a battery might make sense now :-)

> Did yours have a Bus Connector?

I don't know, I don't own a Stacy anymore. I had three, sold two and broke one :-/

> My board has a place for one, is it as easy as soldering in the Bus
> connector or are
> there more componets that would need installing?

I have no idea, but if it's the same as the Mega ST bus then there are some buffers involved.

What do you want to connect to this bus?

I had an ICD AdSpeed16 in one of my Stacys. It worked fine.

A tip when removing the old 68000: Cut all the legs, then desolder each leg individually. If you don't do this, there's a good chance that you'll lift or damage some tracks on the motherboard.

> Changing out the LCD to something better would be nice.

Forget about this, unless you manage to find a 9" VGA AND a graphics card. The LCD in the Stacy is not bad, but most Stacys have burned-out backlights by now. They use sheets of EL-film which are powered by a transformer on the PSU regulator board. The film wears out and the screen goes dim and virtually unusable. Replacing the EL-film with a new one (or even better, reflective backlight sheet and white LEDs around the edge) will do wonders.

> And if one could get sometype of graphics card to work in
> there....

Good luck! ;-)

>
> Also, was TOS 1.4 released in a 4 chip version?

Right, TOS 1.04 (and 1.02, 1.00) require 192KB. They were placed in beginning in 6 (EP)ROM chips (32KByte), later in 2 (of bigger capacity, 128Kbyte, but filled only 75%).

Original cartridge design is for 4x 32KByte EPROMs, but it went obsolete soon, so many cartridges are with only 2 64KByte EPROM + simple logic for correcting chip select. I saw even pic of cartridgde with only 1, 16 bit EPROM of 128KB, but such EPROMs are guite expensive and hard to find.

Of course, with bank switch is possible to have practically unlimited data size, but it is not good for many of SW, so not good for TOS, because that SW is made for linear addressing.

All this is not much relevant this days, I think. Cartridge for storing SW in hard disk era is not interesting.

I can make cartridge adaptation of some game - 'Revenge of Mutant Camels' seems as good idea - packed, it will occupy about 127KB. With source code and comments, so may see how it looks. And try it... even if no ST, EPROM programmer etc., you can try it with some emulator (Steem, Hatari).

PP

According to the Compendium:

ROM address is at FA0000 to FBFFFF (128k)

but just before: addresses from F00040 to F9FFFF are unassigned (640 KB)

ANd on machines after TOS 1.06 addresses from FC0000 to FF7FFF are free
(224 kB).

Grouping those 3 consecutive blocks (decoding all the addresses with a
bit of electronic) could lead to a 128+640+224 = 992 Kb of ROM.

Guillaume.

Hey Jo. The STacy has an internal ASCI connector already in place?

Yes. The SCSI card is an ACSI->SCSI converter that is connected to an
internal ACSI port.

In message <_jb0m.58764$b9.34477@bignews6.bellsouth.net>, phantomm@bellsouth.net said:

>Does anyone know if a TOS cartridge was made for the ST?

Don't think so - at least not by Atari.

>
>Also, I'm interested in any known past uses if any, for the
>"cartridge" part of TOS.

The main uses were for plug-in scanner and audio/video digitizer hardware, also clocks/calendars that kept going when the machine was off, a VT100 emulator and a very crude Basic (FaST Basic). There were several versions of the Ultimate Ripper Cartridge used for extracting data from files, also some MIDI add-ons, IIRC. Atari also made a diagnostic cartridge for the ST range, though in theory it was only available to distributors and repairers.

>Example, on ST with no hard drive connected, if you try to ad
>a Drive C: it relates to "cartridge".

Only when you use a lower-case 'c'!

>Is this "cartridge" connected in TOS to the actual hardware
>cartridge port?

Yes, in a way; actualy connected to the main bus.

Regards, /Peter/

Oh wow - so it should be dead easy to remove the card (I'm not using mine
anyways - hard drive died and have been using a SatanDisk), and use the
SatanDisk or upcoming UltraSatan internally, right?

Thanks.

 As usual people comes with ideas, but not much concrete, something
what can be done simple...

I made page about ST cartridge port usage, programming.  There is a
working example how to put some game on cartridge.
Everyone can try it with some emulator - Steem, Hatari. And those with
EPROM programmers, cartridge on real machines.

http://ppera.07x.net/atari/CartST.html

There will be more stuff by time...

PP

No problem. You can find the pin-out in the Stacy schematics.

> What do you want to connect to this bus?

It will depend on what will work with it. There is a door on the side of the
STacy, and holes for
the connector on the MB. They must have had something in mind and dropped it
for what ever
reason. Probably due to lack of power with the battery.
Thought I would explore the possibilities while I have it apart and doing
the CPU upgrade
and etc.
I have paper info, that shows the Bus Port connected. The article describes
it as a "special bus port" with the same connections as the internal Mega
Bus port; the pinouts
are different from the Mega plug, but electrically, it's the same.

I would think any thing that works on the Mega ST Bus would work on the
STacy if the pins
are wired right.   Why would they have the pins different?

That could be a sampling cart. I have a couple. I also have BATT II, a
game that came with a single channel 16 bit sound card iirc.

I started to order Batt II years ago, I may have a copy of the game, was
the card needed to play and what did it do if you recall?

that's much appreciated.
Would you happen to know anything about the differences between the
ST cart port and the Falcon cart port?

Some ST carts will work with the Falcon and others like HandScanners don't.

I've always wanted to use my HandScanner with TouchUp on the Falcon.

It is the MV16 cartridge, shipped witt he BAT game (or BAT 2 ?).
http://www.atari-forum.com/viewtopic.php?f=19&t=9824

It is a sound card with a LineOut output (3.5 jack ?). Someone lent me BAT
long ago. I remember the sound had a quality similar to the STe DMA at lower
frequencies. It was used only by the game. I may recall that some
soundtracker used it, too, but I can't remember.

Hangon, I have a box of ST software sitting here, BAT, with an MV16. Its
8 bit 16 channel. No mention of frequency, but I think it was 12.5khz.
And yes, you could play it without the cart too.

Cart port on Falcon is basically same, "compatible". But it can not be 100% compatible - Falcon has different CPU.
Then, it is tacted faster. If setting Falcon to 8MHz, STE mode helps not, then it is SW incompat. problem very likely, and you can not do much (except making working SW self :-)   ).

Btw., to add to cartridge device list: I made EPROM programmer for ST cartridge port in 1987. I still have it, but not use, as made later better one, for parallel port.

Problem might be parity. Stacy is no parity, and even drives with a no parity jumper do not work some times. One work around, if you can build small and neat, is a parity generator chip. If you can wire one of those in, you can use a drive with parity.

Guillaume Tello <houten.van@orange.fr> writes:

: Hello,

```
: I have open (at last!) my STACY and wanted to change the HD.
: I have a SCSI 160MB that runs well on the TT.
: I put it into the STACY and get a strange problem :

: when powered on, it signals a short-circuit! (is it the right word? I
: mean that electricity is connected from + to -) and the alimentation
: makes a caracteristical noise.
: If I just unplug the power cord of the new HD, it's ok.

: But this HD worked few minutes before!!!

: On the main board I can read +5V, gnd, gnd, +12V and the four wires are

Yes I have to pay them also, but I told them to let me know when. They said they would. I just saw a picture of the board and it looks great.

I have one of those. I bought it with the intention of playing with it
in my Milan, but so far I haven't had the time to look into it. I don't

know much about USB at all, so I have no idea how much work a
stack/driver will require. A lot I guess ;-)

ok, I think there are 2 programs with the same name. Or same program with
different
labels. Just trying to clear something up. Thanks.

Hi,

Here is statistics about ARAnyM 0.9.8beta downloads, released 2009/04/25

Package	#	Architecture
aranym_0.9.8beta-1.etch_amd64.deb	42	AMD64

```
aranym_0.9.8beta-1.etch_i386.deb         27                         i386
aranym-0.9.8beta-1.fc10.i386.rpm         70                         i386
aranym-0.9.8beta-cygwin.zip             274                         i386
aranym-0.9.8beta.dmg                    217     Mac Universal (PPC/x86)
aranym-0.9.8beta-ps3.zip                 27                        PPC64
aranym-0.9.8beta.tar.gz                 122        Platform-Independent
```

The download page is
<http://sf.net/project/showfiles.php?group_id=3D41106&package_id=3D33298>=

i.e. Linux (139), Windows (274), Macintosh (217), PlayStation 3 (27).

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

It's yours =3D)

I'm looking at the Disk Label right now, there is no chameleon on the label!
It's an APX Title with an APX Manual with Rainbow Colors on the cover! It's
about a 26 page Manual!

Yeah.....I'll be buying one when....A) I have $800.00 USD to spare and
B) When I see how it actually fits inside a tower case, and how well
it runs exitsting Atari software.

Having said that, I am pretty excited about the project!  I'm hopping
it really ignites the Atari community!! ::)

   I guess that it is intended for some CT board.  And will be not
usable with 'ordinary' Ataris as ST(E), stock Falcon, TT - because
that NEC chip is for PCI bus.
  How about HW interfacing ? Do you have some literature about using
and interfacing PCI bus on CT, some Atari clone ?
All it is necessary for making driver...

  PP

Would like to know if anyone is using Papyrus X, and their opinion of
it.  Also, how much better is it than previous versions of Papyrus.

Thanks!

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BenSells.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Use this HotLink and make a list for your Atari Want List and I'll contact you! Sometimes something on your list may not be in my Atari Catalogs! Make a list of HardWare/Accessories, Games/SoftWare, Books and References for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added! Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It helps me figure out your Atari needs and Interests. Feel free to fill out the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

ok, I found what I was looking for, there is more than 1 program with that name.

btw Ben, do you have any new 5 1/4 floppy disks for use on a atari 1050 drive?

Nope, just like a Timex, takes a licking and keeps on ticking. :)

> When can we expect new ST hardware?

Any day now:

UltraSatan
Svideo devices
CTPCI

PeST and JeST:
http://pest.atari.org/
http://www.atari-forum.com/viewtopic.php?
f=15&t=16066&sid=16fa037550da5e5c132271d9b7e0a9c7

Lots and lots of STuff... :)

That's pretty nice (except prices :-)   ). Question regarding USB
usage: do you plan to use some existing, on market available PCI USB
cards (with NEC chip), or you will make self some ? Then, considering
that it will work only with PCI board: what is expected user base,
how many people will really use it ? I ask it because of drivers, and
chances that they will be made really ... I mean, it may be serious
drawback for programmers. Choosing PCI USB. By using some more
compatible USB solution, we could make driver usable on much more
diverse Atari machines.

Actually I have 115 orders for CTPCI.
Yes I'd like to see a PCI-USB card driver available (
Nec uPD720101 is a good chip)...
Buit who want to do the driver (linux source are ok) ?

The price is what he has to be if you want I continue to design and spend so
much time on this activity...
Just the prototype cost 900 EUR !
Think about this.

Regards

Yes I hope this is a start with things to come. I am now debating whether to use it as a stand alone computer or to put it with another computer like a Mac. I like the idea of being able to use it eventhough the main computer is turned off.

Hopefully we will not a repeat like the Hades060 with the first batch
being sent out with problems. I hope Fredi learned his lesson and will
strive to make it all right in the first shot.

Yes I have and use Papyrus X. Great program and the best wording processing program for the Atariline of computers. It beats of the previous versions hands down. Lots of nice features.

I understand why prices are so big. But it will not help me to earn
money, especially not this crisy days :-)
Let's say that I want to write drivers. Then I need CT60/63. I need
PCI board... So, I must spend some hunderts of Euros now, to earn
maybe 2-3 times less Euros after couple years... It seems not as good
idea :-)

I don't care for Linux sources. I do everything in ASM for Atari. All required info is available to make USB drivers. But it is really complex thing, and big task. People talks about worth of 50000 $ for such drivers. It is of course price for some firm, with all taxes, etc. Still, I'm sure that making only drivers for PEN drives is at least 100 hours of heavy work.

It would be better to do at once some universal driver, for wider machine base. But likely it is just a dream, considering that we don't have unique way of interfacing some faster USB on diverse Ataris. ACSI port would be not good - Falcon has no it. Catch 22.

I haven't pre-ordered, but I definitely plan to buy one. I hope to make a laptop out of it :-)

I don't think hardware drivers will be the major problem. Once the USB
stack exists, writing hardware drivers will (if the design is right)
not be that much work.

You speak like the atari domain is a business market....but it is just a fun domain.
No business here...
And it is why we have so few drivers authors...

I announced that I will propose a special price on CTPCI for developers who want to write something like a driver...
I cannot give hardware to them...
People who buy atari hardware to me know that they encourage me too...if I lost money what is the sense...?
Some people did some fantastic things on CT60 and just for fun & free...
On my next atari project I will try to furnish freely the hardware for a certain period of time and let choice after to the 'developer' to buy it at lower price or to send back.
It will be the better I will be able to do...

The USB driver on atari stills the biggest missing !
The EtherNAT has 2 USB ports but after 3 years we only can connect a mouse...
Not enough...
We need too keyboard, memory sticks, camera, external drives,....

Furthermore, the RAM will be soldiered on the ACP board, it will be rock solid, no bad connections :-)

I was skeptical at first, but the association ColdFire + FPGA makes the ACP board very powerful and extremely versatile ! It could be reprogrammed as a "hardware" emulator for virtually any older machine. The small size and the very low power consumption of the board certainly makes it suitable for a laptop.

Look at what this guy does with an original C64 board:
http://benheck.com/04-05-2009/commodore-64-original-hardware-laptop
Imagine such thing with the ACP board :-)

Since I did not obtain EtherNAT I am still missing LAN on my Falcon.

Can we connect some PCI LAN card to CTPCI? Is there any driver for PCI network card for atari?

thanx Rodolphe!

Nice to read you !

I will use the NEC uPD720101 chip.

Bad choice because memory chips are very more expensive than DIMM modules
that are produced at very large scale.
Here they will buy some very small qty of memoru chip (DDR) and pay the max
price !

Very bad choice for final cost !

Hi,

I have ethernat and have begun to work with USB on it. I have no idea
if I have what it takes to make a complete USB architecture but we'll
see.
Thanks,
Mark

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the Most Common ST Disk Drive! And the case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!
FREE Catalogs @ http://BenSells.Atari.org or http://BensCatalogs.Atari.org or
Catalogs Requested by E-Mail at Atari@aracnet.com or BenSells@Atari.org and
Please Specify Atari 8 Bit, ST or Both! Or Call Ben anytime at (503)256-9974!

There are free PCI LAN-drivers in FreeMiNT. They should - in theory! -
work fine with CTPCI as long as CTPCI has a Hades/Milan-compatible
PCIBIOS.

Rodolphe Czuba <rodxxxxx.xxuba@free.fr> wrote:
> Nice to read you !

> I will use the NEC uPD720101 chip.

I have a PCI-card with a compatible chip somewhere which someday may make it into my Milan. My brief studies of USB suggests that only a small part of an USB solution will be hardware dependant. An USB stack with loadable hardware drivers will make it easy to support new hardware as long as documentation is available.

If you use a Hades/Milan-compatible PCIBIOS in CTPCI any driver should in theory be binary compatible. That would be easy to test using FreeMiNT and one of the PCI LAN-drivers :-)

I'm vaguely interested in building some USB tools as well, but I don't
yet know what my work schedule will be like to be able to commit much
time (it's been hectic for the past two years or so, but I'm hoping that
it'll calm down next month). Maybe email me with more details?

Indeed :-) A friend of mine is also going to buy one just for this
reason. I don't know anything about VHDL/FPGA but I think it will be an
interesting experience. The MSX One-Chip became a cult classic because
of this.

  Rodolphe, you are who proposed money for SW authors,
remember ?   :-)
Actually, myself expect not money to making some SW for Atari people.
As I made some things for free always. But I don't want to make SW
and while it to spend some not small money ... That's the problem. I
do not agree that making drivers is fun. It is hard task, and will
make person involved obligated for longer time. Plus, it is not
possible without having real HW - you can not make SW without testing.
Even if we have all USB-stack code perfect working (what I doubt)
making low level, HW specific driver is a lot of work. Therefore I
said that this is Catch 22 - you talk to not want to loose money. I
say the same :-)
Also, I don't expect any HW cheaper, or loaned. It has no much sense,
especially not in advance.
I'm not interested for some Atari clone. I only play sometime games,
and we know that not much of them runs on fast clones. What is with
all those people who bought CT6x ? Nobody of them can programming ?
 We just need to realise what is known for decades: that SW for
microcomputers may cost more than HW. But Atari people is used to have
almost everything for free... This moment I see as only way for USB
that it will be commercial SW, with price, and sold, similar as
Hddriver.

Sure, but the USB cards on Milan or Hades are surely not USB 2... and AFAIR,
I never heart about USB connectivity on Milan and Hades

Who can connect a keyboars, mouse, memory stick, camera, web cam, HDD ???
Nobody I think = no drivers available.

I will support the authors on a new project by GIVING the hardware...
I mean a hardware with integrated Ethernet and USB chips...
If I do a new hardware...what is not the actuallity... now it is CTPCI that
must become avalaible.

> You're inserting version names of TOS and breaking up the order

That's true.

> That's confusing. Really.

A littel bit. But there also a TOS 2.95 and 7.0x which are not form Atari.

> So, I decided to put there something not present, something between 2
> numbers.

Maybe the wrong the number? 1.06 ist for the STE and also the 1.62. For what machine is for what is the 1.08.

> TOS version numbering should be for both GEMDOS and GEM, as I know.
> There are separated version numbers for AES and GEMDOS.

A short part form the tos.hyp.

version	date	name	GEMDOS	AES	
1.04	06.04.1989	Rainbow	0.15	1.4	
1.04	06.04.1989	KAOS 1.4.2	0.16	1.41	
1.04	06.04.1989	KAOS 1.4.3 (08.06.1994)	0.16	1.41	
1.06	19.06.1989	STE	0.15	1.4	
1.62	11.01.1990	STE	0.17	1.4	
2.01			0.19		
2.05	05.12.1990		0.19	3.10	
2.06	14.11.1991		0.20		
2.06	10.03.1992				STBook
2.95	26.04.1996		0.20	3.20	Tos2Win

Can someone tell me the GEMDOS and AES version form a STBook TOS?

> If someone has idea how to achieve that SYSINFO will outprint my
> name (instead 'TOS') when detects running OS, let me know :-)

If you have the sourcecode... ;-)

You can do something like EmuTOS, this add a four byte name to the end of OSHEADER.

  I currently do some enhancing, patching of  GEMDOS 1.5 part of
Hybrid.  So, there is now DMA sound detection/init and mixer init, IDE
boot, cookies - with showing if machine is STE, and if has IDE IF.
Changed floppy bootsector layout, so it will have 3 sectors long FAT
instead dumb 5. Need yet to patch date XBIOS functions to Y2K
compliance. Then I will test it on STE and submit with source code,
where are some comments, explanations added.
Did couple color changes in Desktop (v 3.10), so it will be visible
'from plane' what is in question...

So, this is for ST (only capable to access area at $E00000) and STE
machines. Maybe will work on Mega STE too. But it is not so important,
I think. MSTE has different serial port, and I will not bother with
patching it.
There is now 8KB free space before AES part in ROM, and more at the
end. Almost 2 KB free in RAM, so may add many things yet...

It's not bad idea to add some name/signature in last 4 unused bytes of
OS header.  Maybe PPTM (PP TOS monkeying ;-)   ).

That's too much then. No confusing facts would be better and it is so
easy to choose a name that is unique. And can be easily found with
search engines.

'Official' name from now is ppht (sorry, no capitals !) or longer
variant: pp hybrid tOS :-) Even longer variant I will not write here
considering Worldwide economic crysis :-)

But Sysinfo will still show it as TOS 1.08. Even if I make some new
sysinfo, most of people will still use old one.

I think that we talked too much about less relevant things. Really
interesting things will just came later...

Think how to call low RAM use-less (not useles !) GEMDOS variant.
How to call DOS compatible FAT16 handling in GEMDOS ?

Just one thing: If you choose 1.04 for compatibility reasons, why change the version number? Won't this confuse some of the games/demos you attempt to stay compatible with?

I saw only couple games which check TOS version. And I did not change relevant thing: GEMDOS version # . There is Trap #1 call for get it, and PRG will get version of GEMDOS used in TOS 1.04 (0.15). GEM version may be relevant for few games using AES (Deja Vu, Sim City, Psion Chess... and I can't recall more), but I don't think that they will check TOS #, but rather AES version with proper AES call.

Compatibility with majority of games means not following the rules set by Atari (not always consistently). Problem is usually exactly that programmers did not follow rules. Of course, reason is in most of cases intention to use as much RAM as possible in limited 512KB machines. Other reason is speed. Then we have Timer C problem with TOS 2.06. I know about 6 games which work not in TOS 2.06 (and Falcon) because of that, but there is for sure much more. It looks that in this case Atari is culprit. At least I did not see any mention about that stopping Timer C is not allowed when using system calls.
Actually, compatibility raises as we go to lower TOS versions, mostly because of RAM usage. But TOS 1.02 and especially TOS 1.00 are not for hard disk usage really. So, as best choice we have 1.04.
In other words: most of games checks nothing. They place code or data in low RAM because it was OK with TOS version what existed in that time, and with running from floppy. By higher TOS versions we have more low RAM allocated for system, + hard disk drivers allocate low RAM too, so conflict is inevitable.

This 'hybrid' TOS actually not solves low RAM problem, because low RAM usage is practically same as by TOS 2.06.
But it is just first step, result of disassembling. Next thing (on what I work currently) will let whole low RAM free for games - but will not work on 512KB machines, as we have to place GEMDOS's RAM workspace (25KB + drivers, usually 40-50KB), somewhere...

I've been curious for a while about whether the prices you publish
already have the 20% taken off?

Some new possibilities, considering compatibility and easy to use: thanks to disasm. and analysing of GEMDOS now I work on : launching games which working well only from AUTO folder (so need booting) - from Desktop. This is possible by quick set-up of little stripped GEMDOS 0.15 (from TOS 1.04) . And it offers much better compatibility than TOS 2.06. It can work under any TOS. Quick is because some unnecessary things are out - as floppy test, boot . So far I did Starglider 1 - it runs flawless under TOS 2.06, and starts very fast. And good thing is that it can be combined with GAMEX - there is enough free place in 512KB to place GEMDOS 0.15 with hard disk driver, buffers, + copy of working Desktop, TOS from which we launch.
So, we will have easy launch, high compatibility and possibility for statesaves. Only condition is 1MB RAM for most of games (which work with 512K normally), and of course some work in adapting games...

All games:
- README list supported game data files.
- Added -iwad /pat/to/gamefile.wad command line parameter.

Doom:
- Fixed bug when saving game, was corrupting memory
  (Thanks to Sascha Uhlig for report and testing).

The ports are built with SDL 1.2 (svn 20090526) which have the following
things changed, compared to SDL 1.2.13:

- Xbios video driver disabled when FVDI present.
- Teamtap autodetection on joypad ports
  (Thanks to Fredifredo for teamtap and joypads).
- Xbios audio driver enabled for Magic
  (Thanks to Sascha Uhlig for testing).

Ports are available on my website.

Hi,

Here is statistics about ARAnyM 0.9.8beta downloads, released 2009/04/25

Package                                   #               Architecture

aranym_0.9.8beta-1.etch_amd64.deb        24                      AMD64
aranym_0.9.8beta-1.etch_i386.deb         14                       i386
aranym-0.9.8beta-1.fc10.i386.rpm         60                       i386
aranym-0.9.8beta-cygwin.zip             228                       i386
aranym-0.9.8beta.dmg                    180     Mac Universal (PPC/x86)
aranym-0.9.8beta-ps3.zip                 26                      PPC64
aranym-0.9.8beta.tar.gz                 110       Platform-Independent

The download page is
<http://sf.net/project/showfiles.php?group_id=3D41106&package_id=3D33298>=

i.e. Linux (98), Windows (228), Macintosh (180), PlayStation 3 (26).

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

It's yours =3D)

It was a terminal emulation program by John Palevich (sp?) originally distributed through Atari's APX program.

I used Chameleon (tape version) many times to submit programming assignments to school (way back when). Using tape and the slow transfer rate (300 baud) was incredibly cumbersome but it beat driving to school at 2:00 AM (the only time the campus terminals seemed to be available).

And, wasn't 300baud just marvy ??

There was also a loadable desk accessory called Chameleon. It allowed
you to load and unload ACC's at will.

Mark

P>IF so, what was it for?

That used to be an accesory for SingleTOS that would allow you to load (and unload) other accessories at runtime.

I was in the same boat, used it most of my freshman year with my little
xm301 modem and 800xl. I at least had a disk drive though. :-)

I have a TT with a bad internal HD but altogether functional
otherwise.  I am looking for a Falcon or Falcon MB to replace the one
I unceremoniously fried in a repair attempt =).  Any takers?  Other
suggestions welcome.

There is nothing on the market with wifi and blackberry form factor
for $100. The closest could be the old Palm Tungsten C, but that was
$300 when it was available. Something with an older chipset, wifi, and a
```

320x240 screen should be available for $100. Look at the Nintendo DS.
It's $130, and it has everything except a keyboard.

Yes - I found it seful before I got MagiC. But you couldn't unload
the multi-accessory Harlekin with it! :-(

I've a Atari Falcon 030 for sale.

In really nice clean condition, comes with the following...

Stock Falcon with Tos 4.04, upgraded to 14megs with a Ram Gizzmo board.
Factory case, keyboard, mouse, manuals and disk software.
Has a working internal Seagate IDE hard drive, (60-80meg drive).
Motherboard has not had any major hardware upgrades.
Also comes with RGB and VGA monitor adapters and PS cable.
Ready to run and comes in a original Falcon Box.

Also included, Like new Printer and SCSI cables.
No dust or dirt on motherboard.
Needs to go to a good home, out of room here.
If you've been looking for a good one, this is it.
First $850.00 takes it, shipping and insurance included if in US/Canada.

Serious inquires only please!
E-mail if really interested, will give phone number if you need a verbal conversation to
complete the sale/purchase.

Other Falcon related Items...

4-meg Factory memory board-$45.00 shipping and insurance included.
Factory Falcon Power Supply like new-$60.00/used-$35.00. shipping and insurance included.

ST/e Items

Vidi ST cartridge like new in box with original disk software
and manuals.-$40.00 shipping and insurance included.

E-mail me at phantomm@bellsouth.net
.

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BenSells.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Hello,

I have a Stacy without its power unit. But I have an IBM one with those
characteristics:

OUTPUT 20 - 10 V =
2.00 - 3.37 A

Can it be used as a replacement?

Another question... This IBM AC adapter has 4 pins:
1) Ground
2) +
3) -
4) Input signal

What is the 4th for??

Guillaume.

Hey all,

I troll my local Craigslist twice daily for Atari stuff and wouldn't you know it an Atari 520ST with 1MB, 2 SF314's, 1 SC1224, and 1 set of VERY archaic (full height) scsi drives with what looks to be an adscsi was sold to me for $30. He said he had all kinds of responses but I was the first to actually show up or even make an appointment. It's really nice to get ahold of what is an exact copy of my first computer ever and at such an ebay (shipping, bleh) beating deal. This time I won't let go of it so easily ;) I've been doing this for a year and a half! It takes dedication.

--
Thanks,
Mark

I traded my TT for a Falcon last year, but this was a TT with an aixTT
fastram-card and a Crazy Dots graphics card. Traded it for a slightly
dodgy Falcon with a partially working BlowUp FX speeder.

I never used my TT anyway, so I don't regret trading it. The TT (with graphics card!) was superior in most aspects, but I like the Falcon better.

Its really hard not to like the Falcon, IMHO... I think I'd have to work at it all day. :)

I seriously doubt that it is real USB mouse driver, but PS2 driver.
USB and PS2 are practically HW compatible, considering used lines.
Maybe that Jan Thomas explain it, and perhaps publish source ?

Just keep dreaming further about that someone will make serious USB drivers for Atari ST. With current support and feedback hardly will someone start such big project.
Other thing is possible speed with current USB interfaces. USB is pretty demanding, so to have some good speed on slow Ataris USB IF should do most of job, and poor old Atari should handle only decoded raw data.

We received our 27,000th call this month and have over 30,000 messages
posted at the DarkForce! BBS during our multiple years of operation.

Are we a semi-permanent, quasi-mythical, sort of recognized institution
of the renowned Atari community yet? :)

I can get my hands on a real nice, BlowUp Hard II external (for monitor
port)
Falcon screen enhancer. With original disk and manual.
How much is the dog worth to you?

I appreciate the info, was there a picture of a chameleon on the disk label
or on the
cassette version if anyone remembers?

Was wondering if anyone still uses a ST/e or Falcon, PC hardware
emulator board.

And if anyone knows where I might find something like a message base
past or present that would have some info on which software worked or
works with the boards.

I'm looking for some good working keyboards
for the Mega ST, Mega STE and TT.

If you have one or more of these for sale/trade/give away,
contact me at phantomm@bellsouth.net

I have one in my little Falcon, a 286 board. Doesn't get used much any
more tho.

Only basic software that doesn't use colour VGA works on it iirc.

Mark

Hi Mark,

I've got one of those too.

If you don't mind me asking, Do you have a hard drive partition(s) for it, or do you just use the disk drive?

Also what hard drive driver are you using if you have a boot partition?

leed_public@hotmail.com wrote:
>That's AWESOME. The AdSCSI alone is worth a mint!

It's NOT an adscsi. It's an adaptec 4000 something or other. I never
knew such a thing existed? Maybe it's an MFM controller... I didn't look
at the drives yet but it would kind of make sense given that they are
like 10 and 20mb.
Either way, I'm totally stoked to have a little unmolested piece of
history. There's even docs on there from the mid to late 80's. The setup,
with quick ST and gdos and maxifile.. Priceless. It literally sat in
this dude's basement for the last 19 years.
Thanks,
Mark

I would assume that speed is not important if you're still using an ST
;-) Being able to read and write USB sticks would be great, even if it's
slow.

I use the SUPERCHARGER, a DMA board that runs on ST/STE/Mega/TT.
You can find informations, snapshots, on my WEB page:

http://pagesperso-orange.fr/gtello/supch_e.htm

Guillaume.

Its been so long I can't remember. I think I have it just floppy only
atm iirc. It wasn't easy, too ages to find the software and manual on
the net. I'll try and fire it up later and check for you.

Mark

 Well, in "... would be great" we all agree, for sure :-) . I agree
too that speed is not so important for people using old Ataris.
But... if we can already have good speed with similar storage media:
Compact Flash card then I don't see that forcing USB Pen drive support
is something of priority. CF is more expensive than Pen drive, but
IDE IF is simpler than USB one, plus we have already drivers for it.
Price difference of medias is not so big, and 2GB CF card (for
instance) can hold couple thousands of Atari ST programs. With cheap
card reader for PC or MAC we can have simple and fast data transfer,
writing DL-ed stuff with PC on card for later usage on Atari. Hmm...
I forgot though that IDE IF attaching to Ataris is not quite an
option, due to lack of expansion port... But for non-electronic people
there is SD and Satan too :-)

Yep, was just about to say, with SatanDisk and UltraSatan, I'm not as concerned about a USB option. But...it would be nice to have - more options is always a good thing. :)

Can't wait for the UltraSatan to get here - 2 cards, hot swappable, and you can set a card to be PC compatible (although you lose on size) to swap data back and forth. Been using the SatanDisk with my STacy and it works very well. Righteous STuff. :)

Hello,

Still in trouble : one of my 2 EtherNats suddenly stopped working a couple of weeks ago. First, it began to stop from time to time, but then it definetely stopped. The 2 leds are lit, but no way to find the route to hosts, nor ping, etc. - even inside my local network -.
After I spent many hours trying to understand what was wrong, and looking for supposed corrupted data on my disk, I finally replaced it with the one on my second CT60'ed Falcon - the one I use as a backup system -, and it worked.
So, I'm quite sure it's the board itself and not the software.
Maybe some component(s) being distressed ? But, then, I fear it will happen to my second board too.
Does someone knows a way to test an find what may be wrong ?
Again, keep in mind that every obvious software test, except the driver itself, has been done.

Regards,

J.-Luc

Ok, ok... my fault : I omitted to add it concerns EtherNat.
We (who bought those very expensive boards) own a board that was
very promising, with 1 ethernet (actually working, but only using
MiNT OS) and 2 USB-2 ports.
Those who were lucky enough to receive their board(s) (some people
might not get theirs before next christmas) had to migrate to MiNT
in order to be able to use the ethernet, and the USB ports still
don't allow to run anything else that mice - where we were promised
memory sticks and other devices -.
I know, I wrote this already, but... I think this is really quite
frustrating : we bought a device that doesn't work half the way it
was announced to. :-(

Folks, I know its an abbreviated month, but we're still gonna do a prize
give-a-way. Courtesly of Techie_alison, we'll be giving away one of her
updated PeST devices.

Whats a PeST? Its an interface that lets you use any PS2 mouse with
your Atari ST.

More details/pictures here:

http://pest.atari.org/

Thanks and remember, you can't win if you don't call. :)

I saw that those projects are abandoned, went in public-domain (published HW source files). Of course beause of small interest. It is always like this when no some 'critical mass'. About undelivered promises I really can not say something. Complain to people who promised.
But I talk already for long time about SW, driver problem. Still, see that people wants new HW, add-ons, interfaces. Then some new Atari clones are announced, for pretty high prices... Don't see any reason for optimism... Who will make drivers for those clones, still under (hard) development.
As biggest problem among Atari people I see lack of realism. We must be aware that we are very limited - in our count, in our real possibilities for new developments. That making good SW, drivers, OS improvements takes more time and effort than making HW. Do we now pay price of massive piracy in past ? How to stimulate programmers ?

PP

I see you are looking for keyboards. I have a Mega keyboard that I recrimped with an RJ45 plug. Good shape though. You can recrimp it with the standard 6 pin plug. Also, I have an extra TT keyboard. You and I are talking about both a Falcon and a BlowUp II on other channels. Maybe I can leverage the keyboards to wrangle some of what I want from you. =3D)

Hi Guillaume,

I have one of those well two of those also.
I think it was really headed in the right direction, but
as with all those pc hardware emulators, they only went so far.
.

I have a SCSI 50 pin Matsushita, Model No. LF-D101N.
Was thinking of using it on a Falcon or MegaSTE.

Does HD Driver support this model?

Does ExtenDos Gold/CD Writer support this model?

It should, since there is no restriction on the SCSI devices supported
by the SCSI driver included in current versions of HDDRIVER. Just run an
ID check and check the termination in case the device is not found.

Also ensure that SCSI initiator identification is enabled and that the
drive does not have the same SCSI ID as the Falcon.
As far as the MegaSTE is concerned a LINK96/97 is required for some SCSI
devices. Some devices require the computer to have an SCSI ID of its own
(which is mandated by the SCSI standard) in order to work properly.

Out of curiosity, how one can connect to this bbs?

```
 telnet darkforce-bbs.dyndns.org
Trying 173.80.208.248...
Connected to darkforce-bbs.dyndns.org.
Escape character is '^]'.
```

... and this remains for eternity. I tried it from both Windows
(putty) and Linux, different IPs, different clients.

Hi Miro! Sorry for any confusion - at that prompt, just hit the <return>

key a few times - for some odd reason, what the user sees shows up a bit differently on different OS's.

Thanks for calling! :)

I believe the Adaptec Controller is for MFM or RLL and you'll still need a SCSI Host Adapter to make it work! It's hard to find MFM or RLL Hard Drives!

=-Thanx-=

leed_public@hotmail.com wrote:

>That's AWESOME. The AdSCSI alone is worth a mint!

It's NOT an adscsi. It's an adaptec 4000 something or other. I never
knew such a thing existed? Maybe it's an MFM controller... I didn't look
at the drives yet but it would kind of make sense given that they are
like 10 and 20mb.
Either way, I'm totally stoked to have a little unmolested piece of
history. There's even docs on there from the mid to late 80's. The setup,
with quick ST and gdos and maxifile.. Priceless. It literally sat in
this dude's basement for the last 19 years.
Thanks,
Mark

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

The STacy expects an input between 10.6 and 18VDC. (The STacy has a 'power low' light that comes on around 11.5V. However, the STacy keeps running until somewhere around 10.5V).

I experimented with the STacy in 2001 and made several posts in 2002 regarding powering the STacy with batteries. Here's a brief summary:

Don't use "C" cells! Atari and I both tried it, and it doesn't work well (you get 15 minutes per charge). With some expensive high-amperage cells you can get 30 minutes, but internal packs just don't have enough juice!

However, a 12V cord to a 12V battery will work, but since the "power low" light comes on at 11.5V you will have the "power low" light on frequently. Also, you need to have a large enough battery to handle the drain. Expect to use 2 - 3 Ah (Amp-Hours) of capacity for each hour of use for large (auto-sized) batteries and 3 - 4 Ah of capacity for smaller batteries due to the voltage drop. The commonly available

"jumpstart" batteries typically hold 14 - 21 Ah and thus I'd suspect
that they'd work for several hours. (FWIW, I used a 40 pound 72 Ah
lead-acid wheelchair battery (13.8V) to power the STacy for several
years and managed over 24 hours a charge!)

Before I go, let me note that I'm going off of memory, although I'm
reasonably certain my numbers are accurate. Still, no warranties are
given or implied.

Galen

Hi Galen.

How much of a difference do you reckon it would make if the old stock LCD
was replaced with a newer one, (DC of course), with low wattage reqs, and
the internal hard drive was removed and replaced with something solid
state like the SatanDisk or upcoming UltraSatan.

I'm just wondering if the original battery pack might actually be feasible
then?

Thanks.

Great!

I have used the Compaq power unit (16V 2,5A) and it works great!!

Not too noisy, the display is a bit dark even with full brigthness, the trackball is better than the pads on the new laptops.

I have another question:

This Stacy has a 20Mb hard drive, and I have a 160Mb SCSI that I wanted to fit in...

The problem is that, even with all screws removed, I can't open the computer, something seems to maintain it around the Floppy+HD block.
It opens well around the keyboard, on the left side too, but not on the back right).

(I have removed the screws under the Stacy and the two on the back side). I don't want to break something!

And another other one:

The two ROM chips are really easy to reach, can you confirm that I could put a TOS 2.06 ??

Guillaume.

I agree with you, this Supercharger was really a good thing, nothing to open, just plug in the DMA port and run!
On my web page I also put some photos of the Supercharger 286 prototype that (as far as I know) has never been released to the public.

If you have a Supercharger to sell, I am interested... I could add, in this exchange, a FPU 8087 for your other Supercharger.

Guillaume.

The USB 2.0 chip I'd like to use is the NEC upd720101... (5 ports on PCI).
It is very well supported on linux and many PCI cards use it.

So, if somebody want to adapt linux driver on TOS, I'm ready to support him by connecting the NEC chip to his atari !

Regards

Very good question : how to stimulate programmers ?

Except some exceptions, many people are stimulted with money.

So, maybe selling hardware may open the way to feedback a % of the hard to the drivers authors ...

If tomorrow I sell an USB board for atari and assure a % of the price to an author of the driver, will this run ?

If somebody is ready to develop here the USB driver and get money from me, please contact me !

Regards

In a stunning reversal of fortune, I find myself needing to divest.
Add-Ons ARE NOT added on. They are separate and available as such.

Atari Falcon 030 14MB w/ power, aftermarket mouse (Amiga switchable),
RGB and VGA adapters
Atari 1040STe TOS 2.06/4MB w/ power, Atari Mouse
Atari TT030 w/ power, keyboard, aftermarket mouse
Atari TT030 w/ power, keyboard, Atari Mouse
Atari 130XE w/ power
Atari 1050 Disk Drive w/ power, SIO cable
Atari XF551 3.5" w/ power, SIO cable, and 5 1/4" mechanism and
original ROM
CT60 50mHz/128MB
Skunk Accelerator (the slower of the 2 models)
ICD AdSCSI ST
SIO2IDE
SIO2SD mounted inside XMM301 housing
12' S-Video cable for Atari 8-Bit
Atari RGB Video to SCART cable
NEC Multispin SCSI CDROM Drive (Top Loader) w/ power
NEC Multispin SCSI CDROM Drive (Caddy Loader) w/ power and caddy
DBA25 to 50Pin Centronix SCSI Cable x 3

50 Pin HD Male/Male SCSI II Cable

I will entertain offers from denizens of this forum for a week and
then post the items on eBay.

You really did a nice job with the web page. It looks like the daughter card
has memory. Is this added to the memory of the motherboard?

I have some old advertisements for a 486 version, but have no idea if it was
ever made or released.

Do you have the SuperCharger manual?
I have it if you need any info.

If I decide to get rid of one, I'll let you have first offer on it.

What versions of the software, utility disk do you have?

There is a version 1.5 utility disk which maybe labled 1.4 on the
disk label. afaik, this was last version???

btw, what did you use to get the black n white screen grabs of the software
that you have up on the web page?

The button for the disk drive could be catching on the case.
Those 2 screws on the back connect to a metal brace for the
floppy and hard drive.

iirc you also have to unplug 2 sets of wires located in the top part of the
monitor case and also unscrew a large green wire. If you want to take
the whole case off. The monitor screen will remain with the top case.
There is also a metal sheilding to remove to get to the MB.

Be careful when removing the keyboard. It has a plastic ribbon connection
with contacts. The keyboard just sits in there with this connection.

Pry open the monitor screen at the top edges and look inside and you'll see
the connectors.

Hello,

I have open (at last!) my STACY and wanted to change the HD.
I have a SCSI 160MB that runs well on the TT.
I put it into the STACY and get a strange problem :

when powered on, it signals a short-circuit! (is it the right word? I
mean that electricity is connected from + to -) and the alimentation
makes a caracteristical noise.
If I just unplug the power cord of the new HD, it's ok.

But this HD worked few minutes before!!!

On the main board I can read +5V, gnd, gnd, +12V and the four wires are
correctly directed to the same pins on the hard drive...

HELP !!!

Guillaume.

I was think it proably would. The bigger question is whether or not
Extendos will support it. You might want to check out the Anodyne
website and ask Roger about it. Sounds like it would though.

Version 4.01 of TeraDesk open-source desktop for the 16-bit and 32-bit lines of Atari computers is available at:

http://solair.eunet.rs/~vdjole/teradesk.htm

Please note the new location; domain name has been changed because of recent political changes :(

The old URL should probably still be available for a while as:

http://solair.eunet.yu/~vdjole/teradesk.htm

This release fixes some problems that were detected when copying files to network file systems ('access denied' error was encountered when trying to set destination file attributes and user rights). This seems to work correctly in most cases now except with some (not all) nfs when user-id-mapping is set. See the history file for details.

Also, an improvement has been made in the shutdown procedure. Probably because of ambiguous documentation, different AESes use different parameters (wiscr vs. wisgr) in shel_write() to activate shutdown! TeraDesk now tries better to account for these differences by setting all of the alternative parameters. Btw. it seems that this issue is very poorly documented and that none of the AESes implements the shutdown procedure completely and as it probably was designed to be (e.g. what about 'shutdown completed' message?)

Have fun.

Djordje

Heh. What about that - wonder if they researched the name first.

Just ain't the same, somehow... :)

Not enough atari people to use several forums !

All people in the same forum is really better...for communication.

Will do,

Also, if anyone wants or needs a video put into Color  .FLC or .FLH format.
Just let me know.

I see only 1 Atari ST (to be accurater) really active forum (on English lang. and don't think that there is some more activer on some other lang). Atariage, ST/TT section is not much active, and is on pretty poor level considering posts and moderating.

Unfortunately, http://atari-forum.com/ is controlled by crew Atarilegend. In practice it means that they can do whatever want, and some ordinary member who wants to point on some their mistakes will be declared as troll, upsetter and similar.

There are some really absurd things: unlisted moderators, moderators who visit forum once in 2 years. Moderators who can not write decent post, who insult people etc.

But what is my real problem there is lack of support for people doing something useful, constructive. Really poor communication level, in forum and in PMs. What I see there are irreal wishes, dreamings about some new games, HW, interfaces etc. But who will do it ? And most hard part: who will write drivers for those things ? People talking about USB on ST, but forgets about NET-UsBEE, made some 2 yers ago, still without any USB driver (mouse driver for is not USB, but PS2). Beside that writing drivers is not easy, and requires time, money (you need real HW to test them). But with current level of support and feedback, it is totally understable.

Someone asked how I think solving problems on my forum. Well - it is not so big deal, I think. Considering current group members and their supporters: they are welcome with every constructive and objective posting. Writing their own opinion. If someone will say something like: "program AB is bad, I read it at D-Bug.site..." it will be considered as spam, useless, will be noticed etc...

How to motivate people about giving better support for authors ? At moment I have this idea: just not hiding from problem by not talking about it (I even posted one topic about it on Atari-forum, but Techie Alison immediately asked to delete it, because it will 'make troubles'...). So, why not write that community is not in best shape, that we can do some things better. Pointing to people that getting goodies means some work, making effort. Effort from both side - users and authors. Nothing is free in real World. Every human action is result of some motivation. If it is not money, maybe some nice words, getting some feedback, or at least seeing that anyone tried, used it at all.

So, I want in first people doing some new stuff, improving existing ones to come on my forum. People who wants to contribute something,

even if has no electronic, HW and SW knowledge. Everyone with some question about Atari HW, SW...
As I decided to abandon Atari-forum, everyone who want to ask me something can get answers on new place.
And I doubt that there will be someone who can giving answers about some specific areas as IDE hard disks, drivers, TOS/DOS compatibility and other things. Many people with knowledge already left forum, scene.

Will new forum last or not - I'm aware that there will be not much people,. posting. But I care more for some quality, seeking truth and new, realistic solutions than mass of posts.

Petari

There is one french newsgroup fr.comp.sys.atari, but it looks like it suffers from the same problems as the others:
- most posts are not directly linked to Atari
- a signifiant part of them are insulting, or realy bad jokes...
- when you try to talk about Atari... sometimes you dont't get any answer, or something like that:

"why do you still use your STE? you should get a Falcon for your problem"
Or if you have a Falcon: "you can't use your machine for that, jump to

Aranym"
Or if you have Aranym "Your not a real Atarian, I use my TT!"
etc
etc

But still some posts are interesting, and a source of informations for
me. But, yes.. we're ot a community anymore, nor a family, nor working
together to share our passion.

We have a more general forum "ordinosaures" that could be translated as
"computosaurs" for retro computing. Talks about C64, Amstrad, Apple II
etc.. and Atari of course!

Guillaume.

Hi,

There's a 0.9.8beta release of ARAnyM <http://aranym.org/>,
so the *miniPack* <http://eureka.atari.org/miniPack.zip> was
updated. It supports

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =3D)

Hi,

Interesting topic,

I for one, do not understand the need for a Web based Forem for Atari
Computers.
Not that I have anything against them.
What is the real problem for people using the Atari newsgroups for
communication?

Back years ago, we allowed about 4-5 lines for one's sig and off topic
remarks in here.
Back in the late 90s, this was the place were I found useful info and help
for software,
and hardware. Why has this changed?

The last thing that I want is to have to use a PC to find useful info, when
I can use a
STe or Falcon to grab postings off a newsgroup. But you can't do that if
there are none
to grab.

I go to the web based sites like AtariForum and AtariAge, simply because there are so many people there, and so much information posted. Both are great resources.

However, I agree with you Barry, because the newsgroups are accessible by just about any Atari user, even if they don't have Windows, Linux, a Mac or whatever. I'd like to see the Newsgroups be a priority for information *first*, then the other resources.

Just my 2 cents worth. (of course, this is coming from a guy who still
thinks BBSs are a great way to communicate)... :D

In my opinion, alot of this has to do with "business".
Just about everyone is trying to make a buck off of everything now.
The want for Atari related products is still there, or Falcons would be
going
for $50.00 or less.
I can pick up just about any kind of PC or Mac for $200 or so.

If your business is Atari related, it doesn't help for someone to dump tons
of Atari Software on the Net for Free download.
This attitude has killed what was left of Atari Software developers.
Yep, I can do things on the PC/Mac that I can't on the Atari, unless I code
or
make it.
Same goes for the Atari, there are things that I cannot do on the PC/Mac
without
hiring a programmer and hardware developer.

It's sort of like Stamp Collecting, Everyone wants the really rare ones.
And some what to make a quick buck, by passing off forged copies.

You can emulate, but there's nothing like the real thing, and that applies
to just about anything.

If the Atari platform is so bad and worthless, then why do I see stuff
running on
PC's and Mac's that's been done years ago on Ataris.

Then there's the "Control" thing. Some think they must control ever thing
written or
done on the Atari platform. (Do it our way or well get ya).   I've seen too
much of it.
It's smells of a old PC war of long ago.
It's a shame that some, really have gone to the dark side, and don't care
who gets
crushed in between.

BBSs are the way to go for some who do not wish to conform to the "New Way".

I'll continue doing my thing, because I enjoy it. Not cause someone wants me
to.

Yep, pictures/files are a big plus for sure. I agree they are certainly
much more active.

If I can do it on my Atari,I'd rather do it there first. (not doing usenet with one right now because my Mega ST is running the BBS, and I'm still getting my EtherNat sorted out on my Falcon.) That's just me and personal preference. I'm not slamming anyone who does it any other way, its all about personal choice and I certainly respect that. I'm just happy as a lark to see as many people still supporting/using Atari as we have! :)

> As for the new forum, its my understanding if I read between the line, he

Ah, did not know that part of the story... Well, I hope we don't lose him from the Atari community altogether - he writes some good software. His is the only updated version of Ultima 3 that I actually got to work from a hard drive on my STacy.

 No, "he" is not banned. And you have very bad attitude :-)
 "He" is maybe close to banning, because can not shut-up.
  So, I just want forum where I can say my opinion, without
 possible problems, 'football-hooligan' like jumps-in of primitive
people, where no group with privileges, and where people
understands what is constructive critic, and what is trolling.

I want forum where will be more attention on my posts.
On Atari forum my posts are just lost in sea of many postings.
On new forum all my posts will be very good noticeable - as
there will be nothing else :-)))

  Cheers, Pera

>

Well, you do not read it carefully. You show not good attitude :-)
Actually, I'm close to be banned, from reasons partially described.
I just want forum where I can write my own thoughts, experiences etc.
And this is what I can not on Atari forum. Because great Atarilegend
people gets 'upset' when i write some facts about their mistakes.
This is whole story about my 'banning'.
And banning means nothing - who insists my sign-in
with another username, mail address. Simple...

New forum will be much better connected with my site, SW and
HW projects. On big Atari forum my posts are just lost
in sea of other posts. On new forum they will be visible
very well, as there will be nothing other ! :-)))

About newgroup vs. forum : I think that modern forums are
much more advanced and faster way for communication
between people of same interest. Plus there is more freedom,
oprtunity to create rules, look etc.

Everyone can access forums somehow - if has no own computer
capable, or WEB connection always can visit some place where
it is present.

Look buddy, I don't know you at all. But you are very easy on accusing people.
I'm not at moment banned at Atari forum. It was for exactly one week - just admin in that post was not sure then, or did not care. But that ban was total nonsense, as I did not break any rules. I just pissed of some smartheads. And it was not surprising, and for some time I just don't care about all it...
That about multiple accounts is bullshit, placed by D-Bug who always when someone complains about them, their patches coming out with story that it is me with some new account.
Little sense for humor maybe ?
To repeat: Atari scene is spoiled by crews, groups which behave as they do, know things best. They do not listen to constructive critic. Some of them place lies around. Only blind people sees not how nonsense is this: " ... as it is known to wipe out whole Windows partitions without any sort of recovery!!!" Self referencing - it is 'known' only among D.Bug. Wiping whole partitions is something what takes time, Windows is protected against... etc.... Their comments are 'really useful' ....
I just walk my way.

You buffoon! You've been caught red handed multiple times trying to post on the d-bug forum AND atari age! I even swapped IPs with AA and we got a perfect match that it IS you!

So please, either shut up, or dare me to prove my point. I dare you publically.

> =A0 To repeat: Atari scene is spoiled by crews, groups which behave as

Yeah, especially since they happen. I used your program. I used it with some success. Then at one point, I tried to access one disk. Then everything locked up. Then I rebooted. Then no system was to be found. Way to go!

Also, a friend's zip disk was totally wiped by running one of your "adaptations". We pointed that out several times, but you turned a deaf ear at that.

> =A0 =A0I just walk my way.

Yeah, and I hope you like walking alone...

```

After some careful thought and some trial and error, I have come up with a design for a Video Adapter for the Atari ST/TT systems that will provide S-Video and Composite Video for all Atari ST/TT systems that use the DIN 13 pin Video Port.

This Unit Will Work Even if your ST/TT Does not Have an RF Modulator Built in.

This Adapter not only provides a Beautiful S-video Signal and a Decent Composite Signal, but will only cost about $60 USD as a complete unit. (not just a board with components)

It also fixes the problem with over Drivin signals coming from the RGB lines. So the Picture you get will be Bright and Crisp with no blurred Colors or that Grainy look.

As an Atari ST User Of many years I have always taken note of the fact that not only is it expensive to buy a refurbished monitor (shipping etc.) but It is also very inconvenient to have an extra monitor set up in the house. This unit works in NTSC only (I'm Still working on a PAL version). The S-Video is so Good on this that I can't hardly tell the difference between the adapter and an Original SC1224 RGB monitor.

I don't know how soon that I will have them available but I hoping to
have them ready to ship to Video61 no later than Mid May.

there's a mock up of what the Unit will look like completed on atari

Anyone know how to get in touch with any of the Smurf authors
since it went GPL?

I am currently translating the remaining German in the PRG, HLP
and module files etc. of V1.06, and want to send it to them for
distribution - or if not them, where?

I want to find out where the PATHS.STR file belongs, since I can't
get Smurf to recognize it!

I also purchased the previous 1.05 version, which has an
ILIST.DAT file in it. What does this do, and where does it belong?

Any help welcome!

Regards, /Peter/

You and me both Martin. I am on the list eventhough I will be upgrading my
Falcon with the CT63 and the CTPCI. Never hurts to have a backup system.

Sounds real good. It should sell. I will check it out.

Has anyone gave any thought to how we can protect our,
intellectual property when we post to this group or other
forems?

Most of us have came up with new ideas, projects and new
ways to do things, and posted them here in the past for others
to use. Most of us have creativity and want to share it with others
who use a Atari Computer or emulator.

But I don't want some company making a fortune off my ideas, unless
I get my part of the fortune. Working to make someone else rich
while getting nothing in return is not the correct way to do things.

You might want to check out the following before posting that next
idea, invention or etc.

http://bits.blogs.nytimes.com/2009/03/30/trolling-for-patents-to-fight-patent-trolls/

I've just recently started looking at how big this problem can be.
I'd like to here from anyone who has more knowledge on this and
how we can best protect what we post.

As I could expect, nothing new to read here. Just same, old
bullshit. So, I will say last time: I don't have IP. It is changeable.
Plus, I came on D-Bug forum somewhere around New Year to calm things

down and try some normal relationship. At very start CJ acted antagonistic. After about 1 week, some locked threads, they banned me without any explanation and ground. Except if we not count that I fixed bad 'release' of Helter Skelter, hard disk 'adapted' by ggn, who obviously had better things to do instead testing it for 10 minutes... And that I asked explanation about his brutal posting, considering my post about that gamefix (titled 'trolling'). Ahh.... all it is actually totally ridiculous.

Just to reply on one concrete thing: "Also, a friend's zip disk was totally wiped by running one of your
"adaptations". We pointed that out several times, but you turned a deaf ear at that. " .

This is another example of seeking something bad from me, at all costs. That Zip data loose (not 'total wiping' - again same overstate) was solved.
Problem was likely intro what I did not remove from game Bomb Jack. Because crack was protected, maybe better than original game. At least after removing it 'wiping' not happened again. Of course, all it could be because from something totally different . But best solution is to blame me....
Lies, lies, as always - you never pointed anything concrete, I was informed about problem by owner of that zip, and solved things after couple PMs. And he said me in beginning that I'm 'known' as someone who ignores users complains, observations. Of course, we can guess about who placed that.... Stalin, McCarthy would be proud on you, ggn. Of course that I'm now 'deaf' - most what ggn says about me is total crap.

Soon I will publish new game storing/restoring system. And certainly some people will find that it is something bad, stupid, stolen or similar. Please, don't surprise me :-)

Of course, this post will change nothing in mind of people. Most of people just don't care for facts, thruth, some better communication. They just follow some "respected" ones, use 'best' SW, etc. We are on level of football fans, nothing better. Feeling better, smarter when in some group against solo person. I call it just cowardness. Lack of own opinions, views.
I'm not Atari-lover. It is just another firm for me, with good and bad sides. It just happened that I bought Atari ST in 1987, because it fitted best my needs. Likely, half year later I would buy Amiga 500, but at that moment it was poor with SW.
Some 4 years later situation with SW was much better for Amiga, just to remind.
So, I do what always did with computers: doing some new SW, HW add-ons, what I see that can be done relatively simple, cheap, and exists not.
So was with IDE hard disk IF in 1992. So was with Floppy Imager for Windows XP. I made it because it was need for.
So I do now some new stuff. But some people must be asshole and writing complete nonsenses, lies about. Nobody forces you to use

anything of my stuff. If you have some normal observation, comment, bug-report, then please write me.

Forums, E-mails are for such things. Instead those, normal ways some smartheads do spitting on their sites, forums reserved only for likers and lickers (:-)) and then find to say that I do not react well on their pointings. I reacted total normally - I said that it is bullshit. D-bug just pointed nothing useful, true. Most of theit 'pontings' contains nonsenses, lies, what is actually easy to check. But who cares for facts. It's always easier to have someone for 'usual suspect'.

Y'know, there was a time when I was as Atari-geek as the best. I really
find it hard to believe that anyone is going to miss out on a fortune by
having Atari ideas stolen in todays world, though.

Ed

```

its obvious that a person should be rewarded for there good ideal,
whats difficult is the fact which faces us that if something is good
then everybody likes then wants it,,,but has to be proven before the
wheels go in motion,, where as opposite bad i deals get frowned upon
and disregarded....

my only input might be , have your ideal done or at least done in
rough , and only expose the thought of the ideal , not the real full
program ,,,,

especially if on your atari , i can't see it being that
revolutionary , but who knows... you know ,

why build a trampoline for people with no legs!

so don't be worried
cause your not the one going to do all the hard work ,its just your
ideal
until you commisin on a team to debug,write,develop and launch
this ideal..   its only hypothetical "dust in the wind" as said

i have ideals too but its child like to just sit here and believe with
the five years programming experience i have that my program is going
to make me wealthy

it just is a positive step towards the contribution to the atari
computer wrealm

exposure another good point , i 'll stop now.. blab blab blah...

Well, currently I'm tied to my room because of injury.

As I said, nothing will change in people's mind. Believe what you want. Hate me if you like to hate.

To GFA-Basicer: Independent 3rd parties, admins: as CJ... . Or some Sauron on Atariage who recieved tons of PMs from ggn, CJ with complains against me. I asked him to remove me from Atariage, and I'm over with their 'independent moderating'... Or Atarilegend people at Atari-forum...
You really know the things.... blah :-) Actually you proving my reasons. Locked down threads are reason for starting own forum, where people can say what want without that some stupid prejudiced '3rd parti' deletes it because is afraid from some hated discussion (discussion, not football-hooligan like posts). Or because someone dares to say that some moderator, crew member is ignorant.

Hello,

just a short reminder: in case you are still interested (we all know how frustrating was that Paypal story), you should start thinking about sending the money -- the deadline is end of this month (May the 31st).

All payment options and information is available at http://ultrasatan.atari.org (either on main page or after you log in and select appropriate number of devices plus your country).

If you know anybody in your neighborhood who could be possibly interested in this device, please point him to mentioned website. Even now I'm receiving mails about how people got the knowledge about it just a few days ago (no kidding!)

P.S. Many people have sent their money via Money Bookers / Western Union / bank transfer / cash in letter and I've got *every* payment so there's nothing to worry about (except some lack of comfort). If you have any questions, feel free to contact me.

I present system, what I named GAMEX (gaming extra, games exitable) for Atari ST and compatibles, which allows some partially seen, some new things: recording gamestates (snapshots) on disks and playing later them. New is option to play state stored in RAM and launching gamestate files with common utility (no need for specific game starter). So, user can after couple mouse clicks find himself at certain position in game. In case of games not using TOS calls it will work even with different TOS version than used by state saving.

This will work with min 1MB RAM for most of games - those which normally run on 512KB machines. So far, I adapted 3 games: Sideways, Flight Simulator II and Virus. Will do some nice games, where gamestate save has sense or works not with hard disks in near future.
And as it goes in this waters, already some idiotic comments appeared, but honestly, I would be surprised if it did not happen.
More explanations, DL, videos here: http://ppera.07x.net/atari/fromhd.php?s=d
Some technical details here: http://ppera.07x.net/forum/viewtopic.php?f=6&t=7&p=7#p7

I know, I know, it's boring, annoying, useless etc...

However, according to law, every person has right to public reply on writings against him, and expose his arguments.   (spare me with 'ignore' advices - not my case.)
As other side do not allow me to reply there, I must post here.

"Rest assured I'm not going to let one narrow-minded, hypocritical, bickering, Hungarian Troll remove me from the Atari world no matter how many of my ideas or lines of my code he tries to take credit for. The folks in Atari-land who have been here long enough to matter know the truth, the misguided newcomers can enjoy having their partitions wiped clean."

Well, this is pretty schowinistic pointing on someones nation, what is btw. even not correct. My fater was not Hungarian, and it counts. So, dear CJ, nobody wants to remove you from Atari World. Everyone should have chance to do what likes here. Some competition is even good, as is known. You exagger everything. I did not say that ULS is bad. It is just not good for everything. Forcing ULS at all cost as in case of Sideways is by me pretty bad solution.

Then, you need to write some good arguments about that stealing ideas and code. What posted there (code snippet) just proved your shallowness and lazyness to even check simple things before write. (Please visit their forum, read Entering Hiatus thead and will see what I talk).. So, you actually made full from yourself, and stopped with talk about Gamex, but started old 'good' tactic - counterattack. With usual bullshits, lies, absurd nonsenses.

It is sad to see how many people (10 is many for me in this case) believes all that crap inspired only by your sick mind and inability to admit that someone other can know something.
And even lazy to get with something new, so pulled out old 'wiped' blah-blah.

Stealing ideas ? About making snapshots ? Known for decades. Storing/ restoring MFP ? How to hell preserve machine state without that ? Next what I will read is that I use same user interface as in CJ's creations - keyboard, so I took his 'idea' .

Please, go and heal yourself. You are welcome to come back with changed mind.
Maybe we will even talk like humans.

Get off the internet already you damn drama queen. First you've been banned on the d-bug forum, then atari age, then atari forum. And it's all because of you.

You don't like D-Bug views, you don't read them. Instead you go whine on every source available.

The good people of usenet don't ban people. Instead, they killfile people. So in essence pretty soon you'll be talking to yourself here.

Try not to get banned from your own forum too....

Hahahha.... Thank you, I'll do my best, I promise !

Now, the less funny part: I was not banned from any normal forum (D-Bug is certainly not such).
Moron Mug UK just did useful thing (as always) : banned member who left the forum (in same thread with goodbye) :-)

It is not about do I like D-Bug or not. It is about human behaviour. About placing lies. About poisoning this area.
You jast behave like you have all right to do some things. When someone does something better in same area, you start with brutal attacks - as happened in Helter Skelter case (saying that I stealed your 10 byte long PSG patch).
Now, only few hours after putting post about new Gamex you had fun with writing complete bullshits without any checkings, and made fulls from ourselves. And finally, CJ comes with moaning about that I want to push him out, that I steal his code and similar. This are serious charges, even from someone who says that likes to talk shits.
So, to repeat, all what I want is that you start to act as civilised humans. Stop writing bullshits and lies. Allow people to do what they like to do. Point is not in beeing the best, but doing best what we can.
You know well that snapshotting is known for decades. How saving machinestate goes. You discovered nothing new, and even if would, it is not something what anyone would patent. In fact, all it is just quick idea, what may be developed with less-more effort in working form.
I just had such quick idea one morning, after couple days of experimenting with fast RAM paging. Then I realised that I can do something more useful than swapping 2 TOS versions. Other predisposition for this project was solving of permanent high RAM allocation (disabling from TOS even after PRG exit), what I finally did about 1 month ago.
Now I add some new ideas as option for note, HW, TOS version of machine where it is done storing in snapshots. All for user's benefit.

PP

Ben,

Someone correct me if I'm wrong (it's been a long time). Apex (Media?) is an art/animation package that is capable of full "TrueColor" (16-bit) color, and can make use of Nemesis to reach a 640x480 on-screen TrueColor mode. It was pretty nice. I only used it once or twice, though.

Also, and this is a totally picky thing (I'm a writer), so don't take offense at this: it's regardless, not irregardless. Sorry, but that's one of my pet peeves. I'm just picky that way.

Hope that (at least one of these, anyway) helps!

is this ppera

are you doing all the talking and nobody is listening ??,,

i like ppera , he;s from the other forum i belong to..

ppera knows a bit about coding ,and i don't think he is a drama
queen ,

maybe he has good points ,
everyone lets hear/see this through and find out exactually
what intentions are, and where this is going..

what is ': oh no not again" ?

charles

Ideas are a dime a dozen. Everyone has them, but the successful people
put in the hard work to execute them.

My million dollar idea would be a handheld ST or Atari 8-bit in the size
of a Game Boy but with a keyboard like a blackberry. Add wireless and
sell it for $100. There's an idea for someone to make a lot of money
with. :-)

GP32, Chatboard and CaSTaway would come close to this, although the
chatboard isn't the most wieldy of accessories. I believe there's
some USB wireless type project with the GP32 as well, totally not
up to speed on it all though, and I doubt CaSTaway will understand it.
What would you expect to use the wireless for?

Wireless for email and some Internet. Run a stripped down browser like
Opera Mini, where the heavy lifting is done server side. SSH would be

nice but I think would require too much CPU.

Hi,

Here is statistics about ARAnyM 0.9.8beta downloads, released 2009/04/25

Package	#	Architecture
aranym_0.9.8beta-1.etch_amd64.deb	13	AMD64
aranym_0.9.8beta-1.etch_i386.deb	9	i386
aranym-0.9.8beta-1.fc10.i386.rpm	56	i386
aranym-0.9.8beta-cygwin.zip	183	i386
aranym-0.9.8beta.dmg	116	Mac Universal (PPC/x86)
aranym-0.9.8beta-ps3.zip	22	PPC64
aranym-0.9.8beta.tar.gz	95	Platform-Independent

The download page is
<http://sf.net/project/showfiles.php?group_id=3D41106&package_id=3D33298>=

i.e. Linux (78), Windows (183), Macintosh (116), PlayStation 3 (22).

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

ATARIstically yours =3D)

Hi,

The following WEB sites are missing

<http://www.voja.de/easygem/> Die EasyGEM-Website
<http://www.users.zetnet.co.uk/atari_shack/download.htm> Sharewares
<http://www.seimet.de/hddriver_francais.html> HD-Driver
<http://www.seimet.de/atari_francais.html> Logiciels
<http://john.diot.free.fr/atari/> JOHNX / Atari (camera)
<http://www.users.zetnet.co.uk/atari_shack/start.htm> Matt's Atari Shack

May we have news from their maintainers ?

Best regards,

I started recently project which will likely take some time...
Disassembling TOS 1.04 and then doing some combinations and
modifications.

Disasm. of GEMDOS part is done. And I have already something useful:
'TOS 1.08', what is hybrid of TOS 1.04 and 2.06. It offers some
benefits ....

IMHO you should not call it TOS - it is not TOS and such a name will

```
confuse things soon.

  Not TOS ?  OK - maybe to call it Windows 92 ? ... but Bill Gates
will not like it. They forced Windows Commander to be renamed to
TOStal Commander   ;-)

ATARI produced TOS. Patches to TOS were called e.g. KAOS. You're
inserting version names of TOS and breaking up the order:
        - TOS 1.04 by Atari
        - TOS 1.06 by Atari
        - TOS 1.08 by you, but based on 1.04

That's confusing. Really.

I think he meant not "TOS x.yy", which are the way the official
(historical) TOS are named.
PPTOS, NewTOS, WonderfulTOS or whatever would avoid confusion.

The name "TOS" isn't yours to begin with. Call it ppTOS or whatever to
avoid confusion.

Too bad that everyone talks about the name and not about the quality of his work.

Sure that a TOS without bugs and with some improvements would be cool for our machines.
He can call it VISTA if he wants as long as his work is useful!

BTW, do you know my "little" work "COLORSTE" that brings color icons and color widows elements in ST Low?

This could be added...

Guillaume.

I think that you guys take all this too seriously. It is little too
late for that. Only few people will use this 'creation'.

I did not change a single byte in TOS 1.04's GEMDOS part, and did not
change anything in GEM (AES, Desktop) part of TOS 2.06. I just
combined them. In theory it could be done in half hours, but because
of address conflicts I needed first to disassemble GEMDOS part of
1.04 together with keyboard tables and system fonts (located after
AES).
So, it is TOS. 100% TOS. It is just not official TOS. That's missing
from your comments G=F6tz.
Nothing is patched (yet).

For me it would be easy to call it PP, Putnik or whatever, for Atari
hacked OS.
But I have in mind SW for detecting TOS version. I could leave there
1.04 . But when someone will see desktop of 2.06 will be really
confused. So, I decided to put there something not present, something
between 2 numbers.
TOS version numbering should be for both GEMDOS and GEM, as I know.
There are separated version numbers for AES and GEMDOS.
This is why I bracketed it here, why I put smiley in thread in forum.
Just a compromiswise solution.
If someone has idea how to achieve that SYSINFO will outprint my name
(instead 'TOS') when detects running OS, let me know :-)

  Yes. And you just confirm with second paragraph what wrote in
first :-)
 Such thing actually exists. Maybe price is higher, I don't know what
exactly we have on market currently.

  Surely nobody will produce machine with some 68000, 8 MHz CPU and
few MBs of RAM this days.
 But we have some handhelds capable to emulate ST (and many more).
  And now we are back again by SW problem:
 I have what you described for couple years:  PDA. With bluetooth.
Only without keyboard, but such things exist for PDAs.  We have CaST
CE emulator running on Windows CE.  And this is weakest part of whole
combination. It is slow (on 400MHz ARM), it crashes, freezes often. UI
is not solved well, etc.

So, please do SW. Ideas we have enough  :-)

Hello Pera,

I think this debate is kind of storm in a tea-cup... :-(
You could name it whatever you want, letting it be detected as
actual TOS.
You didn't patch anything so far, but had to do some work in order
to mix the 2 versions.
So, yes, it's still detected as TOS by other apps, but no, it can
be considered as non official TOS.
Name it whatever-you-want-TOS and go on with this great piece of
work, so everyone is happy. :-)

Regards,

J.-Luc

  Hi Gui  :-)

I think that I saw it earlier.  But now can not find it with Google.
Although I did not plan to bother with GUI (Desktop) part of TOS, it
may be good addition.So, please some link where can obtain it...

Hello,

You can find it on my download page, look for COLORSTE:

http://pagesperso-orange.fr/gtello/downld_e.htm

Program and sources.

Guillaume.

  Thanx.  I looked little in AES, Desktop structures. There is no
support for multicolor icons in TOS 2.06 (AES 3.20) and earlier. So,
to adding your solution we would need to disasm AES, dig in it, etc...
pretty hard task. I think that best if COLORSTE will stay as
installable APP. Maybe to do support for some other TOS versions.
 I did some simple changes in Desktop.rsc of TOS 2.06 .

     I missed the thing that you had a 2.06 for the AES.
     So COLORSTE is not the good one...

     I wrote COLOR _MSTE, it brings color icons and, if you have a graphic
card, 3D effects on the windows elements.

     But again, I think you're right to let it as a external patch.

     Guillaume.

It just confuses those, who doesn't know that there were no official
TOS 1.08.
Btw. I've just checked the so-called KaosTOS. In the about window it
says: "TOS30". The patched TOS 2.06 (SuperTOS) reports itself
completely the same as if it were Tos2.06. So I don't think there is a
standard here. And the way you name the image file of the TOS or the
link in the browser (Supertos fe. refers to" TOS2.06x.img"),  is
completely marginal question.

I have looked everywere for NVDI 5 and connot find any one that sells
it any more.
This includes ASH, European Shareware, Sytem Solutions and they dont
have it anymore.
I have E-mailed the Authors of NVDI 5 from their homepage and the
links are dead. I have called the 3 major atari dealer still left in
the USA, B&C, Best and Video 61, they dont have it. I have spoken to

via E-mail, all the European Atari Vendors that I can find on the web
and they dont have it. See this is what I get for putting all my Atari
computers in the closet for 10 plus years. I have NVDI 4 and just need
the upgrade to 5.

Does any body know where to get it or can anybody help me?

Got my first Atari in in 1979, 800 with a 410 tape drive,Zaxxon on
tape and a star raiders cartridge, I was hooked.

Got my Last Atari in 1992 I think, Falcon 030, and gota CT63 on order
from Mr. Czuba.

Please anybody with info?????

Rob

Seriously, please, if you are a programmer and you're going to give up on development, just open source the darned thing so that our poor old machines can die of old age rather than the sudden disappearance of it's lifeblood, software. You're obviously not going to make any more money by discontinuing a program, so please pass along the benefits of your time hard spent to others in the form of open source software.

I remember not too many years ago people arguing that free open source software would kill off our platform. But look what's happening now: Magic is gone while Mint still exists. NVDI is gone while fVDI still exists. Jinnee and Thing are all but gone while Teradesk continues. TOS is gone while EmuTOS lives on. Open source brings just a little extra life to dying platforms. So release your software so it can live on a little longer rather than die the pathetic death of deletion, disk decay, or a trash can.

Hello,

I'm trying to adapt M_Player to Aranym. I can yet view some videos.
The problem comes from the DMA sound emulation, on long videos the sound
and images are not synchro. So I would like to know if the difference is
always the same... Because I did it in the past to adapt the synchro to
the Falcon or TT: both machines use approximations of the DMA STE
frequencies.

So i ran DMASOUND, a tool of mine, that tells you the actual dma sound
frequencies and I got:

STE	Aranym (PC)
12517	12210
25033	24424
50066	48893

Can some of you do the same for me?

The DMASOUND tool is on the first line of this table:

http://pagesperso-orange.fr/gtello/downld_e.htm#prog

Then you just have to run DMASOUND.PRG and clic on the three TEST and
give me back the results (can you precise if you are running Aranym on a
Mac, a PC...) (you may hear some strange noises during the tests, it's
normal, the program uses the RAM as sound buffer and the RAM is not
always equal to zero!).

Thanks to all by advance...

Guillaume.

Hi all,

Just thought I would pass this along.

Medusa Computers is working on a Atari Coldfire, and taking some pre-orders! Here's the link to:

http://www.medusacomputer.com/coldari.html

My apologies if this has already been posted here.

Thanks!

I own Calamus. which might have helped. But, if you find the Calamus web page, you will see a copy of NVDI 5, on CD, available for sale, for a reasonable price plus reasonable shipping. Try there first, and if that doesn't work, try here again.

Hi Rob!

U>I have looked everywere for NVDI 5 and connot find any one that sells
U>it any more. This includes ASH,

Strange. On their homepage, it's still avaialble:

http://www.ashshop.de/ashshop/

from there, activate the link "Atari" in the top left box named "Kategorien".

Then click again on "Atari", and at the end of page 1 of the list there's the NVDI 5 update from NVDI 3/4 (named NVDI 5 Update 1) at EUR 40. Click on the "Bestellen" Button to the right to place it in the cart, then "Zur Kasse gehen" in the left column (below "Einkaufswagen"). Then you've got to register, but I haven't tested from there on.

With best regards
Ekkehard

Hi,

I own NVDI 4 and want to update to NVDI 5. your sytem wont let me
register, Please help me.

sorry, we do not sell NVDI any more. I don=92t know a way to get it.

Here's all the info:

Processor: Coldfire MCF5474, 266MHz, 400MIPS
RAM: DDR, 512MB Main- + 128MB Video- and special RAM on Board, Speed:
1GB/s
Flash: 8MB on Board for Operating Systems
Operating system: TOS3.06 for the beginning
Atari kompatible interface ports:
- TT/Falcon-IDE, ST/TT-Floppy
- TT-SCSI (but faster), ACSI
- ROM-Port: 2x2mm Connector
- Printer, ST/TT-seriel, Midi, ST-Sound over AC'97
- ST/TT/Falcon-Video
- Atari-Keyboard with Mouse

Other Ports:
- Ethernet 10/100, 1 Port
- USB 2.0 Host (ISP1563), 4 Ports

- Compact-Flash, 1 Port
- SD-Card, 1 Port
- AC'97 Stereo Codec with DMA-Sound Output and 48kHz Sampling Input
- Sound_Connectors: LineIn, LineOut, Mic (Mono); DVD/CD internal
- Coldari Video Modes about 2MegaPixel, true color
- PS2 Mouse/Keybord Port

Battery Powered (if desired)
PCI 33MHz direct Edge for passive backplane
Power controller with real time clock, PIC16F506
Extension socket: 60Pol (DSPI 8MHz, seriel sync or async about
33MBaud, 25Bit I/O about 133MHz, I2C-Bus)
Planed extensions in the future: Falcon DSP in the FPGA
Format: Card 90mm x 260mm x 20mm
Status: Wait of preorder (=80200.-- advence payment), needing 25 for
start project
Probability of realisation: 70%

Price for the Board: =80599.-- excl. VAT and shipping; =80357.-- left for
preordered boards

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the Most Common ST Disk Drive! And the case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

U>I own NVDI 4 and want to update to NVDI 5. your sytem wont let me
U>register, Please help me.

Have you tried http://www.calamus.net/order/ already, as has been suggested by Jim DeClercq? There you can get NVDI 5 new (near the end of the list). You might ask Ulf Dunkel if he sells updates, too.

Other than that, I'm out of ideas :-(

With best regards
Ekkehard

Hello,

Is there a debugger that runs under Aranym?
Is there a binary version of Aranym with internal debugger? (for windows)

Guillaume.

New in version 1.0  :  Separated info boxes for floppy and image file,
easier usage, better overview. Option to save compressed MSA images.
View option in ST file transfer dialog.

Hello,

Finally, I managed to make M_Player run under Aranym. The "dirt"
programming is back!

I plan to improve two importants points:
- the disassembling of an animation (to TGA and sound)
- the creation of an animation (the BATCH file is a bit hard for most
users, I try to make a clearer interface)

- the direct conversion only works under TOS with a very ... personal
system (M_PLAYER calls a second M_PLAYER!)

Well, for those of you who made long time ago some sequences with
CyberPaint (*.SEQ, *.DLT) with Lexicor (*.FLM) or digitized videos with
Video Master (*.FLM) this is the chance to view them again if you don't
own your original Atari anymore.
And with the disassembling and creating functions, you should be able to
convert them to a more modern format such as AVI or MOV.

So, you can test M_Player under Aranym, just download it from this page:

http://pagesperso-orange.fr/gtello/mplayere.htm

Guillaume.

Hi all--

I have a Mega ST2 which I used many years ago and decided it was time to ressurect it. When I powered it on nothing happened.

Could someone kindly any service manual resources to help determine the cause?

Thanks in advance

Try Best Electronics?

My first thought would be the power supply unit. I had one go out in my Falcon. If that's the problem, you could either buy a new one (very expensive - try Best Elec.) or if you're more mechanically inclined you could hack in a PC power supply (cheaper, but harder fix). Just be aware that the wire colors aren't exactly the same between the two. If I remember correctly (and I may not) the yellow and blue wires are the same voltage, but reverse polarity between the two. I didn't find this out until it was too late and had to replace a violently exploded transistor from my Falcon's sound system. Very exciting! Fortunately, that was the worst damage that was done.

Mike Freeman

Hard to top HDDriver. Commercial, but its still being developed/Supported
and Uwe is awesome. :)

I think the question was about the hardware.
For me the best solution is the one I can find. There are not too many HD for the ST... So, when you find one, get it!
On my first STE I have a 160Mb SCSI Apple drive (taken from a MAC) with an ACSI/SCSI interface (not Icd, not The link).
On the second one I have a Syquest 44Mb with the same kind of interface.

Those SCSI drives are faster than the original Megafile.

Guillaume.

Hello,

www.czuba-tech.com will be terminated in few days.

The new web site is www.powerphenix.com

It contains CT60, CTPCI and OLD projects (this last link will be active in few days).

PLEASE : CHECK all web pages you created to update... AND :
- REMOVE all www.czuba-tech.com links.
- REMOVE all reference to my name and replace by powerphenix.
  I do not want more to be matched by the search motors as private person.

Thanks for your attention.

I emailed Invers and got these 2 emails back

Robert:
I am sorry, but at the moment there are no NVDI 5 copies in stock
anymore. I will try and get new ones ...

the just got this one

Hi Robert.

I have reached the makers of NVDI and they informed me that the
relevant
Bitstream VectorScaler license has expired and cannot be renewed for
several reasons. Thus they cannot create new serial numbers for NVDI
for
legal reasons.

This said, I resume that NVDI is dead. Please try and get a legal
copy
```

from old Atari users who do no longer use it. Try and contact them in
several news groups.

Good luck.

Try a 40 ohm resistor between 12 volts and ground for a few seconds. Sometimes revives a stalled power supply. discoect from Mega first, and might work. These 20 year old switching power supplies sometimes get flakey.

I emailed Invers and got these 2 emails back

Robert:
I am sorry, but at the moment there are no NVDI 5 copies in stock
anymore. I will try and get new ones ...

the just got this one

Hi Robert.

I have reached the makers of NVDI and they informed me that the
relevant
Bitstream VectorScaler license has expired and cannot be renewed for
several reasons. Thus they cannot create new serial numbers for NVDI
for
legal reasons.

This said, I resume that NVDI is dead. Please try and get a legal
copy
from old Atari users who do no longer use it. Try and contact them in
several news groups.

Good luck.

Hello,

I was having MEGA problems on ST using ICD, that I switched to HDDriver. After that, no problems at all.

>Hi-->
>Which Hardrive solution works reliably with an ST system best an Atari
>Megafile or an ICD FAST or ???

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometime dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's more than 600, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by webmasters adding the HTML code

```
<CENTER>
<form action=3D"http://www.google.com/cse" id=3D"cse-search-box">
   <div>
     <input type=3D"hidden" name=3D"cx"

Hi,

A new 0.9.7beta+CVS ARAnyM version <http://aranym.org/> is here
in the *miniPack* <http://eureka.atari.org/miniPack.zip> thanks
to Philipp Donz=E9's build. It supports

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with both
Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy =3D)

Hi,

M_Player can now deal with long file names and lower case names too.
So it is more compatible with newer systems (Ext2 partitions... etc)

That's version 3.21:

http://pagesperso-orange.fr/gtello/mplayere.htm

ImageCopy will do it and I think Smurf & PhotoLine are others that will work.

Yes that is true. I picked another Lynksys wireless adapter, the LN-Gaming
adapter and it worked also.

That is true. You need a PC to setup the B abd N Lynksys adapter. However if
you do not have you SSID setup and you do not have a WEP password, the B-
gaming adapter will work right out of the box with no setup.

In that case, it will be insecure. Setting up a secure WLAN connection
*requires* you to use WPA and setup the keys on both ends.

Hmm, any chance they have a command line setup? Would be nice if you could
use an emulator to set it - thus breaking any reliance on Windows
whatsoever (personal committment of mine). :)

Hi Michael - that brings up a question. The hospital where I work at
maintains a wireless network, a "guest" account so that patients can log
into it from their rooms with a laptop. No password/keys are needed.

How do they secure that? There is a disclaimer at the first logon, saying
that basically everything that happens is the users responsibility. Guess
that covers it, huh? :)

But...going by what you and Edward have said, I should be able to use the
"B" device, via an EtherNEC, with my STacy, and logon to that guest
account. I've done it with my Linux laptop - no problems.

Thanks.

Whoah. They are still in business? I thought the French mag was the only
one left - the one I've been giving away on my BBS - and its a very small
mag - not large at all.

Thanks.

IIRC, they also produce it in English as well, but you have to get it
through 16/32 Systems.

Right, sorry for the confusion - thats what I meant, I get them from 16/32
- but its a small mag.

When you say 'small', exactly what size are you talking about?
Reader's Digest size?
Thanks

Something like that, maybe 5 x 8 in size... I just grabbed the Summer 2007 issue, it has 35 pages in it.

It is not secure at all - anyone can connect, and all data is transmitted unencrypted over the air, so anyone with a laptop can easily sniff everything. When using such a setup, you should make sure that critical data (like passwords you enter on some website) are encrypted by the client.

On a private setup, this is probably not what you want - anyone can connect to your access point and (ab)use your internet connection, and anyone has direct access to all your machines just like he plugged a cable directly into your network - and when you use protocols that do not encrypt the passwords, like ftp/telnet, you also broadcast those in cleartext to anyone listening.

cu
Michael

Interesting reading....

Can the EtherNEC, NETUS-Bee, or a similar device be bought now?

I have a nice STacy and a few Falcons that could use one or two of them.

If someone has a spare for sale/trade, then do get in touch with me, From
what I've read
here I would need the Linksys-B Adapter too.

I use my Atari's all the time, it would be nice to bring my Ataris Net stuff
I use up to speed
without going thru another system. 8-)

Also, if anyone has a spare VME Ethernet board for my Mega STE, I'd be
interested in
working out some sort of deal for it.

I can be reached at: phantomm@suddenlink.net

I'd like to start a list of Atari ST-Falcon Games, Applications and Utilities
that are considered Rare, and Hard to Find.

The purpose would be to try and salvage them if one could find 'em.
Anyone know a few to get the list started?

Greetings...

Would like to buy/trade for a ScreenEye, ScreenEye Plus and or Matrix?
Video Digitiser for an Atari Falcon 030.

Also, may be interested in a Expose' Digitiser as well.

I'd prefer a known working card, but would be interested in a non-working
one.
Doesn't matter if the card is OverSeas.

Send info to phantomm@suddenlink.net

Greetings,

Years ago, I remember Contests for the best Computer Animation, best
Computer
Audio/Music and etc. Where users of all brands of Computers entered their
work for a shot
at being the best.

Do these Contests still exist, and if so, where are some of the best ones to
get involved in?

Also, what is the latest thing in Computer Graphics and Animation if anyone
knows?

I and a few people I know enjoy using Atari ST-Falcon for graphics and
animation.
We would like to see whats considered to be the "in" thing and try to better
it.
Where would we go to find the best graphics and animation being done today?

Where can I find technical info for a beginner who wants to do some
USB projects for the Atari ST-Falcon?

A easy step by step USB project would be good for him to start with.
One that doesn't require coding from scratch. Or requires no software
at all. To get him started. Then he may learn enough to move on to more
advanced projects of his own making.

He would be interested in some sort of USB connector for the Falcon.
And if it would work on earlier Ataris then all the better.

Maybe using the cartridge port, or parallel port. How about the DSP port?

Could the enhanced Joystick ports be used for a USB Connector?

Any info is appreciated, send to phantomm@suddenlink.net

Hmmm...

Well I took your advice at went to Ebay. I found some software here that
they
have on there and listed it here with a better price.

Have Fun,

Coucou,

Here is my colored desktop under plain TOS:

http://pagesperso-orange.fr/gtello/colortt_e.htm

I started with the work of Noud van Kruysbergen in DEGADESK (that worked on a ST in ST High long time ago...) to add the ability of putting a desktop image on the TT.

I can swap from my 6 possible backgrounds using directly the menu entry of the GEM desktop.

Guillaume.

I like the content - there's some good STuff in there, time to time.

It's been awhile since I've seen a new issue though - have to check on that. I had been giving a 3 mag subscription away on my BBS, to one lucky caller each month, but for the last few months, it's been the same mags coming from Nick at 16/32. I'll have to e-mail him and see if he knows anything about their schedule.

Yes - I remember this has been done by simply connecting a second VME connector in parallel. Keep the connections as short as possible, and set both cards to different address & interrupt settings. For cards which require a big amount of memory space (like a graphics card), finding enough address spcce may be difficult in a MSTE, though.

As long as you are refering to complete games in the full-sized first-release box, amon others

"Nitro" by Psygnosis
"Magic Boy" by Blue Turtle
"Oids" by FTL

"Wanderer" by Pyramide
"Gauntlet" by U.S. Gold
"Brataccas" by Psygnosis
"Hunter" by Activision
"Sundog: Frozen Legacy" by FTL
"Monster Business" by Eclipse
"Traders" by Digital Integration

seem to be rather rare, as are supposedly several other titles esp. from very early and very late in the ST's commercial lifecycle.

Thorsten

Ok,

I have NITRO in a 3 game box set called MONSTER PACK Vol 1.
It includes Nitro, Shadow of the Beast 1, and Infestation. All original in excellent condition.

Also have Wanderer, Original Disk(s), manual in nice box.

And Sundog "Frozen Legacy Original Disks and Manual (no box).

These are for sale, btw. Send offers to me at phantomm@suddenlink.net

I think I have Oids, but will have to check for it.

I came across some older games, not sure if they are Rare though.

MudPies
StarQuake
BattleZone
Robotron: 2084
MACH 3

ok...not sure I quite understand how to do this... I've not done alot of VME
stuff on Atari.
However, today I installed a NOVA Graphics Card into the VME Bus of my
4meg, TOS 2.06, MegaSTE which also has a Vortex 386SX installed.

For the moment, I have it connected to a MAG 17inch SVGA.
I'm quite suprised at how Fast it is, even though I'm not running NVDI or
Warp 9
yet! Looking at pictures in a 24Bit color mode is really nice on the ole
MSTE!!

Michael, when you say "connecting a second VME connector in parallel" are
you
talking about the Factory Connection inside the MSTE/TT? Or do you mean
something
like a board with a long connection that a card plugs into with 2 additional
34 pin
connectors?

I have a couple of boards with the long connectors that a card such as a
graphics card
plugs into. Each board also has a pair of connectors with 34 pins for Ribbon
Cables?

I was wondering if I could somehow use the above board along with the Nova
setup so
that I can add another type of card?

If so, is there any type of Ethernet or other cards that are supported with
drivers that I could use
on such a setup for use with a Cable Modem for Fast Internet access with the
MSTE?

If not, and I can use the board, what other cards are available or were made
other than
graphics cards?

Any help with this is much appreciated.

     This could work on the Mega STE with TOS 2.06 and your NOVA Board!

> btw, is MPlayer still being updated?

     Yes but slowly and mostly for personal use.
     These days I'm trying to make something like a Aranym compatibility
using clean VDI calls to display the images in 24 bits or 32 bits modes.
This won't be an optimized way of using M_Player, but it could help...
As M_Player can disassemble videos (images or sounds) and re-assemble
videos. So using a fast PC+Aranym could do the job better.

     Guillaume.

USB is definitely not for beginners. And really, not for old Atari machines. I'm not saying that it is not possible, actually some things are already done. We have NET-USB adapter already made. Docs are available, as it went to open source project. What was the problem ? Lack of SW, drivers. So far, only mouse driver is made, and even it is not real USB, but PS2 mouse driver, as USB mouses usually use PS2 protocol.

Some notes: cartridge port is acceptable (NET-USB uses it). Joystick port is not good. Parallel port may serve, but is slow. Best would be DMA or direct ot CPU bus.

It does not matter *how* you connect the second connector, as long as you keep the connections short (a few cm max.).

cu
Michael

Barry, I might have an extra TOS 2.06 chip set - gimme a few days to look
for it - if I've got it, I'm not using it, so you can have it.

Hi again and again,

I go on working on the TOS3.06 desktop, I changed a bit the menu.
It looks like it's easy to do... But it requiered a long work
understanding how the AES does the thing.

http://pagesperso-orange.fr/gtello/colortt_e.htm

Guillaume.

Hi guys,

See http://stmagazine.org/

It seems there are less issues than it used to be, though I'm not a
subscriber, I read the latest issue was last summer.
Apparently, they don't have much contributors left.

Simon

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the Most Common ST Disk Drive! And the case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

LS

There is a new version of AHCC available. (see sig)

Changes:
     AHCC now detects and inhibits infinite recursions
          during macro expansion. (v3.b1 crashed)

     Fixes in relative path handling.
     More flexible handling of shel_find result.
     Built in macro __FILE__ changes '\' to '\\'.

Have fun.

Thanks for your work. I'll probably have a few remarks to tell you
about building my own software, if it's not disturbing your quietness.
I'm always so worried about miss-commenting the hard work of another
ATARI developer, because I'm one for so long. For 12 years now with
my Hades 60. I tested AHCC with <http://eureka.atari.org/miniPack.zip>
for the moment. Thanks for your good comments about it, and for ARAnyM.

Anyway, at first sight it look like a really good job, indeed.

Be sure I won't let the devels down, thanks to your support.

Best regards,

For those who already downloaded the last AHCC.

Please do it again.
There is a last minute fix and I forgot a few files.

Apologies for the inconvenience.

Hm, I am not sure what to think of this.

I am aware of the fact that compiler writing is a delicate job.
So I am prepared for the worst ;-)

> So I am prepared for the worst ;-)

I'm in the process of rebuilding my Milan. When it's done, you can expect
some bug-reports from me as well ;-) I have lots of code developed with
PureC that I can test.

It might be encouraging to know that I used AHCC for
compiling the Algol 68 interpreter of Marcel van der Veer

http://www.xs4all.nl/~jmvdveer/algol.html

resulting in a 600Kb binary that correctly ran
a few small Algol 68 programs.

So it shouldnt be that bad :-)

Greetings,

Looking to purchase or trade Atari hardware/software for the following...

TOS 2.06 2 chip set.
TOS 2.06 Switch board(s)
VideoShifter Chips.
Mega STE KeyBoard(s) Need good working condition.
Mega ST KeyBoard(s)   Need good working condition.

1040STFM working or non working.
Mega ST working or non working.
STacy working or non working.
Atari Falcons non working.
Atari Falcon working or non working CPU Upgrades, for example ...
(AfterBurner 040, Nemesis, Mighty Sonic).
Atari Falcon Co-Processors.

Will also consider other Atari Hardware upgrades/parts/etc.

E-mail me the details of what you have for sale/trade at:
phantomm@suddenlink.net

Thanks,

.

I admit it would be nice, but I do not think so. However I was able to access
my Cable modem's setup screen with my Hades060.

Go for the real Cisco devices (not the �Linksys part of Cisco�-thing).
These are configured via serial port (RS232), Telnet or SSH.

Somebody has done this before, probably, so I though I would ask first.

I want to run a serial link between a TT030 and a Stacy, and both of them
run some sort of TCP/IP link.

The complication here is that a TT030 has five serial ports, while other
things have just one. How does one set that up, using MiNTnet on the TT030
and STiNG on the Stacy?

If I figure this out before I am handed a working solution, I will of
course post it here, but I am hoping for the least work way of doing what
I need to do.

Jim

```

Bonsoir

Some fixes. Download on my homepage or directly in the folder
http://rajah.atari.org/files/
-> kkcmd14c_uk.zip
-> litchi11h_uk.zip

Common changes:
- trying to keep position inside window files list, after a dir or files manipulation
- better file selection if it was not yet selected (if no mouse movement, then selection and drag'n'drop, instead of grabbox for multi-selection)
- pop-ups sliders redraw problem, under XaAES: 1 pixel larger.

For Litchi:
- fixed redraw problem after selecting on file only with grabbox.

Merci � O.Landemarre et JF.Lemaire

Hi Jim,

I'm in the processing of doing something similar myself.
Using a STacy, MSTE, Falcon.

I had some sucess with the MIDI ports,
The Midi software I was using was a older shareware program and all you need
is MIDI cables. I forget the name at the moment as I was trying a bunch of
MIDI
software out at the time. But I think it on the UMICH site.
MidiNet, MidiCom, something like that. I had no trouble with transfering
text in
real time. But ran into a problem with file transfer, I couldn't access the
drive
partitions on one machine from the other. I think I know what I did wrong,
and
will test it before I will go into it. But I think it was a simple mistake.
The program I used Runs as a ACC. and there is only 2 or 3 files in all.

If I understand what you are trying to do, it may work to use the MIDI ports
for a link
between the computers and then use STing to connect to the Net.

The problem with doing it all with Serial ports would be getting the TT to

use two serial ports at the same time. If you want it all working at the same time.
I've a MSTE so it's somewhat similar situation as the TT.
I use STing on all my Ataris, except for STalker for BBS related.

One option may be to use a null modem link between the STacy and the TT using something like STalker while connected to the Net with STing on the TT with another port. I've not tried this myself yet, but headed that way.

The thing about MIDI however is that you can in theroy connect around 250+ Ataris together at the same time. But may be to slow for your needs. Some say MIDI transfer is about like a floppy drive. However I have read that it's faster than that, so I really don't know about how fast it is with file transfer. I would think drive speed would come into play in either case.

I've not fully explored what STing can do, there is a STing Server. And STing has drivers for all the ports if I'm not mistaken. STing may actually be able to do what you want all by it's self. I've never gotten into using it with 2-3 ataris yet. Another project to look into. 8-)

If you get good results, do let me know and I'll do the same soon as I have time to work on it. Been doing some hardware work lately.

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS set as laid out on the MotherBoard. The important feature is this. The built-in floppy must be the Chinon. You can tell, the drive has an eject button centered under the floppy slot. The button is wide, short height & slanted on both the left & right side. This Chinon Drive is the Most Common ST Disk Drive! And the case needs to be unaltered, not cut up to replace a drive with an incompatible eject button. Please direct All replies via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974. I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the Mega to come that way from the factory. I don't trust most other peoples tech work. I'd rather have the RAM put in at the Factory.

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!

Paul Quirk has created a new web forum for users of classic computers. Go to http://retro-link.com to see the opening message or to http://retro-link.com/smf/ to browse. To sign up, send an e-mail to paul(at)retro-link.com

According to Paul, Retro-link.com will be different. This is what he says --

"There will be a new site for enthusiasts of retro computers... It will include other retro computer systems, as demand warrants. That site will be called retro-link. The domain, which has been registered, is at retro-link.com. I intend to have it ready and open to the public this weekend.

The theme will be a mature, friendly, harassment-free place where people can contribute as much or as little as they wish. It will be a positive place where people can post questions that have been asked a hundred times without being insulted for doing so. It will be less of a repository of information, and more of a social place to gather and discuss...

The forum seems to be all-encompassing in its eight

categories -- General, 8-bit Commodores, Amiga, Atari,
Apple, Tandy/TRS-80, Vintage PC, and Others.

Truly,
Robert Bernardo

Yes cool place, why not...

But won't we miss some informations about the Atari ST if the forums
multiply themselves?

I hope that important informations will be "cross-posted" on both forums..!

Just to make sure about this, can these still be
pre-ordered - or is ordering closed at this point?

Thanks.

Hi again,

I made some changes:

- colored menu bar
- custom system font (from a FNT file)
- custom sound at start (from a sound file)

http://pagesperso-orange.fr/gtello/colortt_e.htm

I think I'll stop here... for now!

Guillaume.

Just wanted to say thanks to everyone who bought my Atari 8-bit and Atari
ST-Falcon
Computers and related software, hardware, books and mags.

Just about everything was sold and what didn't was donated.

I do not have anything to do with Atari Computers anymore.

The Auction is over, so please do not e-mail about Atari related stuff any
more.

Thanks and best of luck.
Barry

On a very serious note, years ago I sold all of my atari gear and I have
since been attempting to acquire all of the things that I lost and then
some. I am the cheapest man alive but I'll buy every falcon accessory
and coldfire machine that comes along ;) I'm hooked for life I guess.
Seriously getting rid of that gear was one of the worst decisions I've
ever made.
Thanks,
Mark

Hello,

I have updated my TT page with a diagram of my installation. You'll find
it on the right of that page...

http://pagesperso-orange.fr/gtello/tt_e.htm

I am preparing a software diagram of my installation telling what
program does what action from the AUTO folder to the desktop.

Guillaume.

I put this new diagram on the page (in the first third on the right),
it details my BOOT sequence on the TT with various systems installed
(TOS, MultiTOS, MyAES, MagiC, Geneva..)

http://pagesperso-orange.fr/gtello/tt_e.htm

Guillaume.

LS

There is a new version available on my home page (see sig).

Changes since v3.b2:

Fixed a omission while expanding.
(K&R 2nd A12.3 dont replace at rescan.)
My solution of recursive macro expension yielded
false positives. So it is removed.
It might be necessary to completely redesign the
expansion mechanisms. The current implementation is a
Sozobon legacy. AHCC should work fine when you remove
all recursive definitions and usage in your sources.

A memory bug is killed.
A few minor bugs fixed.

The Pure C offsetof macro couldn't work in #if's
(again, Sozobon legacy).
Implemented __offsetof__ operator.

If your programs use offsetof in a #if conditional
and you do not use the stddef.h of AHCC,
you must copy the implementation of offsetof from stddef.h
in folder AINCLUDE to your own stddef.h.

Handling of # (stringify) and ## (token catenation)
same as Pure C (Not entirely ANSI).

Atari JoySticks are standard! They even worked on Non-Ataris! They should work
fine on the Falcon! Also, if you have a FlashBack 2, the JoySticks work just

like the Atari 2600 JoySticks! Thanx! =-=Ben=-=

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!
